US: Fed's meeting minutes to shed light on further trimming of asset purchases

The Thanksgiving holiday in the US means a short week with the data flow concentrated on Wednesday. The highlight may well be the minutes to the November 3rd FOMC meeting when the Federal Reserve announced the start of QE tapering. Monthly asset purchases have been trimmed \$15bn from \$120 bn, but the accompanying statement suggested that they would be “prepared to adjust the pace of purchases if warranted by changes in the economic outlook”. St Louis Fed President James Bullard has proffered support for tapering by \$30bn per month and we will be looking to see if the minutes shed light on what the criteria might be to justify such action. With the economy likely to grow in excess of 6% annualized in the current quarter and inflation to average around 6.5%, the case for a swifter path to policy “normalisation” is strong.

In terms of the data, we expect a modest upward revision to 3Q GDP growth, but the October personal spending will be more significant as it tells us how the fourth quarter started. Based on retail sales it should be good while the Fed's favoured measure of inflation, the core PCE deflator, will continue pushing higher and on an annual basis come in double the 2% target. Home sales numbers are not expected to move much on the month, but the increase in homebuilder

sentiment suggests buyer traffic is on the rise and this should lift housing activity in the new year.

Asia week ahead: PMIs, central bank decisions and Singapore inflation

The coming week features several PMI manufacturing reports and a couple of central bank decisions.

PMI could shape sentiment

The week ahead offers little in terms of hard data, but there are a number of purchasing manager indices (PMI) and business surveys which will help to shape sentiment on the pace of economic activity. Our Regional Head of Research, Rob Carnell, thinks that “Australia’s PMI indices should show a decent jump as lockdowns come to an end and the service sector, in particular, should rebound strongly. Japan’s PMI indices will likely remain at the lower end of results indicating modest growth and probably little change from last month. In South Korea, business surveys have shown a deteriorating trend in manufacturing – supply constraints and rising import prices taking their toll, whilst the service sector has made steady gains. That trend seems likely to be repeated this month.”

BoK and PBoC decisions

At the last meeting, Bank of Korea (BoK) Governor, Lee, noted that the BoK would probably hike at the November meeting, all things being equal. With Korean inflation currently 3.2%, and a further

rise likely from the November data, coupled with a reasonable ongoing economic recovery, this looks as clear a case for a rate hike this month as we are ever likely to get. We anticipate a further 50bp of tightening in 2022. Though with household debt substantial, it probably won't take too much tightening to slow the economy and bring the housing market back under control.

Meanwhile, the Peoples' Bank of China (PBoC) meets on Monday to set monetary policy and we expect the loan rate to remain unchanged. However, PBoC may continue to control daily market liquidity to help stabilize short term interest rates.

The rest of the field

The coming week also features Taiwan industrial production and our greater China Economist, Iris Pang will be looking out for hints on the status of world computer chip supply. She expects month-on-month growth in production of integrated circuits as the production capacity should have hit its limit, though YoY growth should still be strong. Meanwhile, Singapore will be reporting October CPI inflation also next week with monetary authorities monitoring the pickup in price pressures. Core inflation will likely accelerate to 1.3% as supply-side bottlenecks keep price pressures elevated.

✓ Poland: Solid labour market and GDP structure highlight strong economy

October macro data should underline the strong performance of the Polish economy. With a far lower share of carmakers in industry, Poland is less affected by supply chain disruptions. The decline in the unemployment rate should show strong labour market performance, hinting at high wage growth ahead. The overall GDP structure, largely hinging on consumption and in turn prolonged inflation.
