France: Shifting into higher gear

The picture has changed dramatically in France in just a year. With the highest confidence levels in a decade, it's hard to ignore the positive effects of the reform atmosphere which we expect to continue in 2018

Source: Shutterstock

There is no alternative

Back in the summer of 2017, the polls were suggesting an unconvincing start for President Emmanuel Macron and his government. His approval rating has plummeted, and in August we were among those who thought they could hardly go any lower. Only Mr Macron's base looked satisfied with his first steps, but five months later, all of that has become history.

An IPSOS poll indicated in January 2018 a 53% approval rating for the President and almost 60% for Prime Minister Edouard Philippe. Part of it is due to the disarray of the opposition in polls, and another is the lack of stability at a low level on the right. President Macron seems to leave no space for an alternative. His first successes on the Labour Law and the 'moralisation law', which didn't trigger the feared street opposition, give a sense something is finally happening.

This should continue, with expected 2018 reforms to ease businesses' life cycles from creation to transmission. The Government should also start spending its 50bn euro investment plan, which also entails new employment schemes for the unemployed. On top of that, the Government will have to take risks on two politically sensitive reforms: the Immigration Law and Constitutional

Reform, which aims to lower the number of MPs and limit the number of offices they can hold. President Macron is therefore likely again to be all over the place in 2018, showing France that there is no alternative.

One could note that the Philippe Government does not look keen on austerity as the bulk of the 80bn euro of spending cuts scheduled for the next five years have been pushed back to after 2020. If the target is still to reduce public spending from 55% to 51.1% of GDP between 2016 and 2022, delaying the process could bring the deficit to GDP ratio above 3% in 2020, although stronger growth will help the consolidation of public finances.

2.0% Expected 2018 GDP growth

Better than expected

The highest since 2011

High business confidence will increase support for reforms

If there is one supporter of further reforms in France, it is probably the strong economic context, which is due both to the reform momentum and the high-cycle dynamism of the rest of the Eurozone. So far, the high confidence level has been broadly spread across sectors and suggest that the domestic economy should continue to grow strongly in 2018.

In the manufacturing sector, activity is set for a 2.4% rebound in 2017 after a paltry 0.4% YoY in 2016. As activity started 2018 at the same level as in October 2008, there is room for further recovery. With confidence indicators at a ten-year high, we expect 2018 manufacturing growth to reach 4%. Most companies in the manufacturing sector have remained upbeat about the general economic outlook since October and order books were still at their highest levels of the last ten years in December.

High confidence is spread across different sectors

Prospects are just as bright in the building sector where confidence also reached a high point at the end of the year, as expected activity is on the rise. Low-interest rates and a recovering housing market is essential for this sector which has been in recovery mode for the last three years. The December survey showed that hiring intentions remain high in building activities.

In the service sector, the rise in confidence looks more sustainable than in early 2017 as it is supported by the highest confidence level in the general outlook in years. Hiring intentions in services recovered in December to their high mark of last April which, together with similar signs from the building sector, is great news for the job market. Finally, even the retail sector gave signs of a revival of its hiring intentions as this component of the survey was above zero for the first time since 2012.

Expect further improvements to the labour market

But as we all know, it takes time to translate these good intentions into higher employment growth.

The French recovery started at a slow pace in 2014, boosting private employment growth only very slowly. It took three years to go from 0.0% growth on average to 1.4% YoY in 2017 (9 first months).

This rhythm is, however, still too low to trigger a fast decline in unemployment. French unemployment was still at 9.4% in 3Q17, higher than at the beginning of the year. An explanation is that 72.4% (on average) of unemployed people who were on one of President Hollande's subsidised job schemes or training did not find a job after that period and they are now flowing back into the unemployment statistics. Over the first ten months of 2017, this amounted to 65thousand, which explains why the unemployed population has increased by 16-thousand so far in 2017 after the 113-thousand decline in 2016, despite the acceleration of the recovery in the second half of this year.

That said, with GDP growth accelerating towards 2% in 2018 and supportive labour market reforms, employment growth should accelerate further in the second half of this year. This should allow for unemployment to decrease to 9% at the end of the year.

Improvements in the service sector are key to support employment growth

Domestic demand remains strong

Domestic demand growth was back at its mid-2016 level in the third quarter. The difference is that this year's growth is more balanced between investments and consumption: contribution from investments to GDP growth was 0.9pp in the third quarter, its highest level since 2010. Private consumption contributed the same. Corporate investments are particularly dynamic given that higher activity levels are pushing up capacity utilisation which is driving corporate investments. Moreover, under Macron, the corporate tax rate will be cut from 33% to 25%. In 2016, the growth contribution of business investment was almost entirely due to fiscal measures. The effect was short-lived. This time it is driven by demand, which is why we expect the rebound to be sustained

in 2018 and 2019 where we expect growth of 5% and 4.2% respectively, after 4.4% this year. Together with strong households' investments (still backed by low-interest rates and the prospect of housing tax cuts), this should bring investment growth from 3.6% in 2017 to 3.9% this year.

Private consumption should also continue to recover as consumer confidence will benefit from declining unemployment and tax reforms. While the Hollande era was often synonymous with higher taxes in people's mind (although this is not true on average), PM Philippe has been avoiding that reputational mistake. If his Government were criticized at first as "*the Government of the rich*", the fact is that purchasing power among workers should rise in 2018, while a flat 30% tax on financial income has consolidated a number of schemes. We expect private consumption growth to catch up to its 2016 level in 2018 (2.2%) after 2017's blip (at 1.2% only).

Investments posted their strongest contribution to GDP growth in 10 years

Demand should ensure record growth in 2018 and 2019

Growth will therefore continue to be mainly based on domestic demand. So far, the negative contribution of net exports in 2017 has been compensated by inventory effects but it will nevertheless be -0.6pp, somewhat less negative than in 2016 (-0.8pp). We expect export growth to recover in 2017, at a healthy 3.4%. However, the recovery in private consumption and investment goods' demand will probably be quicker, leaving negative external trade contributions for 2018 and 2019.

All in all, the picture has changed dramatically in France in one year

The economic recovery is shifting into higher gear, backed by the highest confidence levels of the last ten years. It is hard not to recognise the positive effects of the reform atmosphere the Philippe Government has succeeded to install. Even if most measures will not take effect before some months, expectations can be built on stronger ground. We expect reforms to continue in 2018,

which should help GDP to reach 2.0% this year. With a popular PM and a weak opposition, it seems the path to reform hasn't been this clear since 2007, an opportunity that President Macron certainly intends to seize.

	2016	2017F	2018F	2019F	
GDP	1.1%	1.8%	2.0%	1.9%	
Private consumption	2.1%	1.2%	2.2%	2.0%	
Investment	2.7%	3.6%	3.9%	3.5%	
Government consumption	1.2%	1.5%	1.8%	1.8%	
Net trade contribution	-0.8%	-0.6%	-0.5%	-0.6%	
Headline CPI	0.2%	1.0%	1.2%	1.5%	
Unemployment rate	10.0	9.6	9.1	8.5	
Budget balance as % of GDP	-3.4	-2.9	-2.9	-3.1	
Government debt as % of GDP	96.5	97	98	98
