Key events in developed markets next week

US housing data will be the focus next week, as it continues to be a key growth driver. Across the Atlantic, all eyes will be on what emerges from the Brexit talks

Source: Shutterstock

✓ US: Housing market continues to drive growth

The data focus next week will be US housing numbers which will continue to show this sector as a key growth driver. Record low mortgage rates are driving the recovery while the prospect of a structural shift towards more homeworking is also helping to fuel buyer interest, particularly for second homes or vacation homes. After all, the average age of a US homebuyer is late 40s so they have good employment records and decent credit history. This is positive for other sectors in that it typically correlates with stronger spending on home furnishings and furniture/garden equipment and building supplies as buyers look to kit out their new property.

Other than that we will be looking at the number of Covid cases given rising anxiety at what is happening in Europe – more hospitalisations forcing the reintroduction of Covid containment measures – could happen on this side of the Atlantic too. We will also be listening for positive news on another fiscal stimulus, but given the proximity to the elections that isn't looking probable right now.

Initial claims numbers will also be a focus given the surprise rise last week, which underlines concerns about ongoing strains in the jobs market.

UK: Brexit and inflation back in focus

The European Council, as well as the UK's mid-October deal deadline, have now both been and gone.

But despite plenty of noise emerging (expect more next week...) from negotiations, the general feeling is that a deal is still more likely than not, albeit perhaps we might not see it until early-mid November. None of the core issues look totally insurmountable, but as ever it comes back to the politics, and in particular whether prime minister Boris Johnson can gain approval within his party for a compromise. The answer is most likely 'yes', although, despite the government's strong majority in the House of Commons, there have been increasing signs of dissent among Conservative MPs.

Separately, next week we'll get the latest inflation numbers which should bounce-back after the figures were distorted by the 'Eat Out to Help Out' discount scheme in August. Volatility aside, inflationary pressures are unlikely to grow over coming months given the deteriorating jobs market backdrop.

Key events in EMEA and Latam next week

Central bank meetings take place in Hungary, Russia, Ukraine and Turkey next week but most are expected to stay on hold

Source: Shutterstock

✓ Poland: W-shaped growth?

A lacklustre PMI reading suggests downward risk to our forecasts, suggesting the economy is no longer tracking the V-shaped recovery path. However, September figures should have limited market significance. The central bank has convinced investors that current figures will not impact its monetary policy.

The fourth quarter will be the real test for the economy. The mounting number of Covid-19 cases suggests more of a W-shaped growth path.

✓ Hungary: HUF underperformance could lead to a rate hike

The highlight in Hungary next week will be the October rate-setting meeting by the central bank, although we see this as a non-event for markets, with no change in rates and no change in tone. The latest downside surprise in inflation gives the National Bank of Hungary some comfort, but the recent underperformance in the forint increases the chances of another hike in the 1-week deposit rate.

✓ Russia: Rates should remain unchanged

The Bank of Russia is likely to keep the 4.25% key rate unchanged given the recent pick up in

inflationary pressures amid weakness in the rouble, but the medium-term signal should remain dovish.

The softening in demand, which is likely to be confirmed by next week's activity data, signals below-target CPI in 2021 and leaves room for a key rate cut to 3.5-4.0% in 2021 provided market conditions allow.

✓ Turkey: Rate hike expected as tightening continues

Following a surprise policy rate hike last month, the central bank has further raised its effective cost of funding rate to above 12%, continuing previous tightening measures to control inflation and support the currency.

In October, the Bank is likely to continue tightening by pulling the policy rate to 11.75%, translating into a 150 basis point hike. Such a move would also provide additional flexibility to further tighten liquidity and to raise the effective funding rate if required.

Asia week ahead: 3Q GDP season kicks off

China GDP numbers will be the highlight next week but we'll also be keeping an eye out for trade numbers from Japan and Thailand to see if they confirm the export-led recovery story

Source: Shutterstock

➔ China 3Q report card

China's 3Q20 GDP report will be the highlight of next week. GDP will be out on Monday alongside September activity data on industrial production, retail sales, fixed-asset investment. The Peoples Bank of China also reviews its one- and five-year loan prime rates next week.

Higher manufacturing PMI in September heralded firmer industrial production, while strong industrial profits growth in recent months likely pulled fixed-asset investment growth back into positive territory in September. A surge in spending ahead of the long National Day holiday and the government's drive to promote cross-provincial tourism should support retail sales too. While

there was ample banking sector liquidity supporting the domestic economic activity, external demand also continued to improve, as data earlier this week showed.

All this suggests that the third-quarter GDP performance should be better than that of the second quarter, imparting upside risk to our house forecast of 2.5% YoY GDP growth in the last quarter (3.2% in 2Q). We don't see any reason why the PBOC should alter the current monetary policy setting.

➔ Export-led recovery

September CPI inflation and external trade figures crowd the calendar for the rest of the region. We don't think anybody cares about inflation, which has been negative or close to zero in much of the region, especially in the reporting countries next week -- Japan, Hong Kong, Malaysia and Singapore.

Japan and Thailand will release trade figures for September. We take a cue from firmer exports elsewhere in the region and look for the same in these two countries, though their export growths are yet to turn the corner into positive territory.

Taiwan's export orders will be a key indicator of electronics-led recovery coming into the final quarter of the year.
