Key events in developed markets next week

Germany suffered a disappointing end to 2018, and recent US numbers haven't been too great either. But amongst the bundle of hard data we receive next week, we think there is some positive news at the ready for both countries

Source: Shutterstock

US: On the rebound?

Some of the recent US economic numbers have been pretty disappointing, raising questions about the 2019 economic outlook. The plunge in December retail sales caught everyone by surprise and the soft January industrial production figures were also a shock. The government shutdown may have had an influence, and there continues to be some scepticism over data quality due to statisticians being furloughed for much of late December and January.

Given the strong jobs market and robust consumer confidence, we should expect a significant recovery in retail sales while the weakness in January's industrial output should be reversed completely in February. That softness was caused by a combination of weaker auto output relating to short-term plant shutdowns, lower defence output due to the government shutdown and the weak oil price leading to a downshift in pumping. Meanwhile, consumer price inflation should hold steady, but we continue to believe that core inflation will grind higher through the year due to supply constraints, strong demand and rising wages. As such, we continue to forecast a Federal Reserve interest rate rise late in the summer versus futures markets that are pricing the next move to be a cut in 2021.

☑ Germany: Positive news brewing...

We will finally get the first hard data for the year, with industrial production and trade data for January. After a disappointing end to 2018, some positive news from the German economy should be in the offing.

Asia week ahead: Engineering a soft Chinese landing

China's economic data will provide a sense of GDP growth in the first quarter of 2019. Indian inflation numbers are out too, though we don't expect it to become a policy problem this year. Elsewhere, trade releases dominate the calendar in the region

Source: Shutterstock

China's monthly data dump begins

China's monthly economic data dump for February has just started and will continue to come through for most of next week. The data is distorted by the Lunar New Year holiday in February, so it should be read in conjunction with the January figures. The Bloomberg consensus estimates point to weak growth for most activity indicators, suggesting a further slowdown in China's GDP growth this quarter.

The authorities are engineering a soft-landing of the economy with fiscal pump-priming

But it all depends on reaching a trade deal with the US. The news on that front has been increasingly positive, and if things stay that way, should counter negative market impact from the hard data.

Indian inflation - race to the bottom is over

We also get most of India's February economic data next week. All the excitement here lies in the inflation rate after it hit the low-end of the central bank's 2-6% target in January.

We don't see any further downside from here as the food component - the main source of disinflation last year is about to snap its declining streak. Among other drivers, the effect of rising global oil prices to domestic fuel prices and a significant fiscal thrust to domestic demand will sustain the upward pressure on prices. That said, we don't expect inflation to become a policy problem again this year. But this doesn't mean the central bank will have more room to cut policy rates further.

Among other Indian data, trade and industrial production are likely to underpin further moderation of GDP growth in the current quarter. Like Indonesia and the Philippines, high trade deficit remains a key negative for the rupee. With rising political uncertainty, currency appreciation isn't going to be a lasting relief for investors in the Indian markets.

2.5% ING forecast of India's inflation
In February

Setter trade news for Indonesia, but not Philippines

Trade releases in Indonesia and Philippines matter for their currencies. We anticipate firmer growth in Indonesian exports in February pushing trade deficit to its lowest in the last five months. The Indonesian rupiah has been recovering this year from the heavy losses of 2018, thanks to the government's measures to curb imports and deficit.

The Philippine peso has also been in consolidation mode this year, but there hasn't been any relief for the currency from external payments. The trade deficit continues to be high, running around \$4 billion per month, and remittances from overseas Filipinos, which historically covered for the deficit, have been insufficient, running around \$2.5bn. Next week's trade and remittances releases for January are unlikely to show any departure from these trends.

Key events in EMEA and Latam next week

Turkey's fourth-quarter growth slowdown, Romania's spiking inflation and a central bank meeting in Poland are just a few of the things to watch out for in the EMEA region next week

Source: Shutterstock

✓ Turkey: Consumption and investment responsible for slowdown in fourth-quarter growth

The fourth-quarter growth slowdown is likely to be pronounced as tighter external and internal financial conditions weigh on consumption and investment, though strong net exports should partially offset the contraction in domestic demand. We expect -3.0% year-on-year GDP in 4Q18, translating into 2.5% for the whole year.

Romania: Inflation to spike higher

We expect CPI to inch up by 0.8% month-on-month in February, pushing the year-on-year reading to 3.8% from 3.3% previously. The Romanian leu has weakened by 0.9% on average versus the euro (relative to January), which should be reflected immediately in prices linked to the single currency, like phone bills. Adding to upside pressures are higher oil prices and companies passing on sectorial taxes - enacted in January. We also expect core inflation to increase by 0.2 percentage points to 2.7% year-on-year.

Czech Republic: Subdued car sales and production will weigh on domestic data

January CPI surprised on the upside, but unless volatile food prices accelerate (again) above expectations, we should see February's headline inflation around 2.6% YoY - close to the Czech National Bank's (CNB's) estimate.

Retail sales could disappoint due to a high base effect from January 2018 and subdued cars sales, which saw a double-digit fall in January. Also, car production remained 11.0% below that of January 2018, meaning that an improvement in industrial production is unlikely to materialise and the year-on-year growth rate will likely remain close to zero.

✓ National Bank of Poland: A look into why growth and inflation forecasts were revised down

We expect a CPI recovery from 0.9% to 1.3% YoY in February, slightly above the market consensus (1.2%). The higher reading is driven mainly by food prices, which should add 0.3 percentage points to the headline figure. We also expect core inflation to increase slightly from 0.9% to 1.0% YoY. Alongside the February readings, the statistical office (GUS) will also provide an update to the consumer basket structure, but we expect index recalculations to have a limited impact on headline figures in both January and February.

Meanwhile, the National Bank of Poland (NBP) will provide information regarding its forecast revisions. According to the Monetary Policy Committee's statement from its March meeting, the GDP forecast were revised upwards from 3.6% to 4.0% YoY in 2019 (due to a fiscal impulse) and 3.4% to 3.8% YoY in 2020. The analysts' conference should provide greater insight into components such as private consumption and households savings. While we don't dispute the forecast for 2019, we see the 2020 estimate as optimistic.

The CPI estimate for 2019 was lowered from 3.2% to approxiamtely 1.7%. The NBP cut its assumptions as a result of electrical energy prices and lowered its trajectory for core inflation. For 2020, the forecast were lowered from 2.9% to 2.7%. We see both forecast as reasonable.
