Key events in developed markets and EMEA next week

The Fed's favoured measure of inflation and the National Bank of Hungary's upcoming meeting are in focus next week

US: Potential for a second consecutive real consumer spending number

Having started to waver on the back of hotter-than-expected inflation prints, the March FOMC meeting and a relatively dovish assessment from Federal Reserve Chair Jerome Powell have reinvigorated the market's belief that the Fed will deliver meaningful interest rate cuts this year, most likely starting at the June FOMC meeting. We will no doubt hear more from individual FOMC members on how they see the risks surrounding the central case view from the Fed of three 25bp rate cuts this year and three in 2025.

In terms of data, the main focus will be on the personal spending and income report. This also includes the Fed's favoured measure of inflation, which is the core personal consumer expenditure deflator. In January, it rose 0.4% month-on-month, more than double the 0.17% MoM rate we need to consistently hit to bring the annual rate back to 2% over time. Given the CPI and PPI numbers that have already been released, the consensus is firmly backing a 0.3% outcome, which – while not ideal – is progress. Given that this is published on Good Friday when many offices will be closed, thin market conditions could mean outsized market moves on any data surprise. There is also potential for the report to signal the second consecutive negative MoM reading for real consumer spending.

Other numbers include new home sales and durable goods orders. Mortgage rates dropped in early February, and this has already lifted existing home sales. We expect new home sales to repeat this story. However, mortgage application numbers have subsequently dropped back, and actual transactions will do the same in March. Meanwhile, Boeing aircraft orders remain weak and will be something of a drag on overall durable goods orders growth.

✔ Hungary: 75bp cut and hawkish guidance expected

The highlight in Hungary next week is the National Bank of Hungary's rate-setting meeting. February was a good opportunity for the NBH to accelerate easing, but we can't say the same this time. Developments since the last meeting have been mixed and could again, in our view, justify a more cautious approach. We expect the central bank to deliver a 75bp cut, accompanied by some hawkish guidance on monetary policy strategy in the second quarter of 2024. The current account balance will deteriorate in the fourth quarter based on monthly statistics, possibly turning into a small deficit due to the slump in goods exports in December. The latest set of labour market data will be challenging to read. We expect strong wage growth to continue, with some deceleration due to base effects. On the other hand, we forecast employment data to deteriorate and the unemployment rate to rise, suggesting a further easing of labour market tightness.

Asia week ahead: Activity data from Japan and Korea in focus

Keep an eye out for activity data in Japan and Korea, trade figures from Hong Kong and inflation data in Singapore next week

Data deluge from Japan

Given the production interruption of car manufacturers in January and solid February exports, we expect industrial production to rebound strongly to offset the previous month's decline. Retail sales also are expected to improve further, along with an increase in inbound foreign tourists during the Lunar New Year holiday. Labour market conditions are likely remain tight, with the jobless rate staying at 2.4%.

Lastly, Tokyo CPI inflation will be key to watch. The government's energy support programme has been a key reason for the monthly swing in inflation data, and we expect Tokyo CPI to moderate to 2.4% year-on-year from the previous month's 2.6%.

Australia inflation could inch higher

Australian CPI inflation for February may push slightly higher after remaining at 3.4% YoY in December. The February 2023 index rose only 0.2% month-on-month, making this month difficult

to undershoot and bring inflation lower, unless we see a continuation of January's price declines. We think it's more likely that there is a slight correction upwards. We forecast inflation to come in at 3.5% YoY, following a 0.3% MoM increase.

A busy week ahead for Korea

Survey data in Korea is expected to show few changes. Consumer sentiment is expected to retreat as equity and housing markets weakened during the month, but is still likely to remain above the 100 level. The manufacturing business survey (BSI) should improve on the back of a strong performance for the IT sector. Non-manufacturing BSI is expected to slide, reflecting weakness in consumer spending and the construction sector.

Meanwhile, monthly industrial production data is expected to contract in February. Chip production should see some gains, but auto exports and early auto sales data are signalling a contraction in production. Retail sales are expected to rebound with inflows of foreign tourists during the Lunar New Year holiday, along with various sales promotions.

China industrial profits to sustain recovery

A quiet week ahead for China sees industrial profits data as the only indicator of note to be released. After a stronger-than-expected start to the year for industrial production, we expect industrial profits to continue to recover. After remaining in negative growth since July 2022, markets will watch to see if we finally witness a return to positive growth in early 2024.

Taiwan industrial production to slow on seasonal factors

Industrial production data will be published next Monday, and we expect seasonal effects to cause a sharp deceleration on both a monthly and yearly basis. With headline growth numbers likely to be skewed, it may be more valuable to gauge if there are any changes to sector level trends. Recent data showed a recovery trend in electrical equipment, auto, and mining sectors.

Hong Kong trade numbers to be impacted by the Lunar New Year effect

February trade data will be released next week, where the Lunar New Year effect is expected to cause a significant slowdown in the YoY growth numbers from January. However, trade growth is expected to have recovered slightly year to date in the first two months of 2024. Hong Kong will also publish its money supply growth data, where markets will look to see if it can snap a three-month streak of declines.

Singapore inflation to show core inflation still elevated

Singapore reports February inflation next week. We expect headline inflation to inch down to 2.8% YoY from 2.9% YoY previously, which would mark a 0.5% increase from the previous month. Meanwhile core inflation, which is the measure more closely watched by the Monetary Authority of Singapore (MAS), should stay elevated at 3.2% YoY. This will likely keep the MAS on guard for at least the first half of the year.

Key events in Asia next week

Country	Time (GMT+8)	Data/event	ING Survey	Prev.
Monday 25 March
