# Key events in developed markets next week

Industry, confidence, labour market and retail sales data in developed markets next week suggest a slow recovery ahead for both the US and the Eurozone

Source: Shutterstock

## ✓ US: Growing impatient

This coming week's data is for July and the story should remain fairly positive with industrial production and retail sales continuing to recover from the lockdown measures.

The ISM survey posted decent gains while strong auto sales and higher gasoline prices are providing solid bedrock for the retail sales number. Inflation should also pick-up a little further given rising gasoline and food prices in particular. However, high-frequency data suggests that the US recovery story is showing signs of stalling as a rising number of Covid-19 led to reintroduced containment measures.

Confidence has taken a massive hit while the employment situation is looking more challenging as many businesses that had re-opened are forced to close due to restrictions. This is leading to job losses in many areas while the deadlock in Washington over another fiscal support package means that 30 million-plus people that had been receiving the \$600 per week additional Federal unemployment benefit will no longer do so.

The combination of weaker confidence, a tougher jobs market and a squeeze on household income means that the outlook for August and September activity data isn't great.

## ✓ Eurozone: Industry slow to recover

After this week's encouraging retail sales figures, the Eurozone focus will be on how industrial production and exports recovery is shaping up. Hopes for a 'V' outside retail are smaller, so expect a slower recovery in production and exports.

# Asia week ahead: Lots of Chinese and Indian data

Data out from China next week should show the third-quarter is off on a firmer start, but unlike China, the economic slump in India seems to be far from...

Source: Shutterstock

## ➔ China: More momentum

China's July data pipeline started this week and will continue throughout next week with figures on industrial production, fixed investment, retail sales, consumer and home price inflation, and monetary and lending indicators.

We think most indicators will post better readings than they did in June, suggesting that the third quarter is off on a firmer start.

## ➔ India: Not looking any better

Unlike China, the economic slump in India seems to be far from over, while resurgent inflation has closed the door on central bank monetary easing this week. We don't think forthcoming data will alter this either.

We see July CPI inflation to be steady above the Reserve Bank of India's 6% policy limit. Food remained a dominant inflation driver but high utility and transport costs also contributed. Real economic activity may have seen some pick up in recent months following the relaxation of the Covid-19 lockdowns, though it still remains way below the level that was seen just a year ago, as will be reflected by persistently big declines in exports and manufacturing.

## ➔ Malaysia: The worst may be over

Malaysia's 2Q20 GDP is out next week too. We forecast an 8.3% year-on-year contraction - the steepest since the 1998 Asian crisis. We think markets have almost become indifferent to downside GDP growth surprises from around the region and they are unlikely to be perturbed if Malaysia's growth numbers follow a similar path.

With key drivers of exports and tourism missing, the negative GDP trend will remain over the second half of the year. And, with inflation continuing to be negative, the doors remain open for some more monetary easing from the central bank.

## ➔ Rest of Asia: Looks pretty slow

Other things on the calendar include July labour report in Australia, a central bank meeting in New Zealand, a couple of activity releases in Japan, and revised 2Q GDP in Singapore.

We share the consensus view of a sharp slowdown in Australia's jobs growth (ING forecast 62.5k vs. 210.8k in June). There is unlikely to be much happening at New Zealand's central bank meeting with rates remaining on hold.

Singapore's 2Q GDP might as well go unnoticed despite a likely downward revision from the -12.6% YoY first print on the back of weak June manufacturing.

# Key events in EMEA and Latam next week

The moment of truth arrives next week as 2Q GDP data across EMEA is released next week. We are bound to see some historic drops, but the real question is...

Source: Shutterstock

## ✓ Hungary: Expect a large drop in 2Q GDP

Like others in Europe, Hungary won't have much to cheer about next week as second-quarter GDP numbers are released

We expect a 10.5% year-on-year drop in GDP, posting a new record after the collapse in mid-2009. Unfortunately, the preliminary data release won't include details about the structure of the collapse. To see this we must wait another two weeks.

Our best guess is that only government spending might contribute positively to the economic activity while other areas on the final use side (mainly consumption and investments) will provide a huge drag on growth.

Before GDP data, July inflation numbers will be released. Excise duty increased on tobacco, end of free public parking, fuel prices increased, draught and a weaker HUF. These are the factors which we see contributing in accelerating headline and core inflation figures.

## Poland: Optimism from CA data may be weakened by negative GDP reading

This week we expect another stellar current account reading, for June. Polish exporters were relatively resilient to the pandemic, partially down to their lower share of automobiles in the industry compared to CEE counterparts. Also, investment activity is most likely weak, keeping imports subdued. A lasting improvement in trade balance is one of the key reasons behind the zloty remaining stable despite a very dovish central bank.

Next week, we're also expecting a terrible (but close to the local consensus) flash GDP reading for 2Q20: -9% YoY. This largely reflects the lockdown in Poland, affecting consumption and investment.

The ongoing recovery is likely to prove slow due to worsening labour conditions.

## Czech Republic: Inflation to slow down

July CPI is likely to slow down close to 3%, but uncertainty remains elevated. Not only due to food prices, that have developed recently against a typical seasonal path, but also due to many other prices that might have been impacted by the Covid-crisis.

Prices of holiday packages have been increasing substantially during July, and this year might be less pronounced, at least for some types of holidays.

As such, we expect slightly weaker than usual MoM increase this July, leading to some slow-down in YoY CPI, despite the fact that inflation has been surprising on the upside in recent months.
