## ✓ US: Re-opening rebound

The US focus will be on how high retail sales and industrial production bounce following the ending of lockdowns across many states. Given car sales numbers have rebounded strongly we expect robust retail sales, but significant pent-up demand means we see upside for spending more broadly especially given that the uprating of unemployment benefits has boosted incomes.

Factory re-starts should also mean robust manufacturing activity, but oil and gas extraction will be a drag on industrial production overall. However, social distancing, consumer caution and the fact employment remains nearly 20 million below the levels of February means gains after this initial re-opening surge will be more challenging to come by.

## ✓ Bank of England to expand QE amid slow recovery

The Bank of England expanded its quantitative easing programme back in March to give it room to expand its balance sheet by £200bn. Since then, the Bank has bought around £140bn worth of government bonds, and at the current rate of buying looks set to hit the limit over the next couple of months.

But with the economic recovery still in its very early stages, we'd expect policymakers to further increase the QE target next week. A couple of MPC members voted for a £100bn increase at the last meeting, but according to our Rates Strategy team, this kind of expansion may only just see policymakers through to the September meeting.

To avoid premature discussion about ending the policy or of tapering, we're inclined to say the Bank will go for something in the region of a £150bn increase next week.

## ✓ Brexit leaders set to inject talks with political lease of life

It's fair to say Brexit talks haven't really gone anywhere over the past few rounds. In theory that might change, with UK prime minister Boris Johnson and EU Commission President Von der Leyen set to hold talks. But while this might help revive hopes of a free-trade deal later this year – something that we still narrowly think is most likely – the reality is that the ball is firmly in the UK's court.

Britain faces a decision on whether to align with EU state aid rules if it wants tariff-free access. Still, for the economy, the main thing to remember that even with a deal, the UK is leaving the single market and customs union at the end of this year, and this is where the bulk of the costs and disruption are likely to come from.

## ✓ Eurozone: Recovery Fund discussions begin

Next week, all European eyes will be on the EU summit where the Recovery fund proposal by the European Commission will be discussed.

Positions have been taken with the countries usually critical of burden-sharing demanding a smaller size and not grants but loans to be distributed to the harder hit member states and sectors. We view the Commission proposal mainly as a starting point for the negotiations and think it is by no means a certainty that a deal will be struck this week.

It could well be summer – when Germany takes over the EU presidency – before a decision on a possible recovery fund is made.

## ✓ Norway: Rates at zero for longer

The Norges Bank meets on Thursday, having cut rates in May to zero percent. We don't expect any major changes this change, and Governor [Olsen has been clear](#) that there's little appetite for negative rates or quantitative easing, given neither are particularly viable options for the Norwegian economy. We expect rates to remain on hold for at least the remainder of 2020 and 2021. Sure, the situation for oil prices and NOK have somewhat improved, but it remains the case that the relatively low oil prices could have long-lasting effects on oil investment. Meanwhile in comparison to its Swedish neighbours, a stricter lockdown policy will have created a serious dent in second quarter GDP.

## Asia week ahead: Central banks up for more rate cuts

Three Asian central banks will decide policies next week - Japan, Taiwan, and Indonesia. Two are expected to cut policy rates further and one will stay on...

Source: Shutterstock

# 4.25%

Bank Indonesia policy rate

After 25bp cut next week

## Central bank policy

Central banks in Japan, Taiwan, and Indonesia hold their monetary policy meetings.

Having pledged an unlimited purchase of government bonds since March, yields close to zero, and the main policy rate negative, Japan's central bank monetary easing has run out of steam. Nobody expects them to do anything next week. Yet, keeping with his usual dovish rhetoric, Governor Haruhiko Kuroda today committed all necessary steps to support cash-strapped business and protect jobs. But, he also regarded easing so far as “sufficient and appropriate”. Does this still leave any interest in the BoJ meeting?

---

*The most important thing now is to provide necessary financing to firms through the banking system, and to make financial markets stable.- BoJ Governor Kuroda*

---

The Central Bank of China, Taiwan's central bank, is expected to continue with its piecemeal policy easing and cut the interest rates by another 12.5 basis points to 1.0%, an all-time low. This is just a second rate cut in this easing cycle as the economy is almost unscathed by the Covid-19 pandemic and we see this as the end of the easing cycle.

And one of Asia's aggressive easer since mid-2019, Bank Indonesia, will be back in action next week, delivering another 25bp policy rate cut to 4.25%. Indonesia's GDP growth has slowed sharply and inflation has been subdued, warranting more policy accommodation. Moreover, the usual headwind for BI easing, the weak currency, has been absent; the Indonesian rupiah has been an emerging market outperformer since April. If continued, these trends will open doors for more BI rate cuts ahead.

## Busy data calendar

The next batch of China's activity data for May arrives next week. This includes key indicators such as industrial production, retail sales, and fixed-asset investment. The consensus estimates point to an improvement in these indicators, albeit smaller declines in retail sales and investment.

---

*The key question of the week is whether Singapore's non-oil domestic exports continue to buck the weak exports trend.*

---

The calendar is also heavy on the external trade figures for May coming from India, Indonesia, Japan and Singapore. The export weakness is seen accelerating in most Asian economies. But, Singapore's non-oil domestic exports (NODX) have been in the limelight recently for bucking the weak trend on the back of surging pharmaceutical demand in this global pandemic. Whether that continued in May needs to be seen. The consensus suggests another month of positive NODX growth. But we are sceptical and look for a 6% YoY fall.

And the May jobs report in Australia and New Zealand's first-quarter GDP report will make into the headlines.

## Asia Economic Calendar

## Key events in EMEA and Latam this week

An exciting week ahead in EMEA and Latam with central bank meetings in Poland, Brazil and Russia. Expect a rate cut from Russia on the back of subdued...

Source: Shutterstock

### ✓ A rate cut from the Bank of Russia

The Bank of Russia is expected to cut the key rate (currently at 5.50%) on 19 June, and we are on the conservative side of the 50-100bp consensus range.

Acknowledging the below-expected CPI growth of [3.0-3.1% YoY](#) and weakness in local demand, the central bank is still quite wary of risks to the Russian capital account. In fact, most central bank decisions in the last 7-8 years could be easily interpreted through the prism of strengthening the capital account.

In practical terms, with net private capital outflows [accelerating](#) from a monthly US\$4-7bn in the first four months of the year to US\$10bn in May, and foreign portfolio inflows to the local public debt stagnating at +US\$0.7bn per month in April-May, the central bank may opt to keep the road to the rate floor, which we see at 4.0% in 2021, more gradual.

Additional arguments against a large-scale cut (even though the CBR mentioned the 100bp cut as one of the options on the table) include the activity data for May, the second and final month of the nationwide Covid-19 lockdown, also to be released next week.

- First, the drop in industrial production is likely to deepen from -6.6% YoY in April to -7-8% YoY in May, however, this deterioration will be driven by Russia's 96-99% compliance with OPEC++ oil production cuts.
- Second, based on high-frequency data, retail trade should somewhat recover from the -23.4% YoY drop in April to -16-17% in May.

In any case, as the central bank's representatives have indicated that in Russia monetary easing would be more efficient when secondary effects kick in, rather than during or immediately after the lockdown. We believe that regardless of the scope of 19 June rate cut, the CBR is likely to maintain a generally dovish tone.
