US: Containment measures increasingly likely to damage consumer spending

With Covid cases on the rise across the US, we are seeing more states announce new containment measures. In the likes of Michigan, Wisconsin and California we have seen dine-in restaurants/bars, gyms and places of worship forced to close while other states have introduced curfews/stay at home orders. These measures are likely to spread to other states, but may not be enough to limit the latest wave of the virus if evidence from Europe is anything to go by. Rising hospitalisation rates after next week's Thanksgiving holiday, historically a time for family gatherings, could hasten more aggressive measures, which would be more economically damaging.

Next week's data includes both the Conference Board and University of Michigan consumer confidence measures and it will be interesting to see if Covid is prompting concern amongst households or whether new equity market highs and positive vaccine developments can offset that. The election outcome could also play its part, particularly regionally. 3Q GDP is unlikely to be meaningfully revised from the record 33.1% annualised rate, but there is perhaps some downside risk for the October consumer spending number given the recent retail sales figures. A softer start

to the fourth quarter coupled with new Covid containment measures would be consistent with our sub-consensus 1.6% annualised 4Q GDP forecast.

Eurozone: PMI data to reflect the significant downsides of lockdown 2

Eurozone sentiment data out next week promises to be dismal as the new lockdown measures will be fully captured in these figures. While last month showed a small tick down for most indicators, this one will be a significant decrease. This will be largely due to the service sector, which is where all restrictive measures have been introduced so far, but do expect some second round effects to impact the manufacturing sector.

Developed Markets Economic Calendar

Key events in EMEA and Latam next week

A relatively quiet week ahead in the EMEA and Latam region, but keep an eye on unemployment figures from Hungary and Poland, as well as GDP figures out of Mexico

Source: Shutterstock

✓ Poland: Solid retail sales may not be enough to curtail the 4Q slowdown

We expect solid retail sales growth in October, despite a mounting number of Covid-19 cases in Poland. Data on transaction activity indicates that Poles are reluctant to stop spending and even stepped up purchases ahead of the expected lockdown in November. Still, with new restrictions in place this month the economy should significantly slow in 4Q, as a more pronounced recovery is delayed past 1Q21.

✓ Hungary: Unemployment to rise

We see a chance for the unemployment rate to start rising again in Hungary as the impact of labour market programmes fades and companies face severe adversity amidst a second wave of Covid-19.

EMEA/Latam Economic Calendar

Country	Time	Data/event	ING	Survey	Prev.
Monday 23 November					
Poland	0900	Oct Retail Sales (YoY%)	1.5	-0.3	2.7

Asia week ahead: Gauging India's bounce back

The focus next week in Asia will be the extent of India's bounce back in the third quarter, as the data in October underscores the renewed threat to the region from the second wave of the pandemic

Source: Shutterstock

➔ India – 3Q report card arrives

In Asia, India has been the worst-affected country by Covid-19 and the national lockdown in the second quarter dented GDP by -25% quarter-on-quarter and -24% year-on-year. The subsequent reopening of the economy resulted in some recovery, as observed elsewhere in the region.

On average other Asian economies clawed back almost two-thirds of their Covid-induced GDP fall suffered during the first two quarters of the year in the third quarter. On the same scale, India should see about 16% QoQ GDP surge in 3Q, though that still corresponds to about -12.0%

YoY fall. This aligns with high-frequency data, especially the monthly industrial production showing a sharp narrowing of the year-on-year contraction, from -36% in 2Q to -6% in 3Q. Industrial production growth closely tracks real GDP growth.

Even so, the depth of the 2Q slump also suggests that bounce back might not be as vigorous as in other less affected regional economies, as India continued to be an epicentre of the pandemic with close to 9 million infections at the time of writing. This imparts downside risk to our 3Q GDP view.

➔ Rest of Asia – October data dominates

Taiwan and Singapore will report revised GDP figures for 3Q. We anticipate a moderate contraction in Singapore's growth numbers to -5.4% YoY than -7.0% initial estimate, resulting from strong September manufacturing growth. Taiwan's GDP growth is unlikely to differ much from the 3.3% first reading, leaving it among the few Asian countries (China and Vietnam) with positive GDP growth in the last quarter.

Undoubtedly, the second wave of the pandemic threatens the recovery of Asian economies in the current quarter. A slew of October trade and manufacturing releases from Taiwan, Singapore and Thailand should underscore the downside growth risk. The consumer and business confidence indicators from Korea will be under scrutiny for the same reason, as the Bank of Korea looks poised to leave the policy on hold. The BoK meets next Thursday, 26 November.

China's industrial profits data for October should shed light on the investment recovery coming into the final quarter of the year. The question is whether the double-digit profits growth was sustained for another month after the sharp slowdown in September to 10% YoY from 19% in the preceding two months.
