Key events in developed markets next week

The Bank of England looks set to raise rates by another 25bp on Thursday. Although it will imply further tightening is possible, we think this hike will likely be the last. In the US, a flood of inflation data over the coming week is expected to show the disinflation trend

Source: Shutterstock

✓ US: Upcoming data set to show the disinflation trend is firmly in place

After this week's 25bp interest rate increase from the Federal Reserve, we think we are at the peak and the next move will be interest rate cuts in late 2023. The long and varied lags involved in monetary policy changes – coupled with a rapid tightening of credit conditions resulting from recent banking stresses – mean the headwinds for the US economy are intensifying. Job lay-off announcements and weak business and household sentiment already indicate there are real-world impacts with the upcoming data flow set to show that this is now weighing on price pressures.

We will get import price inflation, producer price inflation and consumer price inflation over the coming week, and all three are set to show that the disinflation trend is now firmly in place. Import prices are falling in year-on-year terms already and we expect PPI to edge close to 2% YoY. CPI is still running well above the 2% target, but we do at least expect the annual to slow to 4.9%, having peaked at close to 10%.

Keeping in mind that the Federal Reserve has a dual target of 2% inflation and maximum employment, we expect to see recessionary forces push inflation close to target by year-end, with unemployment rising. We think this could result in 50bp interest rate cuts at both the November and the December FOMC meetings.

UK: Bank of England set for 25bp hike but we're near the peak

After some hawkish inflation and wage data last month, the Bank of England looks poised for another 25 basis point rate hike on Thursday. Admittedly when you scratch beneath the surface, this data wasn't a total disaster for the central bank. For one thing, CPI has outpaced the Bank's forecasts because of food and core goods prices, neither of which will be viewed as long-lasting trends. The BoE's own "Decision Maker Panel" survey of CFOs has also been repeatedly pointing to lower price and wage pressure.

We doubt the Bank will want to shut down its options on Thursday – another unhelpful set of data over the coming weeks would pile on the pressure for them to do more in June. Expect the Bank to retain its data-dependent guidance that implies further tightening is possible – though the clear dovish risk is that the Bank “does a Fed” and waters down this guidance further, perhaps removing the bit about further tightening. Either way, we think Thursday's hike is likely to be the last. [Catch up on our latest preview here](#)

Asia week ahead: Inflation readings from China and India

Next week's data calendar features several inflation reports from China, India, and the Philippines. Meanwhile, we will also get trade data from China and Taiwan plus labour data from South Korea

Inflation to ease in India

April inflation data in India will likely show another steep decline, taking the inflation rate closer to the mid-point (4%) of the Reserve Bank of India's (RBI's) inflation target. We expect the CPI index for April to rise by 0.4% month-on-month. That is a full percentage point lower than the comparable increase in April 2022, and should take the inflation rate down to 4.7%.

At these levels, a debate about the timing and extent of future easing of the repo rate by the RBI will likely start, and this could weigh on the Indian rupee, though any such change would ultimately be supportive of growth. We still expect easing to commence later this year, perhaps as early as the third quarter.

Trade data from China and Taiwan

China and Taiwan will release trade data next week. Due to weak external demand, we are expecting exports for both economies to slow. However, we note that China's electric vehicle exports could see an increase on a yearly basis as Chinese car manufacturers are looking to exports as their key strategy, on top of organic growth in the domestic market.

Jobless rate to rise in Korea

The jobless rate in Korea is expected to rise in May with sluggish construction and manufacturing hiring. Meanwhile, the government's job programme likely added more jobs.

Loan growth and price figures from China

Next week, China will also announce loan growth, which should be growing mildly starting from April as Chinese banks usually book loans in the first quarter. Slower loan growth in April should not be interpreted as low loan demand as most of the loans for the year have already been booked.

Meanwhile, China should continue to show modest CPI inflation, and weaker manufacturing activities should continue to put deflationary pressures on PPI.

Philippine GDP to slow as inflation bites

The Philippines will release first-quarter GDP data next week and we are expecting a year-on-year expansion of 6.5% down from 7.2% previously. Growth will be supported by household consumption, although we note a slowing trend as elevated inflation saps some purchasing power. Meanwhile, capital formation will likely be subdued given moderating bank lending after Bangko Sentral ng Pilipinas (BSP) sustained rapid-fire rate hikes. GDP growth should continue to decelerate in the coming quarters as still high inflation and the fallout from central bank rate hikes take hold.

BSP will see both inflation and GDP data ahead of its policy meeting on 16 May.

Key events in EMEA next week

Next week's EMEA calendar features the Romanian National Bank's policy rate decision, and we expect the key rate to remain unchanged at 7%. In Hungary, we see only minor easing for April inflation, with core inflation remaining elevated on a monthly basis

Source: Shutterstock

✓ Hungary: April inflation prints to show only minor easing

We are hopeful that the upcoming week will bring some positive news for Hungary. First of all, we expect the trade balance to remain in surplus territory thanks to depleting import activity on dropping domestic demand and energy consumption. In parallel, we see further positive impacts on non-energy exports due to the car and electric vehicle battery manufacturing sectors.

With rather weak economic activity still, the budget balance will have a hard time showing a material improvement in April. However, as the March deficit was partly a result of one-off items, excluding those will improve the picture slightly.

The star of the week will be the April inflation print. We see the month-on-month headline inflation showing only minor easing. Slightly lower fuel and energy prices accompanied by some easing price pressure in food prices will be almost entirely wiped out by seasonal factors and additional price increases in services, mainly in telecommunication and leisure activities. The latter will be the main reason why core inflation remains elevated as well on a monthly basis. However, base effects will help to improve the big picture, thus we see both the headline and the core year-on-year

readings showing convincing drops. However, the still 24-25% YoY inflationary environment gives little cause for celebration.

✓ Romania: NBR set to keep rates unchanged

The National Bank of Romania (NBR) will announce its latest policy rate decision on 10 May. We expect the key rate to stay at 7.00% with no forward guidance. We think that a clear consolidation of the current disinflationary trend will be needed before the central bank makes its next decision; we're expecting a cut in the first quarter of next year. Real positive rates (i.e. inflation below the key rate) might be the trigger for action. Our inflation estimates indicate that this could be the case in February-March 2024 when inflation should dip below 7.00%.

✓ Czech Republic: Scope for a rate increase remains limited

In the Czech Republic, we think headline inflation decreased further in April from 15% to 13.5% and core inflation also softened. The recent Czech National Bank meeting sent a clear hawkish message in the sense that three board members voted for a 25bp rate hike. In our view, the scope for a rate increase is limited until we see the overall economic wage growth exceeding 10% YoY.
