✓ US: Consumer and manufacturing sectors to stall after the reopening rebound

After the initial bounce in activity in the wake of the reopening of the economy, we are now in the second phase of the recovery where underlying economic fundamentals matter much more. In the case of the US, the second spike in Covid-19 cases led to many states scaling back their reopening strategies and the combination of renewed health and economic concerns pushed confidence lower in July. We expect it to stay subdued in August, especially with employment growth showing signs of stalling and incomes being squeezed for millions of people due to the \$600/week Federal unemployment benefit boost having ended. It is being replaced by a new \$400 payment, but even so the combination of weaker confidence, employment and incomes means that the consumer sector is going to struggle to maintain its recent run of strong performance.

Meanwhile, durable goods orders should continue to post a solid growth rate on the reopening story. Like the consumer sector, gains after the July report will be tougher to come by with leading surveys for August already indicating a slowing in the pace of manufacturing activity.

Canada: Slow recovery expected

Canada will likely post a record plunge in GDP of around 40% annualised for 2Q. Following the already announced 1Q contraction this would bring the peak-to-trough fall in Canadian GDP in the first half of 2020 to 13.8% - more than the US's 10.6% decline, but nowhere near as bad as the 20%+ falls experienced by the UK and Spain. Monthly data is now pointing to growth, but with Canada dependent much more on commodities and trade than the US it is likely to experience a slower rebound versus its economically larger neighbour.

Bank of England speakers in focus as negative rates debate rages on

With unemployment set to rise over the remainder of the year, there's going to be growing pressure on policymakers in the UK to increase support. How the Chancellor responds as the Job Retention scheme (furlough) is unwound will be particularly key. But the Bank of England is also increasingly likely to add stimulus - and the bigger question is whether a new package of support will include negative rates.

We think it's fair to say the Bank is still on the fence on this one. There was a detailed box in the latest Monetary Policy Report that went into some of the evidence on how negative rates affect bank lending - but policymakers were careful not to formally lean in one direction or another. The policy remains 'in the toolbox' according to Governor Andrew Bailey, and we'll be listening out for any further hints when he and Chief Economist Andy Haldane speak next week.

At the moment, we think QE will remain the preferred avenue of stimulus with a further expansion likely in November. Policymakers might also opt to initially move to a negative rate on the bank's targeted lending schemes, while keeping Bank rate at or above zero.

Asia week ahead: Bank of Korea in the spotlight

Data may show that confidence is weakening in South Korea but the central bank will likely do nothing about it. Industrial production and trade releases dominate the calendar for the rest of Asia

Source: Shutterstock

➔ Korea: Central bank stays on hold

The Bank of Korea meets on Thursday, 27 August. After cutting interest rates by a total of 125 basis points, to 0.50%, in the year through May, the BoK paused at the last meeting held in July. We don't think they will move next week either, which is also the broad consensus.

Just days ahead of this decision are the central bank's monthly confidence indicators. Both consumer and business confidence indices may exhibit some weakness amid resurgent Covid-19 cases since the previous week. A possible second wave outbreak may tip the balance towards

easier macro policy, though our house view remains that the BoK easing cycle has run its course.

➔ Rest of Asia: Manufacturing data dominates

Industrial production and trade releases dominate the calendar for the rest of Asia.

China's industrial profits growth might have softened a bit in July, though the markets should take some comfort from the fact that it remained positive for a third straight month, signalling firming activity and the improved prospect of investment spending. In Hong Kong, trade figures should reveal the pinch from the escalation of US-China tensions over the territory's autonomy.

Taiwan's industrial production should have benefited from firmer exports in July, though that might not be the case in other countries reporting their IP data next week. We see continued negative year-on-year IP growth in Singapore and Thailand, though some of this is also due to the base effect.

Malaysia and Thailand report trade figures for July. We believe a surprising bounce in Malaysia's exports in June was reversed in July, though, as elsewhere, some of this is the base effect noise. In Thailand, we see nothing in the trade data to ease the authorities' discomfort about the strong currency potentially threatening the recovery in exports and tourism. July was another month with a big trade surplus, as import weakness outweighed export weakness.
