## US: Biden's massive infrastructure package will be a tough sell

With the ink on the \$1.9tn fiscal relief plan barely dry, next week sees President Joe Biden push ahead with the \$3tn Build Back Better green energy and infrastructure plan.

On Wednesday, he is heading to Pittsburgh to outline the strategy, which is centered on decarbonising US electricity production by 2050. There would be incentives and legislation surrounding energy-efficient buildings and vehicles with additional rail and road infrastructure investment. The money would also be provided to boost 5G and broadband internet access.

It looks as though these measures will be packaged up with higher taxes for corporates and top earners together with increased property and capital gains tax rates to “reward work, not wealth”.

The difficulty will be getting it passed by Congress, given the need for 60 Senators putting it forward for a vote. The Democrats got around this for the \$1.9tn plan by using budget reconciliation processes, but it will be trickier for this massive infrastructure plan. It may need to be broken up into smaller packages and diluted to some extent should Republicans put up stiff opposition. It is not going to be an easy sell.

We also have a heavy data slate with the ISM index on Thursday, and the jobs report on Friday. Both should be very strong as better weather in March versus February, a strong vaccination

programme rollout, and ongoing reopening steps taken by the individual states lift activity and the need for workers.

Nonetheless, the Fed will continue to make it clear that they won't look to tighten policy until the economy has "all but fully recovered."

## **Eurozone: Inflation set for further rise**

Eurozone inflation is set to continue its rise on Wednesday when March figures are released. Expect food and energy prices to be the main drivers for now, although there is a chance that industrial goods prices will also increase more than expected due to supply chain issues and input shortages. Also important will be the breakdown of consumer confidence figures on Tuesday. Consumers have become more upbeat, but have their spending expectations also risen, with vaccinations likely to provide relief in the coming months?

## Key events in EMEA next week

Purchasing Manager Indexes (PMIs) are in focus in the Central and Eastern European region next week, as both supply chain disruptions and new containment...

Source: Shutterstock

### ✓ Hungary: Unemployment to jump and PMIs to fall

In Hungary, the focus will be on the labour market and production. We expect to see the monthly unemployment rate jump to a new peak in February, pushing the three-month average closer to 5%.

When it comes to wages, figures don't cover part-time workers, where we've seen an increase in employment among sectors providing in-person services. Among full-time workers, which are included in wage data, those on lower incomes are more likely to have lost their job during the pandemic. This change in composition has meant that wage growth appears artificially higher. Having said that, the delayed minimum wage increase should reduce wage growth significantly in January.

On the production side, we see producer prices rising further due to base effects and energy prices, while the manufacturing PMI will show a contraction, in our view. This will reflect the impact of the new wave of containment measures (including the closure of kindergartens and schools) on employers.

## ✓ Czech Republic: Supply chain issues weigh on firms despite better PMIs

Given the improvement in preliminary manufacturing PMIs in Germany and the eurozone in March, the Czech PMI due next week is also likely to increase above February's 56.5 level. Still, we expect more modest growth than in Germany as Czech companies are struggling with disruptions in supply chain deliveries causing production delays, and one Czech Toyota plant announced a two-week shutdown at the end of March due to missing chipsets.

# Asia week ahead: Look for more evidence of firmer activity

The usual end- and start-of-the-month activity releases pack the Asian economic calendar in a holiday-shortened week

Source: Shutterstock

## ➔ Soft data – Purchasing Manager Indices

The typical focus around this time of the month is the manufacturing and service sector PMIs. Released earlier this week, the advance PMIs for March from developed economies (the US, eurozone and Japan) revealed firmer activity in both manufacturing and non-manufacturing areas. We hope to see the same in Asian PMIs next week.

China's PMIs are the usual standouts and are expected to follow their developed market counterparts higher. If you want a sense of how these could go -- industrial profits data for February due over the weekend (27 March) should be a good guide. As for most other February

indicators, the low base effect likely swelled profit growth.

Among other soft indicators coming our way, are Japan's quarterly Tankan Survey for 1Q21 and Korea's Business Survey Indices for April, both expected to show some pick-up over the previous periods.

## ➔ **Hard data - Exports and manufacturing**

Markets will also be swamped with hard activity releases on trade and manufacturing, which come as guides to the post-Covid recovery.

Korea's exports for March, the first export data for this month from the region, will be an interesting insight into the semiconductor cycle as the global chip shortage continues to make financial headlines. A 14% year-on-year rise in Korean chip exports in the first 20 days of the month was good news that the full-month data should testify to. Meanwhile, Korean industrial production for February is likely to show some retracement of growth, though that's clearly a distortion from the Lunar New Year holiday rather than underlying weakness.

Japan and Thailand are other countries reporting industrial production and Malaysia is going to release its trade data -- all for February, We see nothing particularly exciting in these.

Lastly, Korea and Indonesia's consumer price data may be something worth watching as inflation worries are mounting elsewhere. We don't think a sharp rise in inflation will be a cause for concern at the Bank of Korea just yet, while Bank Indonesia remains relaxed on this front.

## **Key events in Asia**
