Asia week ahead: PMI data from China and India

Next week we'll get PMI data from China and India plus several data reports from Korea

By Min Joo Kang

Key events in developed markets next week

Next week is packed with central bank meetings. We see the Federal Reserve raising rates by 25 basis points, given inflation is moving in the right direction. For the European Central Bank, a rate hike of 50bp looks like a done deal, and we believe the Bank of England is likely to follow in the ECB's footsteps, given wage growth is persistently high

Source: Shutterstock

✓ US: A slowdown in the pace of tightening

Two major events in the US will shape market sentiment next week. First is the Federal Reserve policy meeting, where we expect it to raise the policy rate by 25bp. Having raised rates by 75bp on four consecutive occasions last year and then lifted the policy rate by 50bp in December, this marks a clear slowdown in the pace of tightening and appears justified given inflation is moving in the right direction and activity is slowing. However, the Fed remains wary and will again suggest that this is not the end for interest rate increases. The central bank will also be keen to dismiss the notion that it is preparing for potential rate cuts later this year. Financial conditions have loosened given movements in the dollar, Treasury yields and credit spreads and it may feel that any further loosening, fuelled by talk of potential policy easing in the second half of the year, could undermine its current actions in fighting inflation.

We will then be looking at the January jobs report. Employment creation remains strong for now, but job lay-off announcements are coming in thick and fast. We are nervously watching what happens to the temporary help component, which has already experienced five consecutive

monthly falls. Given the nature of the role, which is easier to be hired into and fired from, this tends to lead to broader shifts in employment. As such, we expect to see a softer non-farm payrolls increase than seen in recent months, but it is still likely to be well above 100k given the large number of job vacancies that remain. [Read our full Fed preview here.](#)

✓ UK: Bank of England to stick to 50bp hike following recent inflation data

The Bank of England looks more likely to follow the European Central Bank than the Federal Reserve next Thursday, and we expect a 50bp rate hike for the second consecutive meeting. While the minutes of the December meeting appeared to open the door to a potential downshift to a 25bp move next month, the reality is that the recent data has looked relatively hawkish. Wage growth is still persistently high, both in the official numbers and the BoE's own business surveys. Headline inflation came in a little lower than the Bank projected back in November, but services CPI – seen as a better gauge of domestically-driven inflation – has come in above expectations.

Still, if we get a 50bp hike on Thursday then it's likely to be the last. BoE officials have suggested that much of the impact of last year's rate hikes is still to show through, and cracks are forming in interest-rate-sensitive parts of the economy. We expect one final 25bp hike in March, taking the Bank Rate to a peak of 4.25%. The key question for Thursday is whether the Bank itself acknowledges its work is nearly complete. We suspect it's more likely to keep its options open. [Read our full preview here.](#)

✓ Eurozone: ECB to hike by 50bp; Lagarde to make hawkish statement

When the European Central Bank meets next week, all eyes and ears will once again be on communication. A rate hike of 50bp looks like a done deal, but how far and how fast the ECB will go from there is still unclear. We expect hawkish comments by ECB President Christine Lagarde in order to prevent another drop in market interest rates. Current market expectations about ECB rate cuts in 2024 are premature. [Read our full ECB preview.](#)

Key events in EMEA next week

The first Czech National Bank meeting of the year will take place on Thursday. The Board believes inflation expectations will remain anchored and that overall inflation will return to levels around 2% in two years. Thus, we expect the interest rate to remain at 7%. In Turkey, we predict January inflation will be 3.5% month-on-month

Source: Shutterstock

✓ Turkey: Risks are on the upside

We expect January inflation of 3.5% month-on-month, leading to a further decline in the annual figure down to 53% from 64.3% at the end of 2022 due to strong base effects and stability in the currency. However, given deeply negative real interest rates, further disinflation would be quite challenging, while risks to the outlook this year are on the upside with significant deterioration in pricing behaviour, higher trend inflation and still elevated level of cost-push pressures.

✓ Czech Republic: Central bank to confirm stable rates and present new forecast

In the Czech Republic, we expect the flash GDP estimate for the fourth quarter to show the economy entered into a mild recession. The increase in consumer prices has weighed heavily on purchase power hence private consumption decreased markedly. Despite the deterioration of the economic stance, inflation remains elevated and it seems likely we will see an increase in CPI

growth from December levels of 15.8% to above 17%. Still, the dovish bank board is not expected to increase the interest rate from 7%, where it has remained since June last year.

According to recent statements by board members, everything is pointing towards the same outcome as we saw in the second half of the year; five votes for stable interest rates and two votes for a rate hike. Thus, the main focus will be on the central bank's new forecast, especially on expected inflation for January and February. Given the upside risk due to the new year repricing, the tone of the meeting should remain the same: "higher rates for longer" and "don't rule out a rate hike at the next meeting". We expect rates to remain unchanged throughout the first half of the year and the topic of rate cuts to be open in the third quarter.

Asia week ahead: PMI data from China and India

Next week we'll get PMI data from China and India plus several data reports from Korea

India's budget deficit and PMI data release

India is set to release the fiscal deficit figures for December. The deficit numbers for the second half of 2022 were significantly higher than the 6.4% budget deficit target. If the rise in deficit does not slow over the coming three months, we expect a deficit of about INR930bn for December 2022 and last year's 6.7% deficit is likely to be exceeded.

Additionally, the January PMI data for India is to be released. Recent trends have been positive for both the manufacturing and service sectors, though given the tough external backdrop, a small statistical pullback may be due.

China PMI and Taiwan industrial production data expected

China will release PMI data for December next week and manufacturing PMI should remain in contraction while non-manufacturing PMI should recover slightly. A similar pattern should be expected for the Caixin PMI report.

Also reported in the coming days will be Taiwan export orders and industrial production. Both indicators should record even deeper contractions in December as external demand weakened.

Flurry of data from South Korea

As weak fourth-quarter GDP suggested, we believe that industrial production should continue to drop in December. Meanwhile, exports are expected to decline for a fourth consecutive month. Sluggish exports of semiconductors and petrochemicals should be the main reason for the decline.

Meanwhile, the Bank of Korea will be keenly watching inflation, which is expected to slow to 4.9% YoY in January (vs 5.0% in December). Gasoline and electricity fee hikes will result in a sharp rise in prices on a month-on-month basis but the base effect should anchor the year-on-year headline number. Finally, the manufacturing PMI will likely decline from the previous month, staying below the 50 threshold for the seventh month in a row.

Japan reports unemployment and industrial activity

Japan will release its jobless rate and December industrial production next week. Japan's jobless rate is expected to remain unchanged at 2.5%. Services hiring is expected to increase with a strong pickup in the hospitality and travel industry offsetting a decline in manufacturing. December industrial production should drop sharply based on weak business surveys and export data, which adds more downside risk to 4Q22 GDP.

BI to monitor core inflation for cues on monetary policy

Price pressures in Indonesia have abated somewhat as evidenced by the decline in headline inflation from the peak of 6%YoY last year. We could see a further deceleration in headline inflation to 5.4%YoY, although core inflation remains elevated at 3.4%YoY.

Bank Indonesia (BI) Governor Perry Warjiyo warned that inflation could stay elevated in 2023 and this could weigh on the growth momentum. We believe BI will be monitoring core inflation on top of the performance of the IDR for cues on monetary policy this year.

Singapore retail sales likely to moderate

Retail sales in Singapore are expected to moderate further to 4.9%YoY from 6.2%YoY given elevated prices and slowing economic activity. We expect the trend of contraction for supermarkets and convenience store sales to continue while sales at department stores and recreational goods are expected to stay positive.

Meanwhile, the increase in the goods and services taxes to 8% this year should be another reason for retail sales to slow further in the coming months.
