Key events in developed markets next week

Next week our focus will be on the US jobs report, Eurozone inflation and UK consumer credit. But what else will have our attention in developed markets?

By James Knightley, Carsten Brzeski and 2 others

Key events in EMEA and Latam next week

Next week looks set to be data heavy in EMEA and Latam alongside a few central bank minutes

China | India...

Asia week ahead: Not much on the way to stem market sell-off

An intensified emerging markets sell-off will keep Asian financial assets under pressure and there is little the region's central banks can do about it

✓ US Fed: "Gradually" getting there

High-frequency data suggests that after a respectable 2.3% annualised rate of growth in 1Q18, the US economy is likely to post something around the 3% mark in 2Q18. With inflation picking up – only the core PCE deflator is below the Federal Reserve's 2% target, this should keep the Fed hiking rates "gradually", and we certainly look for another 25bp move on 13 June 2018.

However, the market remains split on whether we will get one or two further hikes in the second half of the year. We currently favour two, citing the strong labour market and rising wages, which should be highlighted in this week's jobs report. Unemployment at 3.9% has only been lower once in the past 48 years, and the lack of available workers is creating bottlenecks in the US economy. This suggests to us that wages will continue to bid higher, translating into rising inflation pressures.

Higher oil prices are also an issue that we will be watching. Gasoline prices are up 50 cents/gallon since the tax cuts equivalent to \$900 per household were announced in December. Based on average annual consumption these price rises will cost drivers an extra \$350 if maintained, so we see little downside risk to consumer confidence on the back of this. Higher mortgage rates are also a factor that may at the margin weaken sentiment. Nonetheless, it is important to remember that higher oil prices are no longer such an unambiguous negative for the US economy given the fact

3

that the US is now the World's number one producer. Jobs and investment in the sector are booming.

Eurozone: Inflation bounce back and preparations for the June ECB meeting

In the Eurozone, eyes will be on the May inflation release. The April numbers were a shocker as core inflation dropped to 0.7%, on which we should see somewhat of a bounce back this month. Unemployment could also edge down next week, which means that some good news could follow this week's disappointing PMI.

Also, next week will see an entire series of ECB officials giving speeches, probably preparing the grounds for the June meeting. A meeting which increasingly looks like another "buying time" meeting.

Eyes on UK consumer credit growth as Bank of England mulls next move

Generally, UK consumer borrowing numbers come and go each month without much attention. That was until last month when consumer credit growth unexpectedly plunged to levels not seen since late-2012. Pinning down the exact cause of this is not easy, and it could prove to be a blip (some have pointed to the snow, although it's not immediately clear why that should have made such a noticeable impact).

But according to a recent BoE credit conditions survey, we know that banks have significantly tightened standards (notably for credit card borrowing). If it becomes clear that borrowing has indeed ground to a halt, it would be another blow to battered UK retailers and would likely raise further doubts over a summer rate hike.

We'll also get the manufacturing PMI, which showed some signs of fatigue last month. A further downside miss in May would indicate that weaker Eurozone momentum is starting to bite for UK producers.

Surge in oil prices to pick up German inflation

German inflation will be the first inflation data for the ECB for May. With the recent surge in oil prices, headline inflation should pick up. Watch out once again for possible seasonal distortions of German inflation data due to several holidays and long weekends in May.

Czech GDP to confirm strong consumption and accelerating investment

Given the latest decline in the flash manufacturing PMIs in Eurozone and Germany and the somewhat weaker confidence in the Czech industry in May, Czech PMI will most likely finish below the 57 mark.

The second GDP estimate might bring a slightly higher print compared to the flash estimate of 4.5%, as was the case in previous quarters. Most importantly it should confirm strong household consumption and accelerating investments.

Article | 24 May 2018 China | India...

Asia week ahead: Not much on the way to stem market sell-off

An intensified emerging markets sell-off will keep Asian financial assets under pressure and there is little the region's central banks can do about it

India: FY18 probably ended on a weak note

India's GDP data for the final quarter of FY18 (ended in March 2018) is due on 31 May. The main positive for GDP growth in that quarter was the low base, while monthly indicators point no significant leap from the 7.2% year on year pace recorded in the previous quarter. Slower exports and wider trade deficit will drag GDP growth, while inflation accelerated above 5% to weigh down consumer spending.

However, slightly better industrial production growth informs the same about GDP growth, still supporting the consensus of a 7.3% GDP growth in the last quarter, though not enough to resuscitate investor confidence in the Indian rupee (INR).

The 5% year-to-date INR depreciation against the USD is the most among Asian currencies this year. Unlike its Turkish counterpart, the Indian central bank has no history of thrashing policy

measures, as markets set their eyes on the Reserve bank of India (RBI) policy meeting in early June. The recent market rout makes the next RBI decision as good as a coin toss.

A close correlation in India's GDP and IP growths

China: Was April manufacturing bounce a blip

China's manufacturing PMI and profits data will indicate if the acceleration of industrial production growth in the last month sustained in May. The manufacturing PMI has been bouncing around 51 over the previous two years, and so is the industrial production growth of 6% YoY. There was nothing to shock these from their long-held levels.

Advance manufacturing PMI for May from the US, Eurozone, and Japan tips the balance of risk for China's data on a weaker side. As such, we think April acceleration of China's IP growth to 7% could just be a blip that's likely to be corrected in May. Industrial profits growth slowed coming into 2018, which bodes ill for manufacturing performance in the period ahead.

Short-lived spikes in China's manufacturing activity

Bundles | 25 May 2018 17

♦ Korea: How far will exports support the economy?

A data-packed week in Korea may show economic activity reinforcing recent dovish rhetoric by policymakers.

Of more significance, however, is export data, the key driver of the economy led by electronics exports. After staging an impressive surge in the last two years, semiconductor exports appears to have plateaued around \$10bn/month this year, which if sustained will mean a sharp swing to year-on-year contraction by the second half of the year from 44% growth year-to-date. And non-electronics exports have contracted year-on-year basis in the last three months. Absent continued export strength Korea's GDP growth will remain under pressure as what the policymakers worry.

Among other Korean releases are business and consumer confidence, consumer price inflation and industrial production. According to our chief economist, Asia-Pacific Rob Carnell, the sub-target inflation, softening consumer spending, and anaemic industrial output added to the sense that Bank of Korea's policy is unlikely to change imminently.

Rob has also <u>pushed his</u> forecast timing of the next BoK rate hike from the third to the fourth quarter of the year.

Korea's semiconductor exports appear to be plateaued
