Singapore: Manufacturing slows in August, again

As manufacturing slows down (again), we are reviewing our 3.3% forecast for third-quarter GDP growth for a downgrade. Couple this with steady core inflation under 2%, this should put to rest expectations of central bank tightening in October

Contents

- Main drags were electronics and pharma
- Slower manufacturing points to slower GDP growth
- No more policy tightening in October

The third consecutive month of a slowdown in manufacturing output in August suggests Singapore's GDP growth is poised for another quarterly slowdown in 3Q18. We think it'll drag growth under 3% in 3Q18 from 3.9% in 2Q18.

This underpins our view for the central bank carrying forward with the tweaking it made to the S\$-NEER policy band in the April meeting – a move to 'modest and gradual' appreciation of the trade-weighted exchange rate index – in October, without changing the slope, the width, or the mid-point of the band. We expect spot USD/SGD rate to trade around its current level, 1.37, through the end of the year.

3.3% August manufacturing growth

Lower than expected

Main drags were electronics and pharma

August manufacturing surprised on the downside with 3.3% year on year growth, undershooting the consensus estimate of 4.7%.

The slowdown from a 6.7% YoY growth in July, which was revised up from 6.0% initial estimate, was pretty much consistent across most sectors. In a continued clawback of an outsized 4.5% month-on-month (seasonally adjusted) bounce in June, August's 2% MoM decline followed the 1.2% decline in July. With over 40% combined weight in the total, electronics and pharma were the main drags on the headline growth in August.

Slower manufacturing points to slower GDP growth

On a monthly basis, September is a weak growth month. Assuming a monthly manufacturing change, in September, the average rate over the last three years, quarterly growth will have more

than halved to 4.7% YoY in 3Q18 from 10.6% in 2Q. This will certainly be associated with a slowdown in GDP growth.

As for other GDP components, construction output has contracted by around 5% YoY in the last three quarters and services growth has started to taper off in 2Q after peaking at 4% in 1Q and both trends have prevailed in the current quarter. We see this nudging GDP growth below 3% in 3Q from 3.9% in 2Q, which is why we are looking to downgrade our current forecast of 3.3% GDP growth in 3Q. The latest Bloomberg consensus estimate is 2.2%.

Manufacturing drives GDP growth

No more policy tightening in October

The central bank will release an advance estimate of 3Q GDP sometime during 8-12 October, and the central bank's policy statement is due around the same time. Slower GDP growth together, with steady core inflation under 2%, should put to rest expectations of a further policy tightening at the upcoming meeting.

The central bank shifted the policy from neutral to tightening at the last meeting in April – a move from zero percent Singapore dollar trade-weighted exchange rate (S\$-NEER) policy band appreciation to a 'modest and gradual' appreciation path (see figure).

We expect no change to the slope, the width, or the level of the S\$-NEER band from the prevailing level. As one of the better performing currencies since April, USD/SGD peaked at 1.38 in August and has since retraced to 1.37 currently.

We expect the pair to trade roughly close to current level through the end of the year.
