ASEAN Morning Bytes

General market tone: Slight risk-on. Increasingly good news on the US-China trade negotiations sustains risk appetite even as economic data falters.

EM Space: Awaiting a possible US-China summit

- **General Asia:** Speculation that both the US and China are close to signing a deal will keep market players slightly upbeat with some reports indicating that a signing summit could take place as early as mid-March. Meanwhile, investors will also be looking to the slew of economic data reports, the ECB meeting and developments on Brexit for direction.
- **Malaysia:** January trade data is due. Despite outperformance in 2018, we don't think exports are immune to the accelerated weakness seen elsewhere in Asia. This is the last piece of economic data before the central bank (BNM) meeting tomorrow. BNM policy meetings have been boring lately but tomorrow's is likely to be less so in view of the negative inflation in January for the first time in nearly a decade. We believe deflation is transitory and policymakers see through the data and leave the policy on hold.
- **Indonesia:** Indonesia's inflation continued to decelerate, with February prices registering only a 2.57% increase from a year ago, the slowest pace of growth since November 2009. The reading was below median expectations for price gains and clings to the lower end of the 2.5-4.5% inflation target. The decelerating trend in inflation coupled with the recent strength of the Rupiah continues to add fire to the case for eventual policy easing from Bank Indonesia amid a possible pause in the Fed tightening.

What to look out for: US jobs data and China trade data

- Malaysia trade (4 March)
- South Korea GDP and inflation (5 March)
- Philippines inflation (5 March)
- China Caixin PMI composite (5 March)
- Australia RBA meeting (5 March)
- Malaysia BNM meeting (5 March)
- US ISM Manufacturing services (5 March)
- Australia GDP (6 March)
- Taiwan GIR (6 March)
- US ADP employment and trade (6 March)
- Fed Barkin speech (6 March)
- Australia retail sales and trade (7 March)
- Malaysia GIR (7 March)
- EZ GDP and ECB meeting (7 March)
- Fed Williams and Mester speech (7 March)
- Japan GDP (8 March)
- Taiwan trade and inflation (8 March)
- US NFP employment (8 March)
- China trade (8 March)

China: What to expect from the Two Sessions

China's biggest political meetings of the year, the so-called Two Sessions, kick off over the weekend, with the focus centred mainly on the government's work report, which will include GDP growth targets and the fiscal budget. Comments about the yuan's path could also provide insight into a possible future draft trade agreement

Source: Shutterstock

Work report to follow the Central Economic Work Conference

The Two Sessions, or back-to-back meetings of China's major political bodies, will take place on 3 March (Chinese People's Political Consultative Conference) and 5 March (National People's Congress).

It's a bit strange this year that official media has not put out a dedicated page for these meetings but we believe this could be because [the Central Economic Work Conference](#) has already drafted the direction of economic growth, fiscal stimulus and monetary easing for 2019.

Still, we're looking forward to reading the government work report on 5 March because it's expected to announce a set of economic targets for 2019.

What to expect in the government work report

1 GDP target

We expect that the GDP target will not be lower than 6%, to reinforce the Central Economic Work Conference's main priority of providing job stability.

It's possible that the work report will announce a target range for GDP growth, or just repeat last year's growth rate of around 6.5%. Our forecast for this year is 6.3%.

If the GDP target range were to be set between 6% and 6.5%, investors would almost certainly fixate on the lower end of the range at 6%, which could create hiccups in the market. But we expect this would be a temporary setback, as investors have been aware that growth could take a hit due to growing trade tensions and, in theory, should have been preparing for a lower target.

A more worrying sign would be if the government announced a future five-year average of around 6%. This could really create market concern of a deeper slowdown.

2 Fiscal budget

We expect the fiscal deficit will be 3.0% of GDP. But China's actual fiscal deficit is usually 0.5 percentage points higher than the planned deficit. We expect it will be even greater than that because this year is intended to support economic growth. We forecast the fiscal deficit at 4% of GDP.

We will be focusing on whether the government is prepared to invest in infrastructure to support the economy. From this, we will be able to gauge the severity of the headwind from the ongoing trade dispute.

Aside from infrastructure projects, the work report could also focus on tax cuts. We don't believe tax relief would be as effective at stimulating the economy during a downward cycle as infrastructure spending, but some changes in this area would be an important signal about how the government gauges the economic situation in 2019.

3 Monetary easing

Here, our focus will be the description of the yuan's path. Last year, the government committed to "keeping the yuan exchange rate stable at a reasonable equilibrium level". The US wants China to keep the yuan stable as part of any trade agreement, so the wording on this in the government's work report could form part of a final trade agreement.

We would not be surprised if the government drops its description of monetary policy as "prudent" so as to remain consistent with the recently-published monetary policy report. The emphasis will be to divert liquidity to small private firms, which suggests that the Targeted Medium Lending Facility could replace the Medium Lending Facility.

4 Economic reforms

We expect that economic reforms will focus more on improving public services such as providing affordable medicine to public hospitals, education and rural infrastructure to improve the quality of life.

Technology will also be in focus but we assume this will be a relatively low key item in the report to avoid attracting further negative comments from the rest of the world.

Our view is that reform efforts will no longer include deleveraging or cuts to overcapacity this year. Economic conditions don't allow for further deleveraging, which would put additional pressure on growth.

The main focus will be....

In sum, we believe that the work report will be in line with the government's existing policy direction. If there is any divergence from current policy, it will likely be to provide more support for the economy.

For us, the main focus will be on the wording of the yuan's trend, as this could affect how trade talks progress.

ING China economic forecast for 2019

China	2017	2018	2019F
Real GDP (% YoY)	6.9	6.6	6.3
CPI (% YoY)	1.6	2.2	2.5
PBOC 7D reverse repo rate (% <u>eop</u>)	2.50	2.55	2.55
10Y govt. bond yield (% <u>eop</u>)	3.90	3.30	3.10
CNY per USD (<u>eop</u>)	6.51	6.88	6.75
CNY per EUR (<u>eop</u>)	7.80	7.87	7.76
