Asia week ahead: Central banks to take cue from the Fed

Central banks of Japan, Taiwan and Indonesia meet next week amid rising infection rates in Asia and mounting concern about the spread of variants. More...

Key events in developed markets next week

The Fed meeting is the highlight next week, and while we don't expect much action at this stage, we should see more insights into the inflation situation. Also, look out for Eurozone industrial production, Germany and UK CPI, as well as a Norges Bank meeting

Source: Shutterstock

✓ US: Fed to give more inflation insights but no QE tapering yet, and watch for retail/industry data

The upcoming week will be dominated by the Federal Reserve policy meeting. No changes are expected, but we will be getting updated forecasts. It will be interesting to see if there are any signs of cracks in the Fed's stance that elevated inflation readings are "transitory".

With headline inflation at a 13 year high and core inflation at a near 30 year high, we suspect they will be a little more balanced on their assessment, especially given evidence that labour costs are starting to pick up and inflation expectations series are also clearly on the rise.

Nonetheless, the disappointing jobs numbers are likely to mean the Fed continues to believe it is too early to discuss QE tapering. Some Fed officials are tentatively moving in this direction. Still, it is likely to take another couple of months of strong activity, elevated inflation and rising employment costs for it to actually happen.

We think the Federal Reserve's Jackson Hole conference in late August will fire the starting gun.

This will be formally acknowledged at the September FOMC (the next forecast update from the Fed) with a QE tapering announcement at the December FOMC.

In terms of the data, we will be closely following retail sales and industrial production. The former could print a negative number given the slowdown in auto sales after a strong run. Vehicle prices are surging, and output is lacking, given automaker supply chain issues.

Outside of autos, the spending numbers should remain firm given healthy confidence, strong income growth and rising employment. However, people are increasingly moving away from buying physical things and instead are spending a greater proportion on services, such as travel, hotels and entertainment, which are not included within retail sales.

Industrial production should be firmly based on surveys such as the ISM report. New orders are strong, and the backlog of orders are at record highs. The question is, can the supply capacity of the economy meet that demand given current supply chain bottlenecks and labour market issues? Consequently, we expect this to translate into higher prices, which will be highlighted by rising producer price inflation.

Developed Markets Economic Calendar

Key events in EMEA next week

No changes expected from Turkey's central bank meanwhile inflation, current account and employment data from Poland are key releases to watch

Source: Shutterstock

✓ Turkey: Little change expected

According to Turkey's central bank its forecast path in the inflation report show end of the third quarter or the beginning of the last quarter for “the significant fall” in the headline inflation. Given that currently low ex-post real rates and ongoing risks to outlook leave little room to act, we do not expect any rate change from the CBT in the June meeting.

However, improvement in inflation should allow the bank to come up with a moderate easing with a likely first move in October

✓ Poland: Continued inflation pressure, higher CA surplus, and employment boost all incoming

On Monday the Polish central bank will publish the April balance on the current account. We expect an increase of the surplus to €1.3bn, from €0.9bn in March (consensus at €1.2bn). On Tuesday the final print should confirm May CPI at 4.8% (as in the flash estimate), indicating continued strong pressure from the core and the low base for fuel prices.

On Friday, we'll get labour market data and we think we'll get higher employment in May as

restrictions were eased, transferring to acceleration of the YoY growth to 2.5% from 0.9% the previous month (market consensus at 2.4%). The wage growth should be at 10% YoY compared to 9.9% in April and the consensus at 10.2%.

EMEA Economic Calendar

Country	Time	Data/event	ING	Survey	Prev.
Monday 14 June
