Opinion | 28 November 2019

Asian data splurge

Much of the US may tack on an extra day's vacation after yesterday's Thanksgiving, but that won't stop Asia from pouring out data today on everything from Korean policy rates to Indian GDP

Source: Shutterstock

It starts here

It doesn't look terribly good, but I think there are many reasons not to be too downbeat about the Korean production data just released. The headlines are a 1.7% MoM decline (seasonally adjusted) and a 2.5% year-on-year decline. Most of this is concentrated in the manufacturing sector, which was down 1.5% MoM. More details about other sectors, services, and construction are shown [in the linked statistical summary from Statistics Korea](#).

Interpreting year-on-year figures where the 12M history contains the peak in overexuberance of production, followed by a massive slump, is exceedingly tricky. Manufacturing is usually reasonably strong leading up to October ahead of the gift-giving season in the West. It then usually drops away. If historic seasonal patterns repeat, we could see the level of production ebb in the coming months, but the year-on-year rates could improve. That is going to be even harder to interpret from a policy perspective.

BoK - nothing expected

Our base case on the Bank of Korea (BoK) meeting today is that there will be no change to the 1.25% 7-day repo policy rate. Although it requires a bit of imagination, we think, as do some of the

BoK's board members, that the economy is beginning to turn the corner. Some (two of seven) of them dissented at the last rate cut decision for this reason, as well as worrying about the impact of financial distortions. The dissenters saw policy rates as easy enough last time. I don't think anything has changed materially on the downside to merit a change in view from that meeting. So nothing from the BoK today, and in all likelihood, unless the trade war re-escalates (not our base case) no more easing in this rate cycle.

Japan industrial production softer

Like the Korean figures, the Japanese industrial production numbers for October look weaker (-4.2%MoM and -7.4%YoY). But for the same reasons as Korea, I'm not rushing to draw concrete conclusions about this. As well as the similar peak and slump characteristics that render the year-on-year comparison largely meaningless, the impact of the consumption tax hike on activity in September/October also means we can't really read anything into the month on month figures either. Trying to read anything into the non-seasonally adjusted underlying series is like staring at a kaleidoscope - it doesn't take long before it hurts your eyes. So I'm passing no judgement on this one too. it may be a few months before we can say anything sensible about Japan's data.

Meanwhile, Tokyo's inflation has come in at 0.8%YoY, up from 0.4% in October, which should set up the November national inflation figure for a similar 0.4pp increase. The national inflation rate is currently 0.2% - so 0.6%YoY national inflation in November looks likely. Food prices look to be playing a role here, as the ex-food Tokyo number is unchanged at 0.7%YoY. But food prices did not rise on the month, so we aren't pushing this angle too hard. Consume price hikes make the rest of the data impossible to pin down. I'll stick to the view that on an underlying basis, nothing is really going on.

India 3Q19 GDP

Prakash Sakpal is bucking the consensus for a weak 3QGDP figure out of India later tonight. He writes: "India's 3Q GDP data today comes as a test of the huge monetary and fiscal stimulus the economy has received this year. Even so, the high-frequency data show no signs of recovery in GDP growth, which is what underlies a solid consensus of a further slowdown to 4.5% in 3Q from a six-year low of 5% in the previous quarter. We are optimistic with a 5.3% forecast, which is consistent with the central bank's (RBI) forecast, on the grounds that some, if not all, of the stimulus, has trickled down, while year-on-year growth also gets a lift from the low base effect. Despite our "optimistic" growth view, we don't think the RBI will let its guard down just yet, which is even more unlikely in the event growth does tumble in line with consensus. We expect one more 25bp rate cut in December".

What's left?

The rest of the day contains Singapore money supply, Japanese housing starts, construction orders, and consumer confidence, Thailand trade figures, and Taiwan 3Q GDP. Probably none of it will be massively market-moving, but on a day when market liquidity may be a bit thin, there is always scope for some surprise.

Article | 28 November 2019

Asia week ahead: RBA to stay on hold, RBI to cut again

It's going to be a busy week in Asia dominated by the usual start-of-the-month economic releases as well as India and Australia's central bank meetings

Source: Shutterstock

➔ A mix bag of central bank policy

The Reserve Bank of Australia and the Reserve Bank of India meet next week. Australia's exceptionally [weak labour report](#) for October made a case for more RBA easing. Adding to the pressure was Governor Philip Lowe's reluctance for quantitative easing, expressed in his speech earlier this week, which now has markets pricing in more interest rate cuts. However, many (including us) are sceptical we will get a rate cut next week; the implied market probability of a 25 basis point rate cut next week is only 12%.

Supporting the stable RBA policy call would be the third-quarter GDP data showing firmer growth. But, the release comes a day after the central bank meeting, which doesn't make it a timely input for policymakers.

Staying ahead in the global easing cycle, India's central bank looks poised to cut rates again by 25 basis point next week given that growth continues to be on a steady downward path. Governor Shaktikanta Das is determined to ease for as long as it takes. However, aggressive policy stimulus on both monetary and fiscal sides has started stoking inflation, pushing it above the RBI's 4% comfort level in recent months, which means this could be the last cut of this easing cycle.

➔ And a data-packed calendar

Trade, purchasing manager index (PMI), and inflation figures dominate the data calendar.

Korea's trade data for November will serve as a guide to the rest of Asia's exports this month. Even if the uncertainty on the US-China trade front continues, exports have at least stopped getting worse, including electronics exports, the mainstay of some Asian countries. Albeit ongoing trade noise, we expect the Asian trade picture to be clearer, and better too going into 2020, at least from a statistical perspective as the base effects will normalise, if not fundamentally. The export order components of manufacturing PMIs will be an interesting watch from this perspective.

Inflation remains benign throughout the region (spare India, as mentioned earlier). Low inflation and continued weak growth outlook suggest central bank policy should remain accommodative at least through 2020, though the current easing cycle has almost drawn to a close.

Asia Economic Calendar

Country	Time	Data/event	ING	Survey	Prev.
Saturday 30 November
