Key events in developed markets next week

Multiple Fed speakers next week will likely signal a pause in the tightening cycle while remaining upbeat about the economic outlook. To fire things up,...

Source: Shutterstock

✓ US: Calmer Heads

The second week of trading in 2019 has seen less volatility following soothing words from Fed Chair Jerome Powell and a stellar US jobs report, both which helped ease fears that the US economy's bull run will soon come to an end. Positive sentiment regarding the US-China trade talks has also been supportive for risk appetite, while policy easing from the Peoples' Bank of China has reminded us that policymakers are alive to the risk of a downturn.

The coming week will see more Federal Reserve officials make appearances, and the message is likely to continue signalling a pause in the Fed's policy tightening path in 1Q, though officials will probably remain upbeat on the US's economic prospects. This should be apparent in the data too, although the ongoing partial government shutdown will reduce the number of releases.

Retail sales will be published but given the Census Bureau is effectively shut for business, this risks being delayed. If published, headline sales will be depressed by the plunge in gasoline prices, but aside from this, the story should be strong given firm car sales and rising real incomes. Industrial production, published by the Federal Reserve, is set to be released. We suspect manufacturing output held up well, but that mining output will have been impacted by reduced drilling resulting from the plunge in oil prices since October. Taking this all together, we suspect it is consistent with

the economy having expanded at around a 2.5% annualised pace in the final quarter of the year.

✓ Little signs for a eurozone growth comeback

Industrial data from France and Germany has been dismal for November and we expect the same for the eurozone as a whole. That would confirm a picture of a weak industrial sector that does not show many signs of a bounce back in economic growth.

✓ Germany: Any hope for a fourth quarter rebound?

The most interesting release next week will be the first estimate for annual GDP growth in 2018, which will also include a first 'guestimate' for growth in the fourth quarter. Latest data releases have dented hopes for a quick rebound of the German economy after a disappointing third quarter.

✓ UK MPs set to vote down Theresa May's Brexit deal

On Tuesday, Theresa May's Brexit deal will finally be put to members of Parliament (MPs) to vote upon, and as things stand, it looks set to be defeated by a fairly heavy margin. If that happens, the Prime Minister will have three days to bring forward a new plan, and at this point, MPs will get a say on what direction to take. The Labour Party has also suggested it will put forward a vote of no confidence in the government, in the hope of triggering an election.

Nobody really knows exactly where the next couple of weeks will take us, but time is running out and an extension to the Article 50 process looks increasingly likely. [Find out more here.](#)

✓ Swedish inflation data and another vote in parliament

We expect headline inflation in December to remain around the 2% target, while core inflation will remain well short at 1.4%. Over the coming months, headline inflation is likely to fall back further as the recent drop in energy prices feeds through. Core inflation meanwhile may edge up a little over the first half of the year, but looks unlikely to reach 2% anytime soon as wage growth remains anaemic.

At the same time, the political impasse in the Swedish parliament is set to end one way or another. Parliament is set to vote on a new government on Wednesday. If that vote is unsuccessful, another final vote will take place the following week, and if that also doesn't yield a new government then new elections will take place, most likely at the end of March or early April. Over the holidays, the two main candidates (Social Democrat Stefan Lofven and Conservative Ulf Kristersson) both sought the support of the two centrist parties holding the deciding votes, but as yet, neither appear to have reached a deal. It remains unclear which, if any, side the centrists will choose, so all three outcomes (centre-left government, centre-right government, or new elections) remain on the table.

✓ Canada: Energy prices will weigh (again) on December's headline inflation

Headline inflation in December should be pulled lower by weaker energy prices, though the drop won't be as large as that seen in November. Average prices (USD/bbl) for both Brent and Western Texas Intermediate (WTI) were lower in the last month of 2018, but the price decline wasn't as

sharp compared to what we saw in November.

With oil production cuts in Alberta – which helped double the average price (USD/bbl) of Western Canadian oil in December, we should see headline inflation down only slightly (0.1%) on the month.

We've revised down our annual CPI projection for 2018 to 2.2%, due to lower-than-expected inflation in the later months of 2018.

Asia week ahead: Trade ends 2018 on a weaker note

So far, the December data out from the region has indicated that 2018 has ended on a weaker note for Asian trade. The message from the raft of trade data...

Source: Shutterstock

➔ Trade data dominates calendar

The week kicks off with trade data from China, followed by India, Indonesia, and Singapore.

Given that both, Korea and Taiwan posted negative export growth numbers last month, we can infer that the consequences of the US-China trade war are slowly working their way through the regional and expect upcoming trade releases to reinforce the impact.

Undoubtedly, China data will be watched closely as the latest round of trade talks have ended on a

positive note but without much material progress. Will there be anything in this report to cheer President Trump? Nothing really at all. Judging by China's ongoing widening trade surplus - one month's figures aren't going to make any dent. China's trade surplus with the US surged 17% in the first 11 months of 2018 from a year ago even as the total trade surplus was 19% lower on the year.

China's swelling trade surplus with the US

Source: CEIC, ING

➔ Indonesian central bank to leave policy on hold

Indonesia's central bank will meet next week (17 January), and we expect another pause this month after the Bank paused tightening in December following a cumulative 175 basis point hike since last May.

The central bank's tightening was mostly geared toward supporting the currency during the emerging market volatility spikes, while inflation had been well-behaved. 2019 has started on a positive note for the Indonesian rupiah with 1.9% appreciation against the USD so far - the most among the Asian lot, warranting no change to the policy. However, the elevated trade deficit reinforces the currency's continued vulnerability to potential emerging market routs and the increased political risks domestically.

We don't think the central bank's tightening cycle has ended just yet, which is why we forecast one more 25bp hike to 6.25% later in the current quarter before a lasting policy pause.

Indonesia's tightening cycle isn't over just yet

Source: Bloomberg, ING

➔ No respite for the Indian rupee

Like Indonesia, India's high trade deficit hangs over the Indian rupee. But unlike the rupiah, the rupee retains its position of Asia's most underperforming currency coming into 2019. And there is nothing in the forthcoming economic data altering this state of affair.

Under the new governor, the central bank of India has upped its ante towards monetary easing to boost growth as the government wants before the elections in May this year. The consumer price data continues to be friendly for such a policy shift; we estimate CPI inflation to nudge further downwards to 2.2% year-on-year on lower food and energy prices in December.

We have now come to the view that the central bank will keep rates on hold throughout 2019, revised from our earlier view of two 25bp rate hikes in the second half of 2019. However, we won't be surprised by a cut either, given the odds of such a move before elections have now increased. We continue to see the rupee trading up to the 73 levels against the USD in this current quarter.

India: Sharp deceleration in food and energy inflation

Key events in EMEA and Latam next week

In EMEA and Latam next week, the shine may be taken off strong Polish production figures due to weaker wage growth. The recent decline in oil prices will...

Source: Shutterstock

✓ Poland: Solid production, weak wages

The final CPI reading for December should confirm low 1.1% year-on-year growth. Core inflation likely fell by another 0.1 percentage point to 0.6% YoY. We also expect solid industrial production in December (7.3% YoY), above local economists' consensus (4.7%YoY). Labour market information should surprise negatively with weaker wages – we expect a drop to 6.7% YoY from 7.7%.

✓ Hungary: Low oil prices to pull down headline CPI - again

The only - but still key, data release from Hungary is the December inflation reading. After a huge drop last time, we see the headline inflation rate falling to 2.7% YoY. The main reason behind the expected drop is the significant decrease in fuel prices. Still, we expect core inflation to increase to 2.8% YoY, mainly on the back of services.

✓ Romania: CPI to end 2018 within National Banks' target band

Helped by oil prices and a stable currency, the National Bank of Romania (NBR) has managed to tame CPI inflation. We expect inflation to end-2018 at 3.2% YoY. This is quite an achievement,

despite benefiting from positive supply-side developments, as the figure stood at 5.4% in mid-2018. We see core inflation little changed at around 2.5%.
