China: GDP forecasts cut on trade war

The ongoing trade war will affect future GDP directly via the manufacturing and logistics services sectors. Though the government will provide support via fiscal and monetary policies, it is inevitable that industrial production will slow, which could hurt wage growth and consumption

Contents

- As expected GDP rose 6.7% YoY
- Manufacturing slowed - even high tech
- Investment growth stabilised
- Retail sales grew faster
- Future growth relies on supportive policies
- Revising GDP growth

As expected GDP rose 6.7% YoY

GDP grew 6.7% YoY in 2Q, slightly lower than 6.8% in 1Q. Consumption was still the growth engine, contributing 78.5% of economic growth in 1H18, followed by investment (31.4%) then net exports (-9.9%).

Manufacturing slowed - even high tech

Industrial production slowed to 6.0% YoY in June, from 6.8% in May. We expect manufacturing in export sectors will slow further as the trade war begins to materially impact the economy.

Even robot production grew just 7.2% YoY in June, compared to 23% YoY YTD. This is a significant drop and could be a reflection of over cautious export manufacturers.

Exporters are cautious on investment even high-tech equipment

Investment growth stabilised

Investment growth remained at 6.0% YoY in June. Infrastructure investment continued to fall as financing tightened.

Property investment (9.7% YoY) emerged as the main pillar to support headline investment, while investment in electronics (19.7% YoY YTD) also registered traction. Entertainment-related investment, anchored by strong domestic demand, also grew quickly (17.5% YoY YTD).

Real estate will continue to be the support of fixed asset investments in this trade war

Retail sales grew faster

Retail sales grew faster at 9.0% YoY in June up from 8.5% in May. This shows that consumption is slower to react to the trade war compared to the manufacturing sector.

The most eye-catching figure is that retail sales of vehicles shrank 7% YoY. Don't over-read this data as consumers are waiting for tariff cuts of non-US vehicles to be reflected in auto prices.

Don't panic about negative vehicle sales, consumers are just waiting for a price cut

Future growth relies on supportive policies

Consumption growth depends on salary rises, which in turn depend on business profits. The ongoing trade war will limit profits of exporters, as well as those of supply chain linked participants, including shipping and ports. Though SOEs will be able to absorb labour from the private sector in hard times, wage growth will still likely slow.

We believe that fiscal spending on high-tech R&D will increase quickly to offset the loss in investment from exporters. Similarly, reform of salary taxes could boost consumption.

Required reserve ratio (RRR) cuts for SMEs will probably continue every quarter. Borrowing costs for SMEs will need to be lower to survive the trade war.

If the trade war does hit the economy hard, then the government will substantially increase investment, especially in high-tech sectors. This will help stabilise economic growth and job security to stave off social unrest.

In this instance, the central bank will put financial deleveraging aside to focus on growth.

Revising GDP growth

We are revising our GDP growth forecast to 6.6% in 3Q and 6.5% in 4Q from 6.7%, as the drag from trade should be partially offset by policy support.
