Key events in developed markets next week

German's Ifo survey should provide some insight into whether the dismal third quarter was an aberration or something more deep-rooted. And it might be...

Source: Shutterstock

✓ Eurozone: Fall in oil prices will be a drag on inflation

Inflation data will be a key highlight in the eurozone next week. Now above the central bank target at 2.2%, the drop in oil prices will no doubt have an effect, although this has not worked through to prices at the pump one-for-one.

✓ German Ifo to shed light on whether economy will regain momentum

The prominent Ifo index of business sentiment should shed some light on whether the German economy is likely to regain momentum in the final quarter of the year or whether a disappointing third-quarter performance was more than just a soft patch.

At the same time, headline inflation should drop somewhat but not as much as the latest drop in crude oil prices might suggest. The dry summer weather and low water levels in many rivers have led to transportation bottlenecks, pushing up gasoline prices. The price difference between crude oil prices and gasoline prices has widened significantly.

✓ Riksbank December hike on tenterhooks

After a strong first half of the year, we expect a very weak 3Q GDP report from Sweden on Thursday. We expect only 0.2% quarter-on-quarter growth, and the risks to that are mainly to the downside.

Some of this weakness is temporary – a new tax on cars came into force in July, which caused significant front-loading of car sales (boosting 2Q GDP at the expense of a weaker 3Q). But near-term indicators point to a broader slowdown over the autumn, with the rapid contraction of new construction, in particular, likely to weigh on growth. In that context, the November Economic Sentiment Indicator (on Wednesday) will also be an important data release, as it speaks to the current momentum in the economy. If both the 3Q figure and the November ESI disappoint this would reduce the chance of a Riksbank hike in December.

✓ Canada: Slowing housing market will prevent any 'super growth' story

There was good news for Canadian growth in September. The trade deficit was squeezed further, manufacturing sales saw an uptick on the month and we expect the same for retail trade. All of which contribute to our forecast of 0.3% growth month-on-month.

We also expect healthy growth for the third quarter overall though it won't be as strong as the 2.9% posted in 2Q – we're looking for 2.2%. Dips in construction starts typically precede an economic slowdown, and that's exactly what we've got here (for clarity, construction starts fell 23% QoQ). But it's not as if this was unexpected. The housing market is in a difficult situation. Factors such as excess supply (linked to affordability issues), higher borrowing costs and tighter mortgage rules are holding back residential investment, and we see this lower trajectory sticking around for a while.

Asia week ahead: Increasing headwinds to growth

Manufacturing releases crowd the Asian economic calendar, but India's 3Q18 GDP and the central bank of Korea's monetary policy meeting are the...

Source: Shutterstock

➔ Asia: Some sense of 4Q18 GDP growth

China's manufacturing PMI for November coupled with hard manufacturing data from Japan, Korea, Singapore, and Thailand for October will give a sense of where GDP growth of these countries is headed in the final quarter of the year.

We don't see China's manufacturing PMI drifting far off the threshold level of 50; where it has hovered around since September. Even though export growth has held up since the onset of the trade war, export orders have been contracting at an increasing pace. This has dragged industrial

production growth below 6% in the last two months, supporting our view of GDP growth slipping below 6.5% in the final quarter.

Electronics matter more for the rest of the Asia reporting manufacturing data and judging by the ongoing sell-off in electronic stocks; things don't appear to be looking great. Electronic exports from Korea are still growing on an annual basis, but those from Japan, Singapore, and Thailand have either been flat or contracting. Not only electronics, but weak automobile demand has been an added drag on manufacturing in Japan and Thailand.

As such, GDP growth across Asia is poised for a sustained slowdown in the fourth quarter.

Electronics and automobile exports seem to be declining

Source: CEIC, ING

Aggregate electronics exports from Japan, Korea, Taiwan, Singapore, Malaysia and Thailand; automobile exports from Japan, Korea and Thailand.

➔ Korea central bank policy hangs in balance

Bank of Korea will announce its policy decision on 30 November and the rhetoric has been swinging between a rate hike and staying on hold.

Contrary to the message from a chunky 22% annual export growth in October, there is little room for growth optimism. Manufacturing continues to be weak, the inventory-to-shipment ratio remains elevated, and the risk of a downturn in the global electronic cycle is lingering. Supply disruptions due to nationwide factory workers' strike against labour policies is another thing.

The last central bank rate hike by 25 basis point to 1.50% was in November 2017. Even if the central bank is under pressure from the government to resume tightening to rein in rising house prices and household debt, the newly appointed finance minister Hong Nam-ki admits the next year will be "considerably difficult" for the economy. And the central bank governor Lee Ju-yeol has resisted calls of a rate hike to cap house price, despite the downward pressure on the economy.

We continue to see the BoK leaving the policy on hold until the third quarter of 2019, and even this may get pushed back if things worsen further.

1.5%

ING forecast of BoK policy rate

No change until 3Q19

➔ India: The GDP peak cycle is behind us

Our view of a slowdown in India's GDP growth to 7.5% YoY in the July-September cycle from 8.2% in the previous quarter, which was the fastest rate of growth in two years, is consistent with the median consensus estimate in the latest Bloomberg survey. GDP data is due on Friday, 30 November.

After a sharp slump from late 2016, demonetisation growth started to pick in 2Q18 and gathered significant momentum over the next two quarters. While this high base effect is at work to depress the annual increase, weaker exports and private consumption, and increasing drag from net trade support expectations of GDP slowdown.

GDP slowdown and stable inflation under 4% will give more reasons to the central bank to leave the monetary policy on hold, as this is what we now forecast for the December policy meeting.

7.5%

India's 2Q FY19 GDP growth

Bloomberg consensus median

Key events in EMEA and Latam next week

A credit rating decision on Bulgaria and insights into Poland's strong surplus will be the key highlights next week

Source: Shutterstock

✓ Bulgaria: Rating upgrade?

After raising its outlook from stable to positive in June 2018, S&P could move to upgrade Bulgaria's sovereign credit rating further, this time into investment grade territory at 'BBB', thus aligning itself with Moody's and Fitch.

While our main scenario is still for an unchanged rating, an upgrade is possible given that some of the reasons cited for a potential upgrade in June seem to be in place- namely improved domestic financial conditions, strengthened fiscal and external buffers and declining non-performing loans. Still others - namely the balance of payments or imminent admission to the European Exchange Rate Mechanism II, are less supportive. The process to join the European Banking Union and participate in the ERM II are important milestones and help to temper worries about the domestic financial system.

✓ Weak 3Q growth figures won't stop Czech National Bank from tightening

Flash 3Q GDP growth ended below both the market's and the Czech National Bank's (CNB) forecast (2.3% year-on-year vs. 2.7%). A revised estimate released next week should confirm that household consumption remains the main driver of growth, with the weaker-than-expected

figure driven mainly by volatile investments and inventories. The data should be no game changer for the CNB, which should continue to tighten monetary policy gradually. This will be delivered via higher rates, as the Czech koruna will most likely appreciate more slowly than the CNB's forecast assumes.

Poland: An insight into the strong surplus

According to the Ministry of Finance's Teresa Czerewińska, the central budget achieved a strong surplus of PLN 6 billion at the end of October. Next week's budget data should provide greater detail about the reason for this surplus, i.e. additional revenues or lower expenses.

A final GDP reading is likely to confirm 5.1% year-on-year growth with a strong contribution from both private consumption and investments. The contribution from net exports is expected to be close to the neutral level of zero percentage points.
