

Covid-19 could leave a legacy of EM debt distress

Challenges are coming for those countries which have overly relied on commodity exports and tourism, resulting in weaker fiscal revenues and current account balances

Aside from significant socioeconomic challenges and the negative economic impact, many emerging markets countries have relied on portfolio flows. With the onset of the crisis, inflows we have seen over most of 2019 suddenly turned into hefty outflows, with investors having removed US\$83bn up to 23 March according to the IMF. Further challenges come for those countries that have overly relied on commodity exports and tourism, resulting in weaker fiscal revenues and current account balances.

Why have concerns on public debt sustainability and external vulnerabilities risen?

The policy space to support the economy differs hugely across emerging markets and it is here that we also look at public debt sustainability. Notably, we expect a spike in public debt ratios as many countries will run higher fiscal deficits (lower revenues and higher spending) while growth is coming in much lower. There are two additional pressure points worth mentioning: First, financing costs are increasing to reflect a higher risk premium, stretching budgets further. Second, many emerging market governments have borrowed in FX. With EM currencies having come under

pressure recently (-9% based on J.P. Morgan EMCI), the local currency value of FX-debt outstanding and debt service is increasing.

Where do we see signs of sovereign debt distress?

Since the start of the year, the amount of EM US\$-denominated bonds trading above 10% yield has more than doubled from around US\$90bn (10% of bonds outstanding) at the start of the year to currently US\$190bn (21%). Many of those have been hit hard by the commodity price shock while for others, the current crisis exacerbates already weak public debt sustainability. For now, concerns are concentrated around frontier markets rather than larger emerging markets economies. Based on market pricing, we find signs of debt distress for Angola, Argentina, Ecuador, Gabon, Lebanon, Sri Lanka, Surinam, Tajikistan and Zambia as well as to a lesser extent for Ghana, Iraq, Nigeria and Oman.

Where could relief come from?

The IMF and World Bank have set up emergency funding programmes of US\$50bn and US\$12bn, respectively, with more on the way. Both institutions have also issued a joint statement calling for debt payment suspensions from bilateral creditors for World Bank IDA countries with an invitation to G20 leaders to make assessments and an endorsement sought by the 16/17 April virtual Spring Meetings. On the one hand, multilateral support and debt relief could ease the pressure for some sovereigns while on the other hand, there is a risk that private sector investors will be asked to bear a share of the burden.

Leaving debt distresses aside, what else is important to watch?

Over the last week, rating downgrades have come through, mainly affecting commodity producers as fiscal and external vulnerabilities increase. However, we have also found a large divergence in those, with some Middle Eastern and CIS sovereigns boasting strong buffers (Azerbaijan, Kazakhstan, Kuwait, Qatar, Russia, Saudi Arabia and the UAE) while others are more vulnerable (including Angola, Nigeria and Oman). Among the larger emerging market economies, Mexico and South Africa were also downgraded mainly on lower growth prospects in the former and public debt sustainability concerns in the latter.
