US: Focus remains on initial claims data

In the US, the main focus will remain on the initial claims data, which are proving to be stickier than hoped. With the reopening of the economy gathering pace we are hopeful that we can at least get down to 2.5 million, but even this is a truly horrible figure and points to more social and economic pain for the country. We will also have a significant amount of April housing data, which we know will be bad given the plunge in mortgage applications for home purchase through March and the fact that collapsing equity markets will have seen many buyers' deposits evaporate in front of their eyes, leading to people pulling out of purchases. However, equity markets have since stabilised and moved higher while mortgage applications have recovered as Federal Reserve support for the credit system and sharply lower mortgage interest rates have helped to turn sentiment.

Eurozone: Confidence figures will be key

Usually one of the least relevant measures now bears particular importance: consumer confidence. With lockdowns coming from absolute lows in April, the question is whether consumers are seeing confidence boosted by the careful first steps of easing in restrictions. This will be important for retail to actually recover as consumers need to be confident enough to go out and spend again, which is uncertain because of both health concerns and economic concerns. Also look out for the

PMI on Friday, which seems set to bounce back from record lows as more businesses have reopened and therefore will be doing better than last month, but the question really is by how much it can recover as many restrictions are still in place.

Busy UK data week to give further glimpse into Covid-19 damage

Expect a packed schedule for UK data next week. On Tuesday, we'll get an initial glimpse at the jobs market situation in March, although the jury is out whether it is too early for the Covid-19 impact to heavily weigh on the figures. Faster, payroll-based data from the ONS suggests only a slight hit back then, given the lockdown didn't start formally until late into the month. Either way it's a bit academic – we know since then that over two million people have applied for unemployment benefits, while around a quarter of UK employees have been. The growing concern now is that many of the jobs currently being supported via the government's retention scheme may at some point become redundant as firms begin to adjust to the current, socially distanced operating environment.

We'll also get retail sales data for April, which could show at least a 15% decline in spending. While online will have received a boost during lockdown, physical retail still typically makes up the lion's share of purchases. With shops unlikely to fully reopen until June, and consumers clearly reluctant to return to the high street given the virus risk, the outlook for retailers remains bleak.

Separately, UK inflation will plunge on the back of falling oil prices, but also a decline in regulated water costs. Expect headline CPI to head towards zero in the next couple of months.

Asia week ahead: China's Twin Sessions dominate

A couple of central bank policy meetings and GDP releases will make the financial headlines next week. But China's annual National People's...

Source: Shutterstock

➔ China's Twin Sessions

China's annual rite of spring, which was delayed by more than two months due to the Covid-19 outbreak, will finally take place next week. The first of the two annual meetings, the Chinese People's Political Consultative Conference (CPPCC), starts on Thursday, 21 May. The second meeting, the National People's Congress (NPC), begins a day after with Premier Li Keqiang's work report.

Premier Li's report typically lays out economic targets for 2020 and the policy framework to

achieve those. This year it's going to be a challenging task given an unprecedented economic crisis brought on by Covid-19. The economy has suffered its worst-ever contraction in 1Q20 by 6.8% over a year ago. Although the worst of the country's outbreak is over (hopefully), a significant global demand slump will continue to undermine the recovery in the rest of the year. Adding to the woes is a growing spat with the US, carrying with it the risk of a re-escalation in the trade war between two countries.

Against such a backdrop, it looks like the government might take in stride whatever comes its way rather than hard and fast economic targeting. Obviously, it will spare no effort in keeping the economy afloat with increasingly stimulatory policies. Just ahead of the Twin Sessions the People's Bank of China (PBOC) will decide on the next move in its Loan Prime Rates for 1 and 5-year tenors. In the 1Q monetary policy report, [the PBOC has signalled aggressive monetary stimulus](#). Our Greater China Economist, Iris Pang, expect a 20 basis point LPR cut next week.

[China signals more aggressive monetary stimulus](#)

[China: Challenges shift from supply chain to global demand](#)

➔ Further central bank easing

The central banks in Indonesia and Thailand will be busy deciding on monetary policy. With growth taking a beating from the global pandemic, and inflation grinding lower, further policy rate cuts are on the table.

Besides growth and inflation, a key policy consideration for Bank Indonesia is currency stability. The Indonesia rupiah (IDR) has been appreciating since April and has clawed back nearly half the losses it incurred against the US dollar in the first quarter of the year. We believe this should provide BI with some space for another 25bp rate cut next week. Moreover, BI's 50bp rate cut in 1Q came despite the weak currency, suggesting that growth has taken greater prominence in policymaking. If so, the 3% GDP growth rate in 1Q, a nearly two decade low, makes an additional 25bp rate cut a done deal next week.

Thailand will put out its 1Q GDP report on Monday, 18 May, significant data for the Bank of Thailand's monetary policy decision two days later (20 May). We anticipate a sharp negative swing in GDP, to -5.1% YoY from +1.6% in 4Q19. That would make a strong argument for easing by an otherwise hawkish central bank. We have pencilled in a 25bp cut in the BoT policy rate to 0.50%. However, considering the extent of the slump we wouldn't rule out a 50bp cut, while the [steepest price fall in over a decade](#) also allows for a big cut.

[Thailand: Steepest price fall since the financial crisis reflects huge drop in demand](#)

➔ Some more 1Q GDP reports

Among other economic releases, Japan is due to release a provisional estimate of 1Q GDP on Monday, 18 May, while Singapore might put out a revised one sometime during the week. Given only partial, less stringent Covid-19 movement restrictions in both countries, the GDP loss is likely to be relatively small. We expect a 1.6% YoY fall in Japan. The advance estimate puts Singapore GDP growth in 1Q at -2.2% YoY. However, surprisingly strong manufacturing in March suggests an upward revision is more likely than not. We estimate a revision to -0.8%.

The full impact of the pandemic on these economies will only be realised in the current quarter. Their trade figures for April should provide some glimpse into that.

Asia: Lockdowns work, they also hurt

Source: Shutterstock

Poland

In Poland, we expect April retail sales to contract by nearly 20% YoY. This should be the worst reading, as lockdown restrictions have been gradually loosened in May.

We expect a smaller contraction in manufacturing activity in April compared to the eurozone. However, widespread Covid infections in the mining industry may affect industrial activity and weigh on GDP also in the coming months.

Labour market data should provide evidence of the limited contraction in employment in April. We expect the unemployment rate to increase more significantly from May onwards.

Turkey

We expect the Central Bank of Turkey to continue to reduce the policy rate (1-week repo rate) by 75 basis points to 8%, as evidenced by revisions to the inflation forecast, which provide room for more easing, as well as the recent strength in the Turkish lira following decisions by the banking regulator.
