

## Four crucial questions for Eurozone leaders to answer

European leaders made little progress in answering profound questions about the Eurozone's future at their June summit. But ensuring economic sustainability should be a priority, says ING's Chief Economist, Mark Cliffe

German Chancellor Angela Merkel, left, and French President Emmanuel Macron, right, welcome the President of the European Commission Jean-Claude Juncker. June 2018

### The future of Europe

Although some progress has been made over the years, we're potentially only one recession away from the fragmentation of the Eurozone. Building up Europe's resilience to future economic setbacks should be at the top of the agenda for Europe's leaders. Prompted by a recent ING-sponsored [Future Europe conference](#), where politicians and policy-makers tackled some of the pressing issues, here are four questions that Eurozone leaders should be giving answers to.

#### 1 Is some form of fiscal capacity necessary to preserve the Economic and Monetary Union?

Greater fiscal capacity – an expanded budget – is not essential but it would be very helpful. Since

reform, and therefore structural flexibility could take years to have a big enough effect, developing a substantial countercyclical fiscal capacity would be timely. Governments would have greater room to fight downturns by temporarily relaxing fiscal policy. Agreement on this would also have a powerful signalling effect. By increasing the confidence in the sustainability of European Economic and Monetary Union (EMU), it might increase investment and reduce the risk of speculative attacks on it.

**But size matters:** the precise *form* of the fiscal capacity is less important than the strength and scale of the political commitment to it. This is important to give investors' confidence in the sustainability of the Eurozone. As to what type of fiscal capacity is envisaged, there are a number of ideas that are being considered:

1. Prioritising investment is a good idea in principle, but the efficiency in implementation in the past has been questionable.
2. An unemployment insurance fund is another worthwhile idea because it has a redistributive quality that is both economically and politically appealing.
3. A euro-wide safe asset would not only spread risk but also *reduce* risk by making it less likely that self-fulfilling market panics about debt sustainability break out in the first place.

## Divergence in real incomes remains an issue

## 2 How can we balance the Eurozone's need for both financial discipline and risk-sharing?

One way is to make the fiscal rules need to be smarter. A key aspect is to make them more countercyclical. The original rules and the conditionality of the European Stability Mechanism (ESM) have forced members in trouble to tighten fiscal policy in the midst of a severe downturn. This pro-cyclicality has been both destructive and divisive. The rules need to more clearly

---

*Smarter and fairer rules would be easier to enforce*

---

and consistently differentiate between current and investment spending, and headline and cyclically-adjusted deficits. Another way is to make the rules more symmetrical; surpluses can be excessive too. 'Beggars thy neighbour' policies, such as big and persistent current account surpluses, make it harder for other members to grow and reduce their deficits. Rules that are acknowledged as both smarter and fairer would be easier to enforce.

Mark Cliffe leads the New Horizons Hub

### 3 Is a lack of trust, given current political gridlock, a core problem?

Trust is a big part of the problem. Without it, unity is undermined. Lack of trust then leads people to rely more heavily on rules, but also lose confidence that others will obey them. It also helps to explain why there is little appetite for a **'transfer union'**, involving large-scale fiscal transfers between member states.

---

#### *Lack of trust also undermines trade and investment*

---

This reflects both a lack of trust: that transfers will be spent wisely, and a lack of solidarity: that the rich are reluctant to support the poor. Over the past decade, in the wake of the financial crisis, the likelihood of transfer union has fallen further. This has fuelled, and been fuelled by rising populism and nationalism. In economic terms, lack of trust also undermines trade and investment.

But it's not just about trust: there also has to be a common understanding of the problem. There is a clear divide between those who believe the Eurozone's problems lie more in the supply-side and institutional framework, with those who point to the lack of activism in demand management and burden sharing. Moreover, widening income divides across the Eurozone have made the EU and EMU convenient scapegoats for domestic politicians.

### 4 Has the goal of real economic convergence been dropped?

Formally, the EU is still committed to promoting real economic growth and convergence. Last

year's Rome Declaration by EU leaders stated:

*"We...pledge to work towards...a Union promoting sustained and sustainable growth, through investment, structural reforms and working towards completing the Economic and Monetary Union; a Union where economies converge."*

However, while the formal commitment to convergence remains, in practice, we have the following:

1. Politicians have failed to deliver, most critically in the case of Italy. Over the last 18 years, real incomes per head in Italy have fallen by 28% compared with Germany.
2. Post-crisis antagonisms and the rise of populism have undermined the strength of this commitment. In this atmosphere, moves to increase convergence will be harder to deliver.
3. It is hard to discern a concerted effort to deliver it in the future, whether through domestic economic reforms or larger scale fiscal transfers.

At the Future Europe conference, there was a general consensus that given the current relatively benign economic conditions, now would be a good time to act to speed up efforts to build the Eurozone's resilience to future economic downturns. But as we've seen many times before, politicians' ability to delay addressing fundamental questions about reform to ensure future economic stability is well-known. If they're not very careful, that could be their and the Eurozone's, undoing.
