Asia week ahead: Key central bank moves and inflation reports

The coming week features key central bank decisions from the Bank of Korea and Bank Indonesia, plus inflation data from Japan and Singapore

By Min Joo Kang

Key events in developed markets and EMEA next week

The key event next week is the Jackson Hole policy symposium, which should give a clearer view of the Fed's rate hike decisions. We expect 2Q GDP to revise upwards to -0.8%, with modest increases in consumer spending and retail sales. In the eurozone, August PMIs and consumer confidence data should indicate a further contraction in economic activity

Source: Shutterstock

US: Second-quarter GDP expected to be revised modestly higher to -0.8%

The market remains split as to whether the Federal Reserve will hike rates by 50bp or 75bp on 21 September, but things may become clearer after the annual Jackson Hole policy symposium begins next Thursday which will see Fed officials and other global central bankers, finance ministers and academics converge in Wyoming. Fed chair Jerome Powell will give the keynote speech. However, even after this event it is all to play for with the August jobs report to be published on 2 September and the August inflation report on 13 September. We currently favour 50bp moves in September and November with a final 25bp hike in December, but should payrolls rise strongly yet again (350k+) and inflation move upwards, then we would likely switch to a 75bp hike on 21 September.

The data calendar includes revisions to 2Q GDP, which was initially reported as -0.9%. We suspect

that consumer spending could be revised modestly higher following the revisions in the retail sales report so are tentatively suggesting -0.8%. We will also get July consumer spending numbers, which should be OK with lower gasoline prices boosting household spending power, supporting consumption elsewhere. Durable goods should also hold up, buoyed by robust Boeing aircraft order numbers.

✓ Eurozone: The PMIs are expected to deteriorate further in August

Next week Tuesday will give a sense of where the eurozone economy is headed in August as both PMI and consumer confidence data will be out. The PMIs will be especially closely watched as the composite PMI dipped below 50 in July, indicating a contraction in economic activity. We expect a further deterioration for August as businesses and consumers struggle with even higher energy prices, and drought is adding to production problems in Germany. This will also impact consumer confidence, which had already dropped to an all-time low in July. Don't rule out another new record for August.

Asia week ahead: Key central bank moves and inflation reports

The coming week features key central bank decisions from the Bank of Korea and Bank Indonesia, plus inflation data from Japan and Singapore

(Central bank) decisions decisions decisions...

Next week's Asia calendar features key central bank decisions. We expect the Bank of Korea (BoK) to raise rates by 25bp on 25 August. On the same day, the BoK will release its latest economic outlook. The 2022 GDP outlook could be downgraded slightly to 2.6% from the current 2.7%, while the CPI inflation outlook should rise sharply to 5.3% from 4.5%. Surveys for consumers and businesses are also likely to worsen as the recent nationwide floods will likely take a toll on sentiment.

Bank Indonesia (BI) is also meeting next Thursday and we could see BI Governor Perry Warjiyo whipping out a surprise 25bp rate increase after staying on hold for all of 2022. BI has held firm despite tightening from regional players, indicating that inflation has stayed "manageable". Recently, however, plans to decrease the energy subsidy, floated by President Joko Widodo, suggest that the price of subsidised fuel could increase in the near term. A jump in fuel

prices could be enough to nudge core inflation past the target and this could be reason enough for BI to hike rates as early as next week.

Meanwhile, we expect banks in China to cut the Loan Prime Rate for 1Y to 3.6% from 3.7%, and 5Y to 4.3% from 4.45%. The market consensus points to banks cutting both the 1Y and 5Y by only 10bp, however. Our more aggressive projection of the 5Y rate cut comes from the government's request to support economic growth and a larger 5Y cut should help existing mortgagors lower their interest cost burden.

Inflation from Tokyo and Singapore

Inflation reports are also the highlight for next week and Tokyo CPI inflation is expected to stabilise with lower global oil prices and a weaker yen.

For Singapore, both headline and core inflation are expected to heat up further. This should keep the Monetary Authority of Singapore (MAS) on notice for additional tightening with a move likely at the October meeting. Headline inflation could heat up to roughly 7% while core inflation could pick up further to 4.5%.

Other key reports out next week: Key Taiwan data and Japan's PMI

Other key data reports in the coming week are from Taiwan, which releases export orders, industrial production, and unemployment figures in the coming days. We expect that global demand for semiconductors will slide and therefore put downward pressure on export orders and industrial production. As such, we also expect that the unemployment rate could edge up as economic activity slows. Lastly, we round the week off with Japan's preliminary manufacturing PMI data, which is likely to drop below 50 on concerns about slowing growth from developed markets and China.

Asia Economic Calendar

Country	Time	Data/event	ING	Survey	Prev.
Monday 22 August
