##### Asia week ahead: Inflation readings across the region

Inflation figures for China, Australia and India will take centre stage over the coming week in Asia

#### Czech Republic | Poland

##### Key events in EMEA next week

Rates are set to remain unchanged in Poland's first MPC meeting of the year, while inflation figures come into focus in the Czech Republic

By Adam Antoniuk and Frantisek Taborsky

# Key events in developed markets next week

In the US, the main data highlight next week will be the release of the CPI report, which should show a soft print for this month given falling gasoline prices and more benign housing rent data. Over in the UK, all eyes will be on the November GDP figures, where we're forecasting a modest rebound following the weakness seen in October

Source: Shutterstock

## ✓ US: CPI report expected to show a soft print this month

The data highlight in the US will be consumer price inflation. The Federal Reserve certainly appears to be more relaxed about the inflation backdrop, with the minutes of the December FOMC meeting acknowledging that upside risks had “diminished” and this improved situation being cited as the main factor behind officials predicting a lower path for the Fed funds rate in 2024 than previously thought. The core PCE deflator has been showing more benign month-on-month readings than CPI over the past six months, but we think the CPI report will also show a soft print this month, given falling gasoline prices and more benign housing rent data. Core CPI is set to break below 4% year-on-year for the first time since May 2021, and this will give the Federal Reserve added confidence that inflation is on the path to sustainability reaching the 2% target by mid-2024.

## UK: Monthly GDP set for modest rebound after October's weakness

The level of UK activity contracted in October, according to the most recent monthly GDP figures, and a large part of that was down to an unusually large dip in manufacturing activity. The truth is that these figures are becoming increasingly unhelpful for judging the state of the UK economy, and assuming most of the factors behind October's dip were temporary, we'd expect a bit of a bounce back in the November figures due next week. Whether or not that happens will largely dictate whether the UK economy enters a "technical" recession, following a very slight fall in overall third-quarter GDP following recent revisions to the data. The reality is that a couple of quarters of -0.1% growth, if it happens, is not much to write home about.

While the jobs market is cooling, so far there aren't the widespread signs of job losses that are more typically associated with recessionary periods. For now, we think the UK economy will flatline through the first half of this year as positive real wage growth is offset by the ongoing passthrough of higher interest rates. The Bank of England is still more heavily focused on the inflation numbers – and with both wage growth and services inflation likely to stay sticky in the near term, the market may be getting ahead of itself in pricing a May rate cut. A lot will depend on the next couple of inflation and jobs reports, but for now, we're sticking to our call of an August rate cut with 100bp of easing in the second half of 2024.

## Asia week ahead: Inflation readings across the region

Next week, we expect China's December inflation reading should move slightly back up towards zero following its recent descent into negative annual rates. Elsewhere, India's inflation will likely remain around 5.5% YoY, while in Australia the comparison with last years spike should be benign enough to see the inflation rate decline

### ✓ China: Chance December inflation figures move slightly back up towards zero

China's December inflation reading will be carefully watched following its recent descent into negative annual rates, and there is a chance it will begin to move slightly back up towards zero. For all the talk of pork prices being the culprit of China's negative inflation, this was actually something that happened a year ago when prices spiked on the back of a swine fever outbreak. Wholesale pork prices in recent months have been extremely stable, falling only very slightly in December from November.

What is different this month is that pork prices in December 2022 had already begun to fall and this will help inflation to edge back towards positive readings. Last month's figures were also hit by lower gasoline prices – and while the average gasoline price in China in December is probably a little lower than November, it hasn't fallen quite as much, and the implied month-on-month overall inflation reading could be a lot closer to zero than the negative November figure.

### **India: Inflation to stay at 5.5% YoY**

We also have Indian December inflation on the calendar next week, where there has been a broad-based decline in the prices of food, especially seasonal vegetables, potatoes, tomatoes and onions. This was also the pattern last year, so the impact on the inflation rate will be pretty small, if any, and should remain at about 5.5% year-on-year.

### **Australia: Inflation rate could decline substantially**

Australian inflation is also coming up. Last year's surge in energy and food prices on the back of unseasonal cold and wet weather is unlikely to be repeated, at least not to the same extent, though we note that recent flooding in Queensland could still push up the prices in some areas. Even so, the comparison with last year's spikes should be benign enough to see the inflation rate decline – perhaps substantially.

## Key events in EMEA next week

Next week's focus will be on Poland's first MPC decision of this year, where we expect rates to remain unchanged as the council awaits more information on inflation developments. Elsewhere, we estimate that prices will remain unchanged in the Czech Republic, translating into a stable inflation figure of 7.3% YoY

Source: Shutterstock

### ✓ Poland: Rates to remain unchanged

**Current account (Nov): €2074mn**

We expect yet another hefty surplus on the current account balance in November on the back of sizeable surpluses on goods and services trade balances still being supported by lower prices of energy imports. According to our estimates, exports fell by 1.6% year-on-year, while imports shrank by 9.6% YoY compared with +1.6% YoY and -8.4% YoY respectively in October. In such a scenario, the 12-month rolling current account surplus should improve to 1.5% of GDP from 1.1% after October.

**NBP rate (Jan): 5.75% (unchanged)**

The first MPC policy sitting this year will be a non-event, as rate setters are widely expected not to make any policy decisions in January. The National Bank of Poland (NBP) rates will remain unchanged (with the main policy rate still at 5.75%) as the Council awaits more information about

inflation developments. On the one hand, the short-term inflation outlook looks more favourable than projected in the November NBP staff scenario as authorities have extended measures “freezing” electricity and gas prices for households until mid-2024. On the other, the 2024 draft budget prepared by the new ruling coalition envisages an even higher fiscal gap and borrowing needs than the already record-high imbalance proposed by the former Morawiecki government in September. We expect the MPC to stick to wait-and-see approach until at least March, when the new macroeconomic projections will be prepared.

## ✓ Czech Republic: Last big inflation number

We estimate that prices remained unchanged in December, which translates into a stable inflation figure of 7.3% YoY, the same as in November. We see core inflation falling further from 3.9% to 3.7% YoY. The main upward drivers here are food prices. Otherwise, other items are stable or falling. Fuel prices in particular fell massively in December, where the drop in oil prices has been most pronounced. The risk here is housing prices, including energy prices, which showed a surprise increase in November. In January, the comparative base from last year and the much smaller month-on-month growth compared to last January should come into play. For now, we estimate 2.8% YoY, but we will see more after the December number.
