## ✓ US: Tracking trade

Trade news will be the main focus next week. Recent comments have suggested the US and China may be inching closer to a deal that can prevent (or at least delay) additional tariffs on \$200 billion of imports from China. President Trump has signalled a desire to do a deal and has proposed a summit in March, but this will require China making concessions on intellectual property and technology sharing in addition to simply buying more American products.

However, there is a clear concern in Europe that President Trump could be pivoting his attention towards them. We are awaiting the Department for Commerce's Section 232 decision on whether importing cars is a national security issue (by harming the US auto industry). If so this could lead to additional tariffs on car imports, which would clearly hurt European automakers.

Such a development would likely be taken negatively by markets as it would risk a direct response of tariffs from the EU and a step up in tensions. Businesses and consumers will face higher prices in such a scenario along with the likely disruption to supply chains - and all of this could see a repeat of the steep equity market falls which were seen in late 2018.

## Eurozone: Floating with the r-word

The Eurozone PMI will be among the most closely watched figures next week. The r-word has been used out loud already as the January PMI dropped to just 51 (anything below 50 signals contracting activity). The February PMI will give a sense of if we're going to see a turnaround in growth figures, or whether we will move even closer to stagnation halfway through the first quarter.

Over in Germany, the narrative is that confidence indicators should bring the first tentative signs of a bottoming out after the recent stretch of disappointing macro data.

## Developed Markets Economic Calendar

# Asia week ahead: Singapore unveils budget for FY19

The outcome of the ongoing US-China trade negotiations will set the tone for Asian markets next week. Singapore's proactive macro policies give...

Source: Shutterstock

## ➔ Singapore: Embarrassment of riches

Next week in Asia kicks off with Singapore's trade data for January on Monday, followed by the budget statement by the country's finance minister later that day. An outsized slump in non-oil domestic exports (NODX) in December suggests some retracement of that is in order while the likely front-loading of shipments ahead of the Lunar New Year holiday should have helped the bounce. However, with semiconductors remaining a weak spot – taking a cue from the large fall in Korea's chip exports in January – our baseline remains a persistent weak NODX trend.

Undoubtedly, the FY19 budget will focus on supporting the economy from the adverse impact of the widely-anticipated slowdown in global demand this year. The public finances have surpassed the government's expectations in recent years. With decent 3.3% GDP growth and better revenue performance so far, the budget is likely to produce a surplus contrary to the initial forecast of a fiscal deficit in 2018, and this leaves scope for more growth supportive fiscal policy in 2019.

Among the popular budget measures in 2019, there are more incentives for the workforce to improve their skill set, more help for low-income households, increase in provision for healthcare for the elderly, possibly a sugar tax, and greater support for small-and-medium enterprises towards digital transformation.

## Singapore: Wide fiscal surplus allows for growth-friendly budget

## ➔ Indonesia: Central bank to leave policy on hold

Indonesia's central bank meets next Thursday (21 February), and we expect no change to the policy rate of 6.0%. A total of 175 basis points rate hikes over June-November 2018 was aimed at curbing the depreciation pressure on the rupiah. Although the Indonesian rupiah has been an Asian outperformer so far in 2019, the depreciation risk from widening current account deficit prevails and could be further intensified by political uncertainty surrounding the elections in April.

The year-to-date rupiah performance combined with well-behaved inflation has raised hopes of policy rate cuts. However, the deputy governor Dody Waluyo recently thrashed such hopes, noting still 'cautious' policy preference to financial stability over growth. We aren't ruling out further rate hikes this year. But for now, we think BI policy will take a backstage until the political uncertainty is lifted.

## ➔ Thailand: 4Q18 report card arrives

Thailand's GDP data for the final quarter of 2018 is due on Monday. Underlying our view of a pick-up in growth to 3.5% year-on-year from 3.3% in 3Q18 is improved manufacturing growth even as exports continued to weaken. It's still not an exceptional starting point for the government looking for 4% GDP growth in 2019.

Besides global factors depressing exports, political uncertainty is likely to overshadow the economy this year. We expect annual GDP growth to slide to 3.8% in 2019 from an estimated 4.1% in 2018.

We don't think this will be a sufficient reason for the Bank of Thailand to reverse December's 25bp rate hike, while persistently large current account surplus supports the baht's outperformance.

## Asia Economic Calendar

Country	Time*	Data/event	ING	Survey	Prev.

# Key events in EMEA and Latam next week

Next week should be relatively subdued on the data front but positive news is expected from Poland. Rebounding retail sales and industrial production, as...

Source: Shutterstock

## ✓ Poland: Solid activity in January

Industrial production should recover from 2.8% in December to 5.5% year-on-year in January; the disappointment in December was largely related to the construction sector, which plays a minor role in both January and February. Exports maintained a decent performance. Retail sales should also rebound from 4.7% to 8.0% YoY; the December reading was dragged down by clothing (due to weather effects) and food sales. Both categories should recover in January while demand for durable goods should remain solid.

Labour market data should also paint a positive picture. We expect an increase in wages from 6.1% to 7.3% YoY; the December reading was reduced due to a smaller contribution from the mining sector. Also, the minimal wage hike in January should add approximately 0.4 percentage points to the headline figure. Enterprise employment is likely to be lower when compared to previous years but a rapid drop reflects a statistical anomaly rather than a structural change. Each year the statistical office rebalances the panel of enterprises adding new companies to the sample. In 2018, such a procedure resulted in an abnormal increase in employment, which likely won't repeat this year.
