Key events in developed markets next week

Different week, same old story; the US's strong growth prevails with expectations of a 4%+ GDP reading in 2Q18, but it seems we can say quite the opposite for Sweden...take a look to see what else is going on in developed markets next week

Source: Shutterstock

🕑 US Staying Strong

The US experienced robust growth in 2Q18, which we expect will be underlined by a 4%+ GDP reading. Consumer and business activity has been boosted by massive tax cuts with the positive momentum carrying over into 3Q. As such, employment growth remains strong, with unemployment set to dip back below 4% on Friday while payrolls look set to rise by around 190,000 in June - above the average for 2017. With the ISM surveys continuing to point to strong economic expansion and with inflation measures continuing to move higher, the Federal Reserve is likely to sound a little more positive on the economy at Wednesday's FOMC meeting but stick to its "gradual" approach to policy tightening. No change from the Federal Reserve next week but we do look for a hike in September.

Solution Bank of England to hike – but don't expect another rate rise for a while...

Some of the more recent numbers have been mixed, but overall we suspect the data flow since the May Inflation Report will give the Bank of England confidence that the economy has rebounded

from the first quarter soft patch. We expect a rate hike next week, but it will be interesting to see what the Bank has to say on its next steps.

After August, markets are barely pricing in another rate hike before the end of 2019. We suspect policymakers would prefer investors to expect an earlier move, however realistically we think the Bank will struggle to hike rates again for quite some time. As long as Brexit talks remain in deadlock (specifically over the Irish backstop), talk of 'no deal' will only increase. If this starts to hit sentiment, it would complicate efforts to tighten policy further.

We therefore suspect the Bank will keep its cards close to its chest next week on the timing of its next move. We currently don't expect a hike again before May 2019, at the earliest.

🕑 Swedish growth slowing down

We expect 2Q GDP released on Monday to come in at 0.5% QoQ, down from 0.7% QoQ in 1Q. The July manufacturing PMI survey out on Wednesday and the latest forecast from the National Institute of Economic Research (out on Friday) are also likely to indicate slower growth in the second half of the year. So far, it is the slowing housing market and softer economic momentum in key trading partners in Europe that are the key drivers for weakening Swedish GDP growth and things could get considerably worse if US trade policy escalates further.

🕑 Core inflation worries for Germany

In a typical post-ECB meeting week with little macro data out, Germany's inflation data could once again stress the ECB's current dilemma; headline inflation is on target but core inflation is far below.

Asia week ahead: Will July data testify to trade war impact?

Korea's July trade data and central bank policy meetings in Japan and India will be the highlights next week

Some relief on the trade front, but not a whole lot

A raft of economic data for July will come as the first test of the trade war that kicked off earlier this month.

While the 'soft' data on manufacturing purchasing managers' indexes (PMIs) may show the impact on sentiment, the hard data on trade should provide some sense of the actual hit. This keeps Korean trade data for July, the first for the month from Asia and probably the world, in the spotlight.

We expect a small annual decline of 2.6% in Korean exports - the second consecutive negative print.

Korean export growth in July

However, the trade data will also be weighed against the latest positive signs of more free trade across the Atlantic, which should limit the negative impact for markets of any bad trade report.

The US-EU deal to lift all bilateral trade tariffs may be a hopeful sign of a potentially positive end to the global trade war. But the hopes may be misplaced as the next stage of US tariffs on \$16 billion of Chinese exports looms large and this will, in all likelihood, face an equal amount of retaliation from China. As such, the trade risk is here to stay in the driving seat for the market.

Central bank policy dilemma

Central banks in Japan and India will be in the spotlight for their monetary policy decisions.

Until recent reports about the Japanese central bank possibly tweaking policy, there was little to no market interest in the upcoming Bank of Japan policy decision on 31 July. The two possible tweaking options are:

1) Adjusting or abandoning the 2% inflation target, as might have been heralded by the BoJ when it dropped the reference to an inflation target in its April policy statement, and 2) Adjusting the pace of asset purchases, which too have undershot the target.

We don't think the first of this is on the table but the second might be. Here is what our Chief Economist Asia-Pacific, Rob Carnell, thinks about the **BoJ policy confusion**.

We think the policy confusion for the Indian central bank might stem from recent developments of re-acceleration in the country's consumer price inflation above 5% in June and some stabilisation of the Indian rupee exchange rate in July. While we observed from the high-frequency data that GDP growth slowed down in the last quarter, we believe inflation and currency stability remain a strong argument for the RBI to remain on the tightening path. We forecast it will hike rates next week and again in October.

Read why we're now looking for two rate hikes in India this year

Hungary expected to be on the brighter side of 'soft' European indicators

In Hungary, we are looking for a further acceleration of PPI, as in Germany and China. Across Europe, 'soft' economic indicators have been mixed but we believe Hungary will be on the brighter side, with manufacturing PMI posting an increase - particularly because of recently announced new capacity, which should fuel optimism. Retail sales are to remain strong; we see a significant contribution from consumption in the 2Q18 GDP reading.

🗹 Turkish prices are on the up

We expect July inflation at 0.9% pulling the annual figure up to 16.3% from 15.4%. This is due to the recent sharp increase in price pressures from the FX pass through, upward pressure from domestic PPI and unsupportive base effects.

🕑 Will the Czech National Bank deliver yet another rate hike?

We were rather sceptical a few weeks ago that the Czech National Bank (CNB) would deliver another rate hike following the one in June. But the latest comments from CNB representatives suggest that another hike next week is slightly more likely than remaining on hold. Indeed, Chief Economist Tomas Holub signalled such a huge change in the recent staff forecast (due to the weak koruna) that even less hawkish board members might be persuaded to vote for another 25 basis point rate hike in August. This message from the chief economist had only limited impact on CZK, remaining above the 25.6 EUR/CZK level. Some board members might feel uncomfortable tightening monetary conditions just one month after a previous hike and might decide to remain on hold to see if weak CZK assumptions persist. The likelihood seems to be skewed to a hike now, which has become our base case.
