Key events in developed markets next week

The Bank of Canada will announce its latest monetary policy decision on Wednesday. We favour a hawkish hold as GDP and consumer price inflation have been stronger than expected, and the labour market remains robust. The US data flow in the coming week is unlikely to move markets much given the CPI release in the following week

🕑 US: All eyes on May core inflation

Market expectations for whether the Federal Reserve will hike interest rates again have swung wildly over recent weeks. Currently, the favoured narrative is that the Fed has raised interest rates significantly and tighter lending conditions will act as a brake so it may be best to hold rates unchanged at the June FOMC and re-evaluate the situation in July. If the jobs market is still hot and inflation continues to track well above target, they can then hike again. Nonetheless, there are hawks on the FOMC and if May core inflation, released 13 June, comes in at 0.4% or higher, the decision could become a very close call. With the Fed entering its quiet period ahead of the decision, there will be no officials discussing the outlook for monetary policy over the coming week. The data flow includes the ISM services index, inventory numbers, the trade balance and consumer credit together with an update on the state of household and corporate balance sheets in 1Q, published by the Federal Reserve. While interesting, they are not going to move markets much given the importance of CPI the following week.

🗹 Canada: A hawkish hold

The Bank of Canada is set to announce its latest monetary policy decision. The consensus is for no change, but after stronger than expected consumer price inflation and GDP and with the labour data remaining robust the market is pricing a 25% chance of a hike on 7 June with a 25bp hike fully discounted by the 6 September policy meeting. The BoC last raised rates on 25 January and has held them at 4.5% since then. The last statement warned that they were prepared to raise the policy rate further to ensure inflation returns to 2% and Governor Tiff Macklem stated that the bank remains concerned about upside inflation risks. Nonetheless, they also accept that monetary policy operates with long and varied lags. Consequently, we favour a hawkish hold, signalling that unless there is evidence of softening in price pressures very soon, they could raise rates again in July.

Asia week ahead: Reserve Bank of Australia to decide on policy rate

Next week's data calendar features a key policy decision from Australia, inflation numbers from Indonesia and the Philippines, plus retail sales from Singapore

Persistent inflation could prompt RBA to hike again

The June Reserve Bank of Australia (RBA) meeting is a tough one to call. The RBA recently confused markets with its reversion to a more hawkish stance, even as inflation was weakening, and now the fall in inflation has reversed, there is a reasonable argument for it to hike again this month. However, the quarterly CPI data still seem to carry more weight than the monthly series at the moment, so some forecasters expect the RBA to wait until the August meeting when it will be able to respond to second-quarter CPI inflation.

Our forecasts are for inflation in July to have fallen to 5.2% year-on-year, but the second-quarter rate will still probably be in excess of 6%, so the RBA could well argue a further hike was needed then to ensure that inflation was falling fast enough. But with inflation rising again in April, it is going to be very hard for the RBA to sit on the sidelines in June, so a low conviction 25bp hike is our call this month, but we wouldn't be shocked if the central bank decides to pause.

Philippine trade balance to stay in deficit on soft electronics exports

April export data is set for release next week and we could see both imports and exports remain in negative territory. Imports are expected to drop on a year-on-year basis on shrinking energy imports, while exports could face another month of contraction due to soft demand for electronics. The Philippine export sector is dominated largely by electronics, and weak global demand for smartphones and gadgets will likely impact the overall Philippine export sector. The trade gap is forecast to remain in deep shortfall (\$5.1bn) which points to pressure on the Philippine peso in the near term.

Inflation readings from Indonesia and the Philippines

Headline inflation numbers for both Indonesia and the Philippines will be reported next week. We believe headline inflation will continue to cool on a year-on-year basis as favourable base effects help push the headline number back toward target. Core inflation, on the other hand, could prove to be tricky as domestic demand for both countries remains robust. Core inflation in the Philippines may inch lower to 7.5%YoY (down from 7.9%) while Indonesia may even see core inflation inch up to 2.9% from 2.8% previously. Moderating headline inflation gives both Bank Indonesia and the Bangko Sentral ng Pilipinas space to maintain policy settings, however, we don't expect central banks to consider cutting rates just yet given the pressure on their respective currencies.

Singapore retail sales could manage to post growth

Singapore retail sales are expected to remain in expansion, although slowing from the pace reported in March. Elevated inflation is likely sapping some consumption momentum. The sustained increase in visitor arrivals however may be helping to provide retail sales a decent lift, especially for department store sales and services related to recreation. We expect retail sales to be subdued in the near term with a potential rebound should inflation decelerate towards year-end.

Key events in EMEA next week

Annual inflation in Turkey will likely decline further in May due to the policy promised by Tayyip Erdogan of making gas free for Turkish households in May. For Hungary's May inflation print, we expect core inflation to remain strong, coming in at around 0.8% on a monthly basis, while headline inflation is around 0.1%

Source: Shutterstock

🕑 Turkey: Inflation trending downwards due to election policy

Annual inflation, which maintained its downtrend to 43.7% in April with large base effects, is likely to decline further in May to 39.3% (-0.1% on a monthly basis). This is because the Turkish Statistical Institute (TurkStat) said it would reflect the impact of the government's decision to provide natural gas free of charge to households in May in its inflation calculations. TurkStat's practice is in line with Eurostat guidelines, according to its statement.

However, the outlook is quite uncertain for the rest of 2023, as a lira adjustment post-election and potential adjustments in wages and administered prices are likely to weigh on the inflation momentum.

Hungary: Annual headline and core readings flirting with 22% and 23% levels

Next week is set to be a busy one in Hungary. We are going to see the first set of hard data regarding second-quarter economic activity. We expect both retail sales and industrial production to contract on a yearly basis as high inflation and high interest rates are suffocating domestic demand. The only silver lining in industry is the export-oriented sectors like car and battery manufacturing.

We see some better budgetary figures in May as the heating season has ended and this might reduce the expenditure side pressure arising from energy bills. The relatively small monthly deficit would mean that this year's budget moves roughly in parallel with last year's deficit accumulation. The even better news could be if the trade balance posts yet another monthly surplus in April, as we expect.

The highlight of the busy week will be the May inflation print. Seeing the downside surprises across Europe, we wouldn't be shocked to see something similar in Hungary. We expect the month-onmonth headline inflation to come in at around 0.1% mainly on easing price pressures in food, fuel and durables. Services inflation, however, will remain strong, thus core inflation on a monthly basis will stay high around 0.8%. But thanks to base effects, the headline and core readings will flirt with 22% and 23% levels, respectively, a significant detachment from the peak reached in the first quarter.
