

The Bank of England's road to August in six charts

Will the UK economy emerge from the depths of the worst quarter of growth since 2012? That's the question Bank of England officials will be looking to answer between now and the August meeting

Source: Bank of England

Markets may be underestimating rate hike risks - but it all depends on the data

After the May Bank of England meeting (BoE), markets remained unconvinced we'll see a rate hike this year. [As we noted at the time](#), we think this looks like a bit of an overreaction based on what policymakers have been hinting over recent months. With wage growth on the rise, the chances of an August rate hike might be underestimated, and we still narrowly think a rate hike is more likely than not over the summer.

But this is certainly not a done deal. The high street is still having a particularly tough time, and contrary to the Bank's statement last week, suggests more than just snow prompted at least some of the first quarter lull.

Either way, whatever the Bank decides to do in August will depend heavily on economic

data between now and then. With 78 days until the August meeting, here's a round-up of some of the numbers that policymakers will be keeping an eye on, and how we think they'll move.

Inflation

Core CPI has fallen quite sharply over the past few months, and we think it could be back at 2% in time for the Bank's August meeting. Prices have largely adjusted to the pound's post-Brexit fall, and the rate of pass-through is fading. Headline inflation will keep a touch higher by rising fuel costs, but the overall picture of easing consumer price pressure in principle takes some of the heat off policymakers in the near-term.

Wage growth

But where inflation has been more lacking, wage growth has continued to outperform. Pay is now rising at the fastest rate in over two years, and Bank Agents are suggesting that this could be the best year for pay settlements since the crisis. Admittedly it is still early days. A portion of these gains is related to the higher living wage level, while weakness in the first quarter of 2017 has been flattering the year-on-year rates of wage growth. This latter point means we've probably hit a short-term peak in wage growth with base effects set to kick in.

But even so, the momentum remains solid (albeit a little slower than three or four months ago), and we don't expect the data before August to change policymaker's minds that the overall direction is upwards. Remember that optimism on wage growth is central to the Bank's rate hike rationale.

Consumer confidence

With wage growth no longer falling short of the cost of living, consumers might have been expected to up their spending plans. So far, this hasn't been the case.

Confidence has recovered off December's low but remains depressed, perhaps because real incomes are still hardly rising (even if they are no longer falling). But digging deeper into the numbers reveals that it's the economic situation, rather than personal finances, that is a great worry to households. Assuming this is related to slower growth and greater economic uncertainty – both of which look set to persist – then we think an imminent recovery in confidence is unlikely.

Borrowing

For some Bank of England rate-setters, we suspect the dramatic fall in borrowing seen in March was a key reason for wanting to remain on hold in May. The sharp slowdown in the amount of consumer credit supplied to just £300m in March coincided with a rapid tightening in credit availability by banks. In one sense, this is a positive development for the BoE, who had been warning about the risks of unsustainable borrowing. But given that much of the consumer spending that has happened over the past couple of years has been debt-driven, a sudden drop-off in lending could see the economy suffer more heavily over coming months.

Admittedly this could all turn out to be a blip – the reasons for the sudden demise remain unclear. But we think policymakers will be paying particularly close attention to this story in the run-up to August.

Growth and spending

Was the first quarter slowdown simply a temporary dip? This is essentially the question that prospects of a summer rate hike depend upon. The BoE's view is that the decline in growth is unlikely to last, and in fact that the particularly weak GDP figure will probably get revised upwards.

It certainly appears likely that some of the dip was down to the snow. Construction on its own knocked 0.2ppts off first-quarter growth, which is unusually large for a sector that only makes up 6% of the overall economy. Assuming the PMIs and importantly, second quarter growth bounces back, we suspect the Bank may feel comfortable enough to hike rates in August.

That said, a lot still depends on the high street. Pressured real incomes, falling borrowing and depressed confidence, have only added to retailer's woes over recent months. Shop owners have faced the 'perfect storm' of lower demand, higher minimum wage costs and rising business rates, and by some measures, the first quarter was the worst three months since the crisis.

Many retailers have become highly leveraged in the post-crisis years, so if we were to see an increased number of big names entering difficulties over the next couple of months, the Bank might well judge a rate hike to be one headwind too many for the sector.

Brexit

With under six months to go until Brexit talks conclude in October (allowing time to ratify the withdrawal agreement), time is running out. Talks are currently centred on resolving the Irish border conundrum, and so far UK ministers remain divided on which customs model to pursue.

Admittedly, we doubt that the Brexit headlines over the next few weeks will make much of a difference to the odds of a summer rate rise. Having said that, policymakers will be aware that it could get increasingly challenging to hike rates later this year as Brexit noise increases before the UK formally leaves the EU in 2019. Depending on how the economy performs before August, policymakers may want to capitalise while they still can.

The full timeline: What we'll be watching before August

Date	Event/data release	Date	Event/data release
23 May	April Inflation (Core CPI)	29 June	1Q F GDP (Second revision)
24 May	April Retail Sales	02 July	June Markit UK PMI Manufacturing
25 May	March Index of Services	04 July	June Markit/CIPS UK Services PMI
25 May	1Q GDP (First revision)	10 July	June BRC Retail Sales
31 May	May GfK Consumer Confidence	10 July	May Trade balance
31 May	April Consumer Credit	10 July	May Industrial Production
01 June	May Markit UK PMI Manufacturing	10 July	May Construction Output
05 June	May BRC Retail Sales	10 July	First monthly GDP estimate
05 June	May Markit/CIPS UK Services PMI	12 July	June RICS House Price Balance
11 June	April Trade balance	12 July	BoE Credit Conditions Survey
11 June	April Industrial Production	17 July	May Average weekly earnings
11 June	April Construction Output	17 July	May Employment Change (3M/3M)
12 June	April Average weekly earnings	18 July	June Inflation (Core CPI)
12 June	April Employment Change (3M/3M)	19 July	June Retail Sales
13 June	May Inflation (Core CPI)	26 July	May Index of Services
14 June	May RICS House Price Balance	26 July	2Q GDP (Initial)
14 June	May Retail Sales	30 July	June Consumer Credit
21 June	Bank of England Bank Rate	31 July	July GfK Consumer Confidence
29 June	June GfK Consumer Confidence	01 August	July Markit UK PMI Manufacturing SA
29 June	May Consumer Credit	02 August	Bank of England Bank Rate
29 June	April Index of Services
