## ✓ US: Labour supply issues may resonate in jobs report, but ISM surveys should be strong

The US jobs report is the undoubted highlight next week after the disappointing outcome of “only” 266,000 jobs created in April. There seems to be little problem with demand given the robust economic data and surveys, such as the NFIB’s, indicating that businesses are struggling to find labour. Instead, the problem is supply – firms cannot fill vacancies.

Firstly, a significant number of children continue with homeschooling, so parents are having to stay home. Secondly, there is some hesitancy from some quarters about returning to work, given the pandemic isn’t over. Thirdly, older workers who may have lost their jobs may have chosen to take early retirement and leave the workforce. Finally, extended and uprated unemployment benefits may have diminished the financial attractiveness of taking a low paid job, particularly when you factor in commuting, lunch, childcare etc.

The school situation will end in September, while 23 states have already announced they are ending the payment of the \$300 weekly unemployment benefit next month (with it ending elsewhere in September). Consequently, we should see labour supply come back, but we may face

a window of perhaps 2-4 months where businesses struggle to fill their vacancies and employment disappoints. However, it also means that companies that do need to open and expand end up paying more for workers as competition for staff heats up. As such, we expect to see a softer than consensus 500k in jobs in May, with wage rates showing signs of picking up a touch.

Other than that, we have the ISM business surveys, which will be strong but also highlight the supply bottlenecks that are leading to shortages and higher prices.

Canada's GDP will rebound sharply on the back of a good performing vaccine programme and economic resilience that has even surprised the central bank. A decent jobs figure is also likely, and this could fuel expectations of a third quantitative easing taper announcement from the central bank in July.

### **Eurozone: Inflation and unemployment data in focus**

Eurozone inflation will be a key figure for next week because it's the last major data point ahead of the closely watched European Central Bank meeting on 10 June. Expect it to rise further on base effects but also look for the reopening impact on services inflation and input shortages working their way through to goods inflation figures. Selling price expectations among manufacturing businesses are at an all-time high, meaning that some passthrough can be expected over the coming months.

Also relevant will be the unemployment numbers for April. This will provide a good snapshot of the labour market recovery and will be relevant for the ECB's medium-term outlook.

## **Developed Markets Economic Calendar**

Country	Time	Data/event	ING	Survey	Prev.
<b>Sunday 30 May</b>					
<b>Monday 31 May</b>					
Germany	1300	May CPI Prelim (MoM/YoY%)	0.0/2.2		0.7/2.0

## Asia week ahead: India in the spotlight

A big data week in Asia will offer central banks a glimpse into unfolding growth-inflation risks as two of them meet next week. India will take the spotlight for fourth quarter FY20-21 GDP report as well as the Reserve Bank of India meeting

Source: Shutterstock

### ➔ Start-of-the month activity data

The usual Asian calendar highlights at the start of the new month are the purchasing manager indices and inflation figures for the previous month.

The advance PMIs for May from developed economies (the US, Eurozone and Japan) painted a mixed picture – the US and Eurozone’s revealed firmer activity in both manufacturing and non-manufacturing areas, whereas Japan showed weakness in both sectors. Big swings, however, were observed in services PMIs, and it looks like these are driven by the Covid-19 situation, which has been stabilising in the US and Europe but worsening in Japan.

We expect the PMIs from the rest of Asia to follow the same course – improving in countries with falling Covid-19 cases and weaker in those with rising infections. The most market-sensitive PMI data will be from China, which are expected to be solid like the US and Eurozone, while PMI data from Malaysia, Singapore and Taiwan should be in the weak camp.

Korea's exports for May, the first export data for this month from the region, will be an interesting watch for what it says about the global semiconductor cycle and provide further insight into the export-led recovery in Asia. A 26% year-on-year rise in Korean chip exports in the first 20 days of the month was good news that the full-month data should confirm.

Lots of consumer price indices will reinforce elevated inflation pressure, though that mostly comes off the sharp inflation fall a year ago instead of any underlying demand strength currently. And the fact that this is going to be a brief phase of high inflation suggests that this data won't work up the markets.

## ➔ Monetary policy spotlight on India

All this data offers a glimpse into unfolding growth-inflation risks for regional economies, though we don't think this will sway central banks into altering the current easy policy settings just yet. This is because the downside growth risk from persistent global pandemic continues to outweigh upside inflation risk while the latter will be transitory anyway. Hence our view of on-hold policies by two regional central banks meeting next week – the Reserve Bank of Australia and the Reserve Bank of India. Not just us, but it's also the consensus view.

The unchanged policy forecasts may render these policy meetings non-events. Yet, we anticipate some market interest in the Indian central bank meeting next Thursday (3 June) as the economy took a further beating from the second wave of Covid-19. Coming just days ahead of the RBI meeting, India's GDP report for January-March 2021 or the last quarter of FY20-21 due on Monday (31 May) will be the timely input for the policymakers, although that's not going to reflect the true damage from the second wave. We are looking for a 1.7% YoY GDP growth in the reporting quarter, up from 0.4% in the previous quarter and helped mainly by low base effects.

It's the delicate policy balance the RBI ought to strike to revive growth without further stoking inflation. As the elevated inflation prevents the RBI from cutting policy interest rates further, the targeted easing remains their option. This is what underlined Governor Shaktikanta Das's unscheduled announcement earlier this month (5 May) of additional liquidity support for the healthcare and small business sectors. We believe Governor Das will reaffirm that support next week, though without any recovery in business confidence all that may be in vain.

## Asia Economic Calendar

Country	Time	Data/event	ING Survey	Prev.
<b>Sunday 30 May</b>

## Key events in EMEA next week

Several releases from Hungary should maintain the optimistic sentiment next week while price pressures in Turkey are likely to remain but GDP data should show strength and Russia is expected to increase FX interventions to US\$2.6bn in June

Source: Shutterstock

### ✓ Hungary: Upbeat data across the board

Hungarian manufacturing purchasing managers' index will reflect the recent upbeat global sentiment on the economic rebound, suggesting a significant improvement in manufacturing performance going forward. We'll also get April retail sales data, which will be affected by the low base and the gradual reopening process, which started in April.

Finally, we'll see the details behind the astounding first-quarter economic activity, and we think the main surprise will be from the domestic demand side (mainly from investments).

### ✓ Turkey: Price pressures remain elevated

We expect pricing pressures to remain high with annual inflation standing flat at 17.1% in May (1.3% on monthly basis), in comparison to a month ago.

This is down to the government's decision to pass some of the recent energy price increases to consumers, continuing cost-push effects and worsening inflation expectations while risks are on the upside given uncertainties in price adjustments with the reopening in the economy. 1Q growth,

on the other hand, will likely be strong at 6.2% YoY including base effects, though sequential growth is expected to lose momentum given the impact of pandemic restrictions, and tightening policy framework.

## ✓ Russia: Increase in FX interventions and positive activity data

On 3 June, the Russian finance ministry is likely to announce an increase in FX interventions from US\$1.7 bn in May to US\$2.6bn in June, following an increase in the average monthly Urals price by US\$4/bbl. Given the stabilisation of oil prices amid Iranian nuclear deal expectations, the temporary [sweet spot](#) for rouble in May, is most likely coming to an end.

In other news, the Russian statistics agency, Rosstat will hopefully release the complete set of activity data for April after the significant delay.

To remind you all, we expect those to be strong, mainly on the back of low base effects, as April - May 2020 were the only two months of strict lockdowns in Russia. We expect retail trade, which may show at least 24% YoY growth, to have benefitted from a lack of foreign tourism and higher leverage, confirmed by the recent banking statistics. Meanwhile, the recently published [industrial output](#) data was even stronger than expected, suggesting an upside risk to the forecasts.

## EMEA Economic Calendar

Country	Time	Data/event	ING Survey	Prev.
<b>Monday 31 May</b>				
Turkey	0800	Q1 GDP Quarterly (YoY%)	6.2	5.9
Poland	0900	Q1 GDP (QoQ/YoY%)	-/-	0.9/-1.2
<b>Tuesday 1 June</b>				
Russia	0700	May Markit Manufacturing PMI	-	50.4
Turkey	0800	May Manufacturing PMI	-	50.4
