✓ US: fiscal support talks, FED likely to stay on hold and 4Q GDP

Joe Biden will be keen to build momentum behind his \$1.9tn fiscal support package for the US economy, but given many in the Republican party have re-discovered fiscal conservatism it may not be straightforward. Democrats will need to work with moderate Republicans to get past the Senate filibuster that require 60 Senators putting the proposals to a vote. This is obviously possible, but if it isn't, there is a work-around via the budget reconciliation process. This allow a simple majority to adopt certain bills addressing entitlement spending and revenue provisions, thereby prohibiting a filibuster. However, it is not available for all of the package, including the money for local and state governments. This implies some compromises will end up being made.

We also have a Federal Reserve policy meeting, but no changes are expected. The recent pick-up in market inflation expectations and bond yields is likely going to have to be addressed in the Q&A session that follows. We suspect the Fed will retain the line that there are still economic risks and significant spare capacity in the economy that will help to keep inflation contained while they are likely to dismiss talk of a near-term tapering of their \$80bn of Treasury purchases and \$40bn of MBS purchases every month for similar reasons.

Data-wise the highlight will be 4Q GDP growth. Expectations have been lowered marginally on the back of weaker consumer spending numbers and falling employment in December, but we should

still expect a 4%+ growth figure. We are more worried about Q1 given the loss of economic momentum following the latest Covid spikes and the reintroduction of containment measures in many areas. Nonetheless, with vaccinations getting underway and household savings levels at record highs there are clear reasons for optimism regarding 2Q21.

UK jobs numbers to show impact of original furlough deadline

The UK's furlough scheme was originally due to expire last October, to be replaced by a condition that staff were brought back on a part-time basis to be able to continue receiving some state wage subsidies. While that ultimately didn't happen – and the original scheme was extended until this April – redundancies increased ahead of that original deadline as firms hard-hit by the pandemic prepared to reduce headcount.

Next week's job figures will give us a more complete picture of how this increased unemployment. There's some evidence firms began taking action weeks before the changes – redundancies peaked in September, and weekly data shows the jobless rate had correspondingly climbed by around 1 percentage-point to 5.5% in late October. It is likely this will have pushed towards 6% in November (though remember the headline figure we get is a three month average).

Will it rise further in 2021? Quite possibly, though a lot depends on how/when the furlough scheme is unwound. If this happens before the hardest hit sectors are reopened, then we could see the unemployment rate rise towards 7-8%

Key events in EMEA and Latam next week

The key focus next week will be a policy decision from Hungary, where the central bank seems to be in wait-and-see mode. Also, keep an eye on some labour market data from Poland, Russia and Hungary

Source: Shutterstock

✓ Hungary: NBH continues to wait and see

In Hungary, the highlight of the week will be the National Bank of Hungary's rate setting meeting. We expect the central bank to remain conservative, maintaining its wait-and-see approach, especially considering its elevated inflation forecast for 2021. In all, this meeting should be a non-event when it comes to monetary policy action and forward guidance. Data wise, the labour market figures could shed some light on the knock-on effects of the second wave of Covid-19. We expect the December unemployment rate to jump, but this will hardly impact the three-month average. Due to an expected cut in one-off premiums and bonuses at year-end, we see average wage growth slowing significantly, retreating to a pace last seen around 2016.

Asia week ahead: Fourth-quarter growth numbers dominate the calendar

Moderating GDP contraction in the final quarter of 2020 remains the baseline for most Asian economies. But having said that, markets may shrug off the data and instead focus on what's shaping the region's economic outlook in 2021

Source: Shutterstock

➔ What to expect from 4Q GDP?

Hong Kong SAR, Korea, Taiwan and the Philippines will release their GDP performance in the final quarter of 2020.

Like China, Taiwan continued to buck the region-wide negative GDP trend in the last quarter of 2020. Not only staying in the positive territory, but growth also gained further traction to our

house forecast of 4.2% year-on-year in 4Q from 3.9% in 3Q. Accelerating exports are driving the growth - a trend hinging on how the global semiconductor cycle pans out this year. As of now, it seems to be in full swing, given the strong electronics exports in December.

Moderating GDP contraction remains the baseline for other Asian countries too with the Philippines continuing to be the region's underperformer

The electronics-led export argument holds good for Korea too, though it may not turn the corner into positive territory as the rapid spread of the virus depressed consumer and business confidence and brought a decade-high unemployment rate of 4.6%.

The low base year effect seems to be the only hope of a little less negative growth in Hong Kong. That said, our house view of steep GDP contraction in 4Q, by -5.0% YoY than -3.5% in 3Q, is probably a reflection of this economy losing its lustre as the world's gateway to China.

Moderating GDP contraction remains the baseline for other Asian countries too with the Philippines continuing to be the region's underperformer with another quarter of double-digit GDP contraction (ING forecast -10.4% YoY in 4Q vs. -11.5% in 3Q). This is because the pandemic weighed down domestic demand and exports failed to catch up despite its high electronics content.

➔ What else to look out for?

Lots of December industrial production releases will help refine GDP estimates for the last quarter, though Korean and Taiwanese data would be of little use as we also get their GDP figures. However, forward-looking indicators like consumer and business sentiment indices from Korea should be of some interest.

We don't see CPI inflation figures from either Singapore or Australia causing any ripples in the markets either

That leaves us looking out for December industrial production from Japan and Thailand where sluggish export recovery sustained the negative spell on manufacturing growth. Singapore also reports industrial production data, which will indicate likely direction of revision to the -3.8% YoY advance 4Q GDP estimate released earlier this month. Also, look out for Singapore's jobs report for the fourth-quarter, which should show an unchanged unemployment rate at 3.6%.

Lastly, we don't see CPI inflation figures from either Singapore or Australia causing any ripples in the markets. Prices continue to be under pressure from weak consumer spending, which together with sluggish growth prospects argue for sustained policy accommodation ahead.
