Key events in developed markets next week

The New Year should bring slower momentum for developed markets. We'll see what Fed officials have to say about scaling back rate hikes while hard data from the eurozone should provide insight into growth. Meanwhile, the Brexit battle is set to recommence on Wednesday

Source: Shutterstock

✓ US: A calming voice from the Fed?

Financial markets had a tumultuous end to 2018 as worries about trade wars and weaker global demand led to sharp markdowns in equity prices and Treasury yields. The government shutdown is adding to a sense of unease, and barring any sudden breakthrough on Capitol Hill; this will result in a delay to the release of trade and durable goods orders numbers scheduled for next week.

However, the key events next week will be comments from Federal Reserve officials. At the December FOMC meeting, they scaled back their expectations for monetary policy, suggesting two 25 basis point moves was the most likely scenario for 2019, down from the three hikes they had pencilled in back in September. Amidst all the current doom and gloom, financial markets are not even fully pricing in one move this year.

While there certainly are more headwinds for the US – lagged effects of higher borrowing costs, a strong dollar, fading fiscal stimulus and weaker external demand at a time of rising trade protectionism – there are also positives, with the strong jobs market delivering higher pay and the recent plunge in gasoline prices boosting household cashflows.

As such, we expect the bulk of Fed speakers to remain cautiously optimistic while soothing the concerns about an overly aggressive response from the central bank to any perceived inflation threat. In this regard, we expect December headline inflation to be pulled lower by energy price moves while core inflation remains at 2.2%.

Eurozone: Hard data, will it tell the tale of slow growth?

The eurozone starts the year with some quite relevant data releases. With some pitch black surveys about the eurozone economy throughout the fourth quarter, the question is whether hard data confirms the slow growth environment.

Retail sales data for November will be an important gauge of consumer spending, and unemployment will shed light on whether the labour market continues to improve. Also look out for December's Economic Sentiment Indicator, which will probably be impacted by the Yellow Vest protest movement in France.

May's Brexit battle recommences as lawmakers resume deal debate

Having been dramatically postponed in December, the Parliamentary debate on the Brexit deal resumes next Wednesday ahead of the critical vote on 14 January. When that happens, it still looks likely that Theresa May's deal will be rejected, potentially by a heavy margin.

If so, we're likely to hear renewed talk about a possible no-confidence vote in the government, although so far the opposition Labour Party has appeared reluctant to go down this route. That option aside, it's likely that MPs will get a say on what Brexit route to pursue next, and the possibilities that seem most likely to garner majority support are either a second referendum or a push for a Norway-style deal. In either case, the chances a Brexit delay in one form or another would increase, given time is short.

Bank of Canada to hold, for now

The recent oil price slump, weaker-than-expected business investment in 3Q18, a stabilising housing market and US-China trade tensions all mount to pushing the central bank of Canada to become more cautionary.

We still see a hike in the first quarter of 2019, but don't expect this to arrive next Wednesday. Instead, it's more likely to come when the central bank next meets in March when policymakers have had the chance to let the risk environment develop and assess the impact on economic capacity. Governor Stephen Poloz recently said this was a significant factor in determining the appropriate pace of rate hikes.

Asia week ahead: Redefining US-China trade relations

A positive turn in the US-China trade dispute following a phone call between Presidents Trump and Xi last weekend will get a reality check at the trade talks on 7 January

Source: Shutterstock

➔ Another round of US-China trade talks

After the dismal manufacturing numbers from China and Apple's downgrade of their earnings forecasts, the forthcoming US-China trade talks on 7th January offer some hope for the two sides to come to terms with the adverse consequences of their ongoing trade dispute.

President Trump hailed the 'positive progress' on trade after his latest phone call with President Xi. Having suffered heavily from intensified uncertainty since the Trump-Xi and G-20 summit, markets will cheer if there is a further push towards a trade deal by the end of March. However, any

backtracking on the imposed tariffs isn't really something one can hope for, which means the negative medium-term impact on both economies and thereby on the rest of the world will be inevitable.

China's economic data will continue to be gleaned for the trade war impact. We think the monetary data (aggregate financing and new bank lending) will be closely watched for evidence of stimulus. Meanwhile, the yuan's 1.2% appreciation in December, the most in the last twelve months, augurs well for sustained improvement in China's foreign exchange reserves after the decline in reserves in November.

China's FX reserves and USD/CNY exchange rate changes

➔ Otherwise, a light economic calendar

Aside from Taiwan's December trade figures, there isn't a whole lot to be excited about in Asia. Like Korea, Taiwan's exports are the front-line victims of the potential slump in global demand and the slowdown is already underway in the heavy-weight electronics segment. Judging from Korean exports in December, we believe the annual contraction in Taiwan's exports deepened in December (ING forecast -12.0% YoY vs -3.4% in November).

Finally, Malaysia's trade and industrial production data will be key for the central bank meeting later this month (24th January) as these indicators will tell us about GDP growth in the last quarter of 2018. An all-time low manufacturing PMI in December wasn't really great news here, and this tips the balance of risks for the central bank policy towards easing - though we don't think the central bank will rush in that direction just yet.

Korea and Taiwan export growth

Key events in EMEA and Latam next week

Central banks in Romania and Serbia are likely to leave policy rates unchanged next week

Source: Shutterstock

✓ National Bank of Romania front-run by the government

The National Bank of Romania (NBR) has been at odds with the government over its fiscal policy and its plan to tax bank assets. Recent moves by the ruling Social Democrats have complicated efforts to manage monetary policy and to some extent, have thrown into question the central bank's independence. A ROBOR-linked bank tax, announced last month, will tighten credit conditions, which means further NBR hikes could have an amplified impact. This opens the way for the NBR to cut the reserve requirement ratio (RRR) to ease its stance, leaving the vulnerable Romanian leu at the mercy of global sentiment. Needless to say, we see no change 8 January.

✓ National Bank of Serbia on hold due to external uncertainties

CPI inflation well within the target band, contained inflation expectations and recent currency appreciation could build the case for the National Bank of Serbia (NBS) to restart its rate cutting cycle. While there are some inflationary risks on the horizon from strong domestic growth momentum, a volatile external environment is the main reason for the NBS to stay on hold, in our view.
