✓ US: Fed to wait some more

Three rate cuts in 2019 and a trade deal appear to have underpinned markets, but the economic backdrop remains mixed. A stronger housing market is supporting residential investment, but capex in general remains subdued while consumer spending growth has moderated. This should be evident in this week's GDP report. Meanwhile, although US-China trade tensions have eased, this is yet to feed into US manufacturing, and the risk of an escalation in US-EU tensions remains. Throw non-threatening inflation in the pack and the Fed is likely to reiterate a message of stability in monetary policy for now. Looking further ahead, the risks appear skewed towards lower interest rates rather than higher given that a catalyst for a broader economic upturn remains elusive.

✓ Bank of England likely to opt against easing for now

It's a close call, but we think Bank of England policymakers will opt against cutting interest rates next week. Sentiment indicators have virtually all improved since the election result, with business optimism and new orders turning higher. Admittedly we aren't convinced this will last given the myriad of risks linked to trade talks this year, and that may see up to four MPC members vote for easing at this month's meeting. But we think most policymakers will remain comfortable with their previous 'wait-and-see' stance and we think the most likely outcome is an 'on hold' decision. [Read more here.](#)

Asia week ahead: It's going to be quiet

The spread of the coronavirus casts a shadow over the Lunar New Year celebrations due to start from Friday

Source: Shutterstock

➔ It's quiet... too quiet

The markets in China will be closed next week and some other regional markets won't open for the first couple of days of the week. The usual, month-end economic releases will be released in an otherwise quiet week, though they are likely to be overshadowed by holiday-related slack.

50.1

Consensus on China manufacturing PMI

➔ Still, something matters

The usual standout on the calendar around this time of the month is China's Purchasing Manager Index (PMI). The manufacturing PMI returned to positive territory -- above 50 reading signifying expansion -- late last year. The consensus of it staying there in January (albeit down slightly from December's reading of 50.1) probably understates the risk of the ongoing virus hitting both sentiment as well as actual activity. The impact could be more pronounced on services like transport, hotels, restaurant, entertainment, etc. which are typically in high demand during the festive season. This imparts a greater downside risk to the 53.0 consensus forecast of non-manufacturing PMI, down from 53.5 in December.

The December manufacturing data elsewhere in the region (Japan, Korea and Thailand) will likely pass without any fanfare. Instead, the forward-looking indicators, like consumer and business confidence indexes in Korea, will be of some interest as guides to growth coming into 2020. Australia's CPI figure for the fourth quarter will be closely-watched in light of the recent bushfires, while Singapore's jobs report is expected to show a still-elevated unemployment rate at 2.3% amid continued anaemic GDP growth.

Finally, does anyone care about Thailand's balance of payment data? Probably just the country's finance ministry and the central bank (Bank of Thailand) as they are stepping up efforts to curb the Thai baht's appreciation after a whopping 9% gain last year. They won't be pleased with our view of a wide current account surplus from the seasonal surge in tourism-related inflows in December.

✓ Hungary: Soft indicators to bounce back but expect NBH to remain on hold

We expect soft indicators in Hungary to rebound on the back of easing global tensions and sound local economic activity. Despite the recent uptick in inflation (which we see as a temporary phenomenon) and a decrease in the outstanding amount of FX swaps providing forint liquidity, the National Bank of Hungary will likely stay on hold. We don't see enough evidence locally or globally for the inflation and economic outlooks to diverge from the central bank's base case scenario, so we think the NBH will remain in 'wait-and-see' mode with no change to the monetary policy setup. Meanwhile, we expect sound labour market data, with no sign of weakness in the pipeline.
