Key events in developed markets in the coming week

In developed markets, UK data has a big week ahead with growth expected to come in as another headache for the Bank of England. We also advise watching Swedish house price data, which could give an insight into the uncertainty surrounding their economic outlook

Source: Shutterstock

✓ Big week for UK data as economic risks build

There are three things to watch in the UK in the coming week. First up, it's the jobs report where we expect wage growth (ex-bonuses) and jobs growth to slip back further – although both are mainly a function of base effects. Pay had an exceptionally bad start to 2017, which has been flattering the year-on-year comparison through the early parts of this year. Importantly, the Bank of England (BoE) remains confident wage pressures will continue to build.

But it's not quite the same story for inflation, due to be released on Wednesday. While headline CPI is being kept aloft by higher oil prices, core inflation is likely to remain at 2% as the impact of the pound's post-Brexit plunge continues to wear off.

Increasingly though, we think the bigger headache for the BoE is likely to be growth. Following a dip in June, Thursday's retail sales data may stabilise. But much of the recent improvement has been down to the sun, and as normal British summer weather conditions are restored, the cracks in the retail sector are likely to resurface. Incomes remain under pressure, while the increased [talk of a 'no deal' Brexit could dampen confidence over coming months](#). For this reason, we don't

expect another Bank of England rate hike before the UK leaves the EU next year.

Norges Bank to reiterate hawkish stance

Norges Bank (NB) meets on Thursday and while we don't expect a rate hike this time around, the Norwegian central bank is likely to reiterate its intention to raise the policy rate by 25 basis points to 0.75% in September. This should support the krone and Norwegian rates, as markets are still some way from fully pricing a September hike from the NB. Elsewhere, Swedish house price data for July are worth watching as the housing market remains a key source of uncertainty to the Swedish economic outlook, though we don't expect prices to have moved much over the summer holiday period.

German GDP data could still surprise

After this week's disappointing industrial data, 2Q18 GDP data could still surprise to the upside and outperform the eurozone's 0.3%.

Asia week ahead: Bank Indonesia pauses tightening

So far so good, not much of an impact of the China-US trade war on Asian exports in July. But that's no reason to relax just yet - the trade war has just started. It will take a while for the impact to trickle down to the real economy and Asia won't be immune to this

6.4%

China industrial production growth

ING forecast for July, up from 6.0% in June

➔ More Chinese economic data for July

As expected, China's July trade data showed little impact from the US-China trade war in the initial phase of \$34bn of tariffs. The remaining economic data for July – industrial production, retail sales, fixed asset investment, and monetary indicators – is likely to reinforce the same message.

We increase our industrial production growth forecast to 6.4% year on year for July from the 6% in June on the back of firmer exports. Investment and monetary data will shed light on whether recent liberalisation measures in areas of financial securitisation and asset management have started showing results.

5.25%

BI policy rate

ING forecast, no change from current level

➔ Indonesian central bank tightening cycle isn't over just yet

Indonesia's central bank will hold its policy meeting next Thursday (16 August). After a cumulative 100 basis point of policy interest rate hikes in May and June, Bank Indonesia paused tightening at the July meeting. We aren't looking for any policy moves next week, and Indonesian economic data since the July meeting supports our call. However, this doesn't mean that the Indonesia tightening cycle is over just yet.

Most of the policy tightening so far was aimed at curbing the weakness of the Indonesia rupiah, while inflation has been running in the lower half of 2.5 - 4.5% policy target. A likely swing in the trade balance to a deficit in July from a surplus in June could reignite the currency pressure.

July trade data is also due next week (15 August). The rupiah will come under pressure once the trade war begins to hurt exports. Moreover, higher tariffs together with the currency weakness will pressure inflation higher. and we continue to expect one more 25 basis point hike later this year.

5.2%

Malaysia 2Q GDP growth

ING forecast, down from 5.4% in 1Q

➔ Singapore and Malaysia report second quarter GDP

Singapore reports revised GDP figures for the second quarter. The advance estimate released in July revealed a slowdown in GDP growth to 3.8% YoY from 4.3% in the first quarter. But the subsequent data showed strong industrial production growth which leads us to revise upwards our second quarter growth to 4.0%.

But that's not important. We think the non-oil domestic exports figure for July - the first hard activity data for the current quarter will be more significant for GDP growth amid growing global trade tensions. June NODX was exceptionally weak with 11% month on month fall (seasonally adjusted), so we expect some clawback in July.

As for Malaysia, we forecast a slowdown to 5.2% YoY in the second quarter from 5.4% in the previous quarter - which is still among the strong growth economies in Asia. We infer from widening external trade surplus that net exports, which displaced domestic demand as GDP growth driver in the first quarter, remained in the driving seat.

We think the best of GDP growth in Asian economies is over and the global trade war is going to depress growth going forward.

4.8%

India CPI inflation

ING forecast for July, down from 5.0% in June

➔ Inflation and trade figures matter for India's central bank

India's consumer prices and trade data for July are due. A likely dip in CPI inflation below 5% may come as a relief for the central bank's tightening policy. However, this tells us more about what happened a year ago than what's happening now - the high-base year effect.

We don't expect any moderation in key CPI drivers of food, fuel and transport prices. Typically, July is the month with a sharp month-on-month rise in the food components in the year.

On the trade side, the widening trade deficit trend underway since February this year looks set to remain in place. We forecast a further widening of the trade deficit to \$16.9bn in July from \$16.6bn in June as a result of slower export and faster import growth. Oil contributes to almost half of the trade deficit.

We don't expect overhang on the Indian rupee from widening trade deficit and elevated inflation to lift anytime soon. Hence our forecast of continued central bank policy tightening ahead.

Key events in EMEA and Latam next week

Key readings on second-quarter GDP take centre stage in EMEA and Latam next week. Poland and the Czech Republic should see good numbers thanks to strong domestic demand while Hungary could see a mild slow down

Source: Shutterstock

✓ Two key events to watch in Hungary

In Hungary, there are only two events to watch out for next week, but they're important. On Tuesday, the Statistical Office releases the advance estimate of 2Q18 GDP. We expect a mild deceleration to 4% year-on-year, as both the industry and retail sectors have shown some sign of softening recently.

On Friday, the rating agency Standard & Poor's will review its sovereign debt ratings. In our view, the potential for an upgrade is 50/50. S&P gave a positive outlook exactly a year ago, and the important metrics are looking good. But recent market turmoil and deficit numbers (the EU-transfer story) could prevent the agency from acting. Neither outcome (confirm or upgrade) would come as a surprise, so we only expect a limited market reaction after the decision.

✓ Double-digit investment growth could boost Polish GDP in 2Q

We expect 2Q18 GDP to grow by 5.3% year on year based on solid consumption and double-digit investment growth. The contribution from net exports should be positive after a -1.2% deficit in the first quarter, which was likely a statistical anomaly. Data on the labour market is expected to

confirm a moderation of wage pressures in the enterprise sector - we forecast stable salary growth of 7.4% YoY.

Czech Republic reliant on domestic demand as growth driver

A flash estimate for 2Q Czech GDP should show growth accelerated slightly, in quarterly terms, after the 0.5% reading we saw in the first quarter. However, due to a high base rate and negative net exports, the annual rate should decelerate towards 2.5% - which would be the lowest YoY reading this year.

This shouldn't be taken as negative news as both household consumption and investments are likely to remain solid. As such, domestic demand will be the main driver of overall economic expansion this year, while net exports will detract from growth. This is due to weaker export activity as well as strong imports, predominantly driven by higher domestic demand and import-intensive investments.
