Key events in developed markets next week

Will the new Fed Chair, Jerome Powell, lead the Fed to increase its interest rate hike forecast for this year?

US: how will Powell's tone determine the number of Fed hikes this year?

The key event next week will be new Fed Chair, Jerome Powell, testifying to the House Financial Services Committee following the release of the semi-annual monetary policy report this Friday. The tone he strikes will be key to determining whether the Fed will hike rates at the March FOMC, which looks probable, and whether the Fed will increase its forecast for the number of hikes it expects to implement this year from three to four. The downside risks to inflation have certainly faded with wages showing some signs of life and CPI in January coming in above expectations. With core inflation likely to rise above 2% in coming months we think the Fed will choose to take a more aggressive course of action.

As for the data, manufacturing numbers will be in focus. Durable goods orders will be dragged lower due to the volatility in Boeing aircraft orders, but excluding transportation the order book for US manufacturers looks very strong. This should be reflected in another robust reading for the ISM manufacturing index. The one area of potential data disappointment may be consumer confidence with the potential for slightly softer readings due to recent equity market volatility and higher mortgage borrowing costs. However, both the Conference Board and the University of Michigan surveys will remain incredibly strong by historical standards given robust employment and rising wages.

Eurozone: insights into the inflation puzzle

For the Eurozone, next week will bring more insight into the inflation puzzle. The Eurozone PMI revealed somewhat softening price pressures in February, confirming that the pipeline pressures to inflation remain relatively mild. As energy price effects will likely subdue inflation further, not much is to be expected of the February HICP release. Meanwhile, the unemployment rate could have ticked lower again in January as the labour market continues to show more signs of tightening.

Germany: will the SPD join a grand coalition with Merkel's CDU?

Being the first inflation data for February in the entire Eurozone, German CPI data on Tuesday should trigger most market attention. With the latest drop in oil prices and the stronger euro, German headline inflation should have remained stable, at best. For the rest, Germany will be warming up to the results of the SPD members' vote on whether or not to join a grand coalition with Merkel's CDU. This result is due on Sunday, 4 March.

Sweden: expect a softening of growth

In Sweden, 4Q GDP figures are due on Wednesday. We expect a solid end to the year at 0.8% quarter-on-quarter. But indicators for 1Q18 so far suggest a softening in growth, which may be confirmed by further data this week: Economic Tendency Survey, Retail Sales, and Manufacturing PMIs will all be released.

Key events in EMEA and LATAM next week

What is in store for Hungarian monetary policy? What will S&P and Moody's say about Romania?

Hungary: will the National Bank of Hungary change its monetary policy?

We don't see the National Bank of Hungary altering its monetary policy, we think it will keep rates unchanged using its IRS tenders to provide the much-needed dovish impetus. In line with recent global movements, we expect the PMI and confidence indicators to slip, but to remain at a level that suggests further optimism.

Romania: a rating downgrade in sight?

We do not see any rating action by either S&P or Moody's on Romania. Still, the reports are likely to highlight the negatives. With no fiscal consolidation in sight, Romanian credit looks exposed to rating downgrades in case of potential adverse economic shocks.

Poland: focus on the pace of investment recovery

The second reading of 4Q17 GDP will present a detailed breakdown of growth. The market's attention should be focused on the pace of the investment recovery, where we expect solid 11.4% year-on-year growth. The CSO statistical bulletin (published this Friday) will provide guidance as to whether the expansion was driven by the public or private sector.

Asia Week Ahead: Weak won may comfort Korean central bank

We have scaled back our Bank of Korea policy forecast from two rate hikes this year to only one in the third quarter

Source: Shutterstock

South Korean data deluge

A Bloomberg headline this week that [“S. Korea's Household Debt Hits Record \\$1.3 Trillion in 2017”](#) punches monetary policy hawks ahead of the Bank of Korea (BoK) monetary policy meeting on Tuesday, February 27. The article cited an 8% rise in household debt in the last year led by surging mortgage debt. The pace of debt growth has slowed from 11.6% in 2016 but it's still too rapid for an economy growing at only 3%. The article also cited the risk of rising debt defaults as interest rates go up. High household debt has prominently appeared as a risk in BoK policy statements.

The BoK started raising policy interest rates in November 2017, in what now looks like it will be a very slow tightening cycle. The pressure on further tightening has ebbed since, thanks to a sharp slowdown in GDP growth in the final quarter of 2017 (to 3% from 3.8%) and inflation has also begun to drift well below the target rate. A slew of Korean activity data, including forward-looking consumer and business confidence indexes and hard data on exports and industrial production,

will inform on the current state of the economy. The recent global market rout could dent confidence indicators while the Lunar New Year holiday will distort real activity data.

Bank of Korea rate decision

Moreover, the recent market turbulence should have laid to rest the BoK's concern over the Korean won (KRW). The selloff once again exposed the KRW's "VIX currency" status, e.g. appreciating more than most other Asian currencies during 'risk-on' market sentiment and depreciating more than most during 'risk off'. While markets do not expect the BoK to change their policy at the forthcoming meeting, they will pore through the statement for signs of future policy moves. We have scaled back our BoK policy forecast for this year from two 25bp rate hikes to only one in the third quarter of the year.

Singapore PMI

Singapore's industrial production for January and manufacturing PMI for February will help show how GDP growth is shaping up in 2018. The 13% year-on-year growth in non-oil domestic exports (NODX) in January was an upside surprise but electronics shipments growth, the mainstay of Singapore's exports, remained in negative territory. We expect NODX growth to return to the mid-single digit range this year. The April central bank decision remains a very tough call, and we are still somewhat uncomfortable with our long-standing tightening forecast. But following the recent stimulative budget announcement, some very modest offsetting tightening by the Monetary Authority Of Singapore seems more probable than it did.

Hong Kong Budget

Hong Kong's Budget for 2018 is due on February 28. Just as in Singapore, a significant fiscal surplus leading to a payback to households will not come as a complete surprise. Innovation is the buzzword in both Hong Kong and Singapore with greater policy initiatives.

Indian GDP

India also reports GDP data for the October-December quarter. The majority of Asian economies posted a year-on-year growth slowdown in the last quarter of 2017, thanks mostly to a high base a year ago. India's growth, however, benefits from low base effects. Consistent also with the run of high-frequency data over the period, we anticipate a slight acceleration in growth to 6.5% YoY in the October-December quarter from 6.3% the previous quarter. But it will take a big upside growth surprise to put some lift in the Indian rupee, Asia's worst performer this month.
