Key events in developed markets next week

Inflation data is at the forefront of developed markets next week, as US core measures could show signs of rising at the fastest rate in over ten years. We'll also be keep an eye on German macro data as well as Scandi inflation

Source: Shutterstock

✓ US: Balancing the risks

The US economy continues to grow strongly, and there is evidence of rising inflationary pressures. Wages are ticking higher, while higher oil prices and tariffs also suggest inflation is likely to persist above the Federal Reserve's 2% target for longer than what we thought just a few months ago. This week we expect to see core consumer price inflation rise to 2.3%, and then break above 2.5% in the next couple of months – the fastest rate of inflation for over ten years.

Unsurprisingly, the Fed is forecasting three interest rate rises next year after one final move for 2018 in December. There are a number of Fed officials scheduled to speak this coming week, and we will be looking to see whether the risks appear skewed to the upside or the downside in terms of Fed policy. For now, we think the risks are balanced, given some uncertainty is likely following the mid-term elections.

✓ Germany: Moment of truth

It will be the first moment of truth for the German economy, with hard macro data for July

showing whether the rebound, which was suggested by confidence indicators, actually materialised. Elsewhere, the minutes of the European Central Bank's September meeting should shed some light on the ECB's current thoughts on their path.

Sweden and Norway's inflation data

Inflation data will be key in Sweden and Norway this week. We expect headline measures to remain elevated, and also see somewhat higher core inflation in Sweden.

The new monthly GDP indicator in Norway will also be published (for August) – it's hard to tell with such a new data series, especially over the summer months, but we think the data will show continued solid expansion.

And of course, the slow-motion political drama in Sweden continues as the leader of the Conservative Party, Ulf Kristersson, has now received the mandate to propose a new government, but cobbling together a workable governing coalition still looks like a daunting task.

Asia week ahead: Will Singapore's central bank tighten policy again?

Chinese markets will be back in action after a week-long holiday and September economic data also starts to come through. But the highlight of the week will be Singapore's GDP numbers, where a significant slowdown will undoubtedly take the air out of central bank policy hawks

Source: Shutterstock

China back in action

After a soft September, the US dollar seems to be regaining its strength against most G10 and emerging Asian currencies. While there is nothing on the calendar to unsettle this, but all eyes will be on the People's Bank of China's yuan fixing after the holiday. The USD/CNY fixing ground was higher in the week before the holidays, and the market spot almost followed suit. The US dollar's

comeback and heavy stock market sell-off in Hong Kong this week, possibly spilling over to Mainland China suggests CNY will resume trading on a weaker note.

China's September data also influences the markets, starting with the foreign reserves data to be released over the weekend followed by trade and monetary data over the course of the week. Unlike the CNY devaluation in 2015, when reserves experienced significant outflows, they have been pretty stable around \$3.1 trillion despite the steep yuan depreciation this year. We believe this state of affair prevailed in September, as the trade war impact has yet to show up in the real activity and exports continue to grow by the high single-digit pace.

China's foreign exchange reserves have been stable

Source: Bloomberg, ING

Likely inaction by Singapore central bank

Singapore's advance GDP estimate for 3Q18 is due most likely towards the end of next week, and the central bank will also unveil the outcome of its semi-annual policy review around the same time as the GDP release. A sharp slowdown in manufacturing in the July and August release looks likely to extend to September based on a two-year low (Nikkei) manufacturing PMI. This is likely to dent the GDP growth, which is why we have cut our estimate of 3Q growth to 2.6% year on year from 3.3%, a slowdown from 3.9%.

The central bank shifted the policy from neutral to tightening at the last meeting in April – a move from zero percent Singapore dollar trade-weighted exchange rate (S\$-NEER) policy band appreciation to a 'modest and gradual' appreciation path. The Singapore dollar's outperformance in the global currency sell-off since the last central bank policy review has pushed the S\$-NEER towards the strong end of the policy band, fuelling expectations of more policy tightening in October. However, we don't see any compelling reasons for that, as consumer price inflation in Singapore continues to be among the lowest in Asia and GDP growth is also poised to slow. A significant GDP slowdown will certainly take the air out of policy hawks.

ING estimate of the MAS's S\$-NEER policy band

Source: Bloomberg, ING

Inflation risks resurfacing in India, slowly but surely

As the Reserve Bank of India looks set to tighten monetary policy again at the meeting on Friday, 5 October, the central bank will have no reasons to relax ahead of the September consumer price inflation release. The August inflation fall below 4% (the mid-point of the RBI's 2-6% medium-term target) appears to be a one-off. Our estimate for September is that it will rise back above 4%. Even as food price inflation continues to be low, the pass-through from increasing global oil prices will intensify due to a weak rupee and core inflation, which strips out food and fuel prices, remains high.

Without vigorous policy tightening or additional support measures, we find it hard to forecast the rupee regaining any ground in the near-term. We have just raised our end-2018 USD/INR forecast to 75 from 73.5.

Recent dip in India's CPI inflation will be transitory

Article | 4 October 2018

Key events in EMEA and Latam next week

Highlights next week include contrasting inflationary reports from Romania and the Czech Republic and two rating agency reviews on Poland

Source: Shutterstock

✓ Rating agency reviews for Poland

The data calendar in Poland is quiet next week, but two rating agencies will review their assessments next Friday. We don't expect any change either from Fitch (A-, stable outlook), or Standard & Poor's (BBB+, positive outlook). A potential upgrade from S&P should have a limited market impact as it has a lower rating compared to the others anyway.

✓ Czech's summer lull may play on industrial data

September inflation might accelerate further, partially due to higher food and fuel prices, but seasonal factors are pushing prices down slightly in monthly terms.

We think industrial production will disappoint a little, as July's figure was supported by a holiday effect, which pushed annual dynamics higher and will not be repeated in August. Retail sales shouldn't bring any positive surprises, though car sales could benefit from one-off purchases before new emission rules kick in. Meanwhile, the unemployment rate is expected to fall slightly in September to 3% based on typical seasonal developments.

✔ Romanian inflation to be in line with central bank forecast

We expect September CPI to decline by 0.4 percentage points to 4.7% year-on-year as the statistical base impact (last year saw an excise duty hike for fuel) more than offsets the recent increase in oil prices. This is in line with the latest National Bank of Romania forecast from August.

✔ Hungary: Positive budget balance news

In Hungary, we expect the government balance to improve - the European Commission transferred HUF 200-300 billion for some pre-financed projects under the scope of operative programmes which are not affected by suspended payments. On Tuesday, we'll see headline inflation jumping to 3.6% YoY on the back of higher oil, food and tobacco prices.

✔ Another eventless National Bank of Serbia meeting

We expect the National Bank of Serbia to stay on hold at 3.00% as the CPI outlook looks less benign, especially after the recent rise in oil prices. Serbian dinar strengthening pressures have subsided, GDP growth has surprised to the upside and the fiscal prospects appear rather expansionary. The next move is likely to be a rate hike, but not before the European Central Bank's first normalisation step.
