✓ US: Fed may need to toughen its stance

The market remains firmly behind the view that the Federal Reserve will raise interest rates by 50bp on 14 December given Fed speakers have indicated the likelihood of less aggressive step increases in interest rates after four consecutive 75bp hikes. However, the economic data is proving to be pretty resilient and we are a little nervous that a 7% fall in the US dollar against the currencies of its main trading partners, and the 45bp drop in the 10Y Treasury yield, is leading to a significant loosening of financial conditions – the exact opposite of what the Fed wants to see as it battles inflation. Consequently, we wouldn't be surprised to see the Fed language become more aggressive over the coming week, talking about higher terminal interest rates – with some of the more hawkish members perhaps even opening the door to a potential fifth consecutive 75bp hike in December (although we don't think they would actually do it) to ensure the market gets the message. Currently, only three officials are scheduled to speak, but we wouldn't be surprised to see more make sudden appearances in the media.

Data-wise, the jobs report on Friday will be the focus, but there will also be interest in the ISM manufacturing index and the Fed's favoured measure of inflation – the core personal consumer expenditure deflator – both of which are published on Thursday. The ISM is likely to drift just below

the break-even 50 level given the softening trend seen in regional manufacturing indicators. The PCE deflator could be interesting too since it doesn't always match what happens in core CPI. If you remember, that rose "only" 0.3% month-on-month versus expectations of a 0.5% increase and was the catalyst for the recent drop in Treasury yields, as expectations for Fed rate hikes were scaled back. A 0.4%+ print for MoM core PCE deflator could generate quite a sizeable reverse reaction. Meanwhile, the jobs numbers should hold around 200,000 given the number of vacancies continues to exceed the number of unemployed people by a ratio of 1.9:1. Nonetheless, there are more firings going on in the tech sector and the increase in initial claims also points to softer employment growth in the coming months.

Eurozone: All eyes on inflation

Has a eurozone inflation figure ever been more important than the November reading that is due out on Wednesday? With the ECB focusing more on current inflation developments for determining when to move to smaller rate hikes, the November inflation figure will be very relevant for the December rate hike decision. While energy prices have been moderating and other supply shocks are fading, the question is how quickly this impacts consumer prices. Also keep an eye out for unemployment on Thursday. Any sign of the labour market slowing will also be taken into account at the next policy meeting.

Hungary: Third-quarter GDP supported by industrial and services sectors

Next week's events calendar for Hungary is focused on one day. On the first day of December, we are going to see detailed GDP data from the third quarter. Here we expect that industrial production will show a better-than-expected performance, giving support to the net export which has suffered under the pressure of the energy crisis. Along with industry, the services sector is expected to be a key driver, which was able to limit the quarter-on-quarter drop in GDP. The manufacturing PMI has shown significant monthly volatility recently thus we see a down month in November after a significant upside surprise in October.

Asia week ahead: PMI reports to show impact of China restrictions

Regional PMI readings and inflation reports will be the highlight for the coming week

Regional PMIs

Both official manufacturing and non-manufacturing PMIs for China should be in deeper contraction in October as the number of Covid cases increased, affecting both factory and retail activities. This should also be reflected in the Caixin manufacturing PMI numbers which could show a bigger contraction, as smaller factories are more adversely affected given the challenging logistical situation.

Meanwhile, PMI indices for both South Korea and Taiwan should edge lower due to stalling demand for semiconductors from the US, Europe and China.

Inflation from Australia, Indonesia and South Korea

Next week we have Australia's October CPI inflation. Inflation data has typically only been released quarterly so this provides us with much more insight into the evolution of prices and provides much more timely updates than we have been used to. Floods in parts of Australia will have put up

fresh food prices and rising gasoline prices should also lift the month-on-month price level increase to almost a full percentage point, which would lift the inflation rate to 7.8%YoY. That ought to be close to the peak for inflation, though there are still higher gasoline prices in November to factor in, and there could still be a little further to go before peak inflation is reached.

Inflation in Indonesia will likely pick up further, with core inflation likely accelerating to 3.5% year-on-year while headline inflation should settle at 5.9% YoY. Elevated price pressures have kept Bank Indonesia busy lately with the central bank recently tightening by 50bp. We expect inflation to inch higher in the coming months which could ensure that BI will stay hawkish going into 2023.

Meanwhile, inflation in Korea is expected to decelerate quite sharply to 5.1% YoY, mainly due to base effects. Fresh food and gasoline prices stabilised during the month while pipeline prices suggest a further deceleration in the coming months.

Growth numbers from India

India releases 3Q22 GDP data next week. The 2Q figure was buoyed by base effects and came in at 13.51%, which although admittedly very high, was a disappointment, and led us to downgrade our GDP forecasts. We have 6.3% YoY pencilled in for the third quarter, as well as for the full calendar year 2023. Deficit data for October is also due, and will likely show that a modest improvement in India's debt to GDP in 2022/23 remains on track. Something in the region of INR40,000 crore would be in line with recent deficit trends.

Other key data releases

In Korea, November exports will likely be disappointing as suggested by preliminary data reports. We expect a contraction of 10.5% YoY in November as semiconductor exports and exports to China remain sluggish. Slowing export activity should translate to industrial production contracting for a fourth straight month. Semiconductor and steel production will likely be a drag, but auto production should rebound.

In Japan, the jobless rate may edge up to 2.7% (vs 2.6% in September), but overall labour market conditions remain healthy. However, given the disappointing 3Q GDP report, September industrial production is expected to drop 1.0% MoM, seasonally adjusted, with weak external demand pressuring manufacturing activity.

Asia Economic Calendar

Country	Time	Data/event	ING	Survey	Prev.
Monday 28 November					
Japan	2330	Oct Unemployment Rate	2.7		2.6
	2350	Oct Retail Sales (YoY%)	-		4.5
Tuesday 29 November					
Japan	2350	Oct Industrial O/P Prelim (MoM%/YoY%)	-1.0/6.2		-1.7/9.6
Taiwan	0830	Q3 GDP Final (YoY%)	4.1		4.1
South Korea	2300	Oct Industrial Output (YoY%)	0.2		0.8
	2300	Oct Industrial Output Growth	-0.5		-1.8
Wednesday 30 November					
China	0130	Nov NBS Manufacturing PMI	48.7		49.2
	0130	Nov NBS Non-Manufacturing PMI	48.0		48.7
