Key events in developed markets next week

A busy week ahead filled with central bank meetings. The Federal Reserve's FOMC meeting is set to result in a 75bp rate hike given that annual rates of core inflation are heading higher. On the other hand, we believe that for the Bank of England, a 50bp rate hike is narrowly more likely than the 75bp most are expecting, due to policy U-turns in recent weeks

Source: Shutterstock

US: fourth consecutive 75bp hike incoming

Markets will have a broad range of US data and events to digest over the next couple of weeks. Wednesday's Federal Reserve FOMC meeting is set to result in the fourth consecutive 75bp rate hike given that annual rates of core inflation are heading higher rather than lower, the economy has returned to growth with a decent third-quarter GDP report, and the labour market remains robust with job vacancies exceeding the number of unemployed Americans by four million.

The tone of the press conference and the outcome of next Friday's jobs report will then help markets firm up expectations for what the Fed may do in December. There have been hints that officials could open the door to a slower pace of rate hikes, and after 375bp of interest rate increases (after next Wednesday) there is a strong argument for taking stock of the situation.

Unfortunately, the data hasn't been moving in the right direction and we would probably need to

see a noticeable slowdown in the month-on-month rates of core CPI increases from 0.5/0.6%MoM towards 0.2/0.3% to give the Fed the confidence to moderate the pace meaningfully. At this stage, we just aren't confident that this will happen in time for the December FOMC meeting so there remains the strong possibility that we get a fifth consecutive 75bp hike versus our current 50bp view.

Attention will then switch to the midterm elections that will be held on 8 November. [In our preview](#), we set out different scenarios and potential impacts. The polls seem to be shifting in the direction of a Republican-controlled Congress, which will greatly limit what President Joe Biden can achieve in the second half of his presidential term. This means less government influence on the economy and will put more pressure on the Fed to cut rates in the second half of 2023 to support the economy, as nothing will come from the fiscal side.

✓ UK: Bank of England could surprise markets with a smaller rate hike

It was unthinkable only a few weeks ago, but we now think a 50bp rate hike is narrowly more likely than the 75bp Bank of England rate hike markets and most economists appear to be expecting.

It's undeniably a close call, and whatever happens, the committee is likely to be heavily divided. But in recent speeches, policymakers have been signalling that markets are overestimating the amount of tightening left to come. Meanwhile, following the various policy U-turns of recent weeks, the expected boost from fiscal policy now looks similar to what was expected before September's meeting, when it opted against a 75bp move. With the latest data not providing a clear justification for a faster hike, and sterling now stronger than it was before September's meeting, we think there is a good chance now that the Bank will underdeliver on market/economist expectations. [Read our full preview here.](#)

✓ Norway: Norges Bank to deliver one final 50bp rate hike

Having opted for multiple 50bp rate hikes through the summer, Norway's central bank hinted it could slow the pace back to 25bp for its final few moves. The question for next week is whether it instead decides to continue to front-load tightening, and we think it will. Higher overseas rate expectations and another massive upside surprise on inflation suggest we should expect another 50bp hike on Thursday. However that would take the central bank close to the end of its hiking cycle, and we are pencilling in one (or perhaps two) more 25bp moves before it pauses.

Asia week ahead: RBA meeting and regional PMI readings

The Reserve Bank of Australia (RBA) will likely revert to heftier rate hikes, while PMI reports from across the region could indicate differing growth outlooks

Regional PMI reports out in the coming days

China will release PMI data next week and we expect slight gains for both manufacturing and non-manufacturing activity. Given the start of the export season, factories should be busier than during the previous month. Meanwhile, the Golden Week in early October – a seven-day holiday when tourists and shoppers flock to sites and shops – should bring some temporary recovery for retailers and restaurants.

For Taiwan, manufacturing activities should continue to be weak due to a fall in demand for semiconductors, laptops and smart devices. Soft demand should keep the manufacturing PMI well below 50. For the same reason, capital outflows from the Taiwan stock market will likely lead to a mild fall in foreign exchange reserves.

RBA to revert to heftier rate hikes

The coming week also features Australia's November central bank rate meeting, where after the big upside miss to 3Q22 inflation, we think the bank will have to return to 50bp of tightening after it dropped to just 25bp at the October meeting.

Early returns from Japan's reopening

Japan's activity is expected to continue recovering due to the reopening and revitalisation of the auto industry. Both industrial production and retail sales are expected to grow. Improved economic activity should keep respective PMIs above 50, suggesting positive momentum for the nation's recovery in the near term.

Korea weighed down by slowing trade activity

In Korea, activity data should be soft due to slowing trade data, although the projected dip should be partially offset by gains in the automobile sector. This trend should be reflected in September's industrial production data. Industrial production in September will likely record a contraction for the third consecutive month with persistent inventory stocking.

Korea's services sector should continue to recover but at a slower pace than during the previous months. Meanwhile, investments are expected to remain positive, as suggested in solid equipment imports. On the other hand, exports could record a small gain in October, but the trade deficit will likely still widen. We are now concerned as exports next year will likely turn negative with unfavourable base effects.

Retail sales from Singapore and Australia

Australian retail sales for September may reflect the high prices of many food items as shown in the recently published inflation numbers for 3Q22. This could bias the month-on-month figures higher, though adjusted for inflation we would expect to see spending growth beginning to slow down.

In Singapore, retail sales are expected to slow on a month-on-month basis as fast-rising prices weigh on purchasing power. The return of foreign visitors may provide some support, but overall momentum is clearly slowing.

Inflation in the spotlight

Inflation in Indonesia and the Philippines will likely heat up further. Indonesia's recent price increase for subsidised fuel is expected to push transport costs higher. Meanwhile, Philippine inflation will likely move past 7% after food prices rose sharply due to crop damage from recent typhoons.

In Korea, we can expect to get CPI inflation and the October MPC meeting minutes. Headline inflation is expected to accelerate again in October mainly due to the rise in utility rates and the weak Korean won, but October's number should still be below the July peak of 6.3%.

Other key data releases: India's budget figures

India releases deficit figures for September. The numbers have been running a little on the high side on a cumulative basis, so a figure equal to or lower than last year's number for September (INR

58,842 Crore) would help to put India's public finances back on track to meeting the 6.4% deficit target for the fiscal year.

Key events in EMEA next week

The third monetary policy meeting under the new Czech National bank will take place next Thursday. We believe interest rates will remain unchanged, as inflation is expected to be revised downward. On the other hand, Turkish and Polish inflation has continued to trend upward, and we see no signs of it levelling off soon

Source: Shutterstock

✓ Turkey: Annual inflation expected to increase further

In October, we expect annual inflation to further increase to 86.2% (4.1% on a monthly basis) from 83.5% a month ago, given continuing broad-based pricing pressures on the back of a largely supportive policy framework along with less gradual currency weakness weighing on TRY-denominated import prices.

✓ Poland: No signs of polish inflation levelling off soon

October CPI: 18.1% year-on-year

Our forecasts indicate that CPI inflation increased further in October and probably slightly exceeded 18% year-on-year on the back of a sharp monthly increase in petroleum prices and further growth of energy and food prices. At the same time, we expect that core inflation continued trending upward. There are no signs of inflation levelling off soon and the momentum of core inflation remains high.

October Manufacturing PMI: 42.2 percentage points

Following a surprising upswing in manufacturing PMI in September, we expect the assessment of conditions in the domestic industry by purchasing managers to deteriorate again in October. Although supply-side bottlenecks eased recently and the energy outlook for the European industry is less challenging, elevated prices and softer global demand (decline in new orders) are projected to continue weighing on manufacturing activity in the coming quarters.

Czech Republic: CNB rates set to remain unchanged, again

The third monetary policy meeting under the new Czech National Bank (CNB) leadership will take place on Thursday. We expect interest rates to remain unchanged. Thus, the central bank's new forecast will be the main focus. Compared to the August forecast, we see the biggest deviation in inflation, which surprised to the downside. In September, this deviation came in at 2.4 percentage points. Therefore, here we can expect the biggest downward revision in the new forecast. Nevertheless, the interest rate forecast can be expected to remain roughly similar to the CNB's summer version, indicating a rate cut in the next quarter due to the nature of the central bank's model.

On the FX side, we don't expect much change in the forecast weakening trajectory of the koruna under the pressure of the declining interest rate differential. However, we don't see much implication for FX interventions, which are fully decoupled from the CNB forecast and depend only on the discretionary decision of the board. But, at the moment, we see the CNB in a comfortable position with no reason to change anything about the current regime. In the long run, we do not expect any further CNB rate hikes. Despite the board's highlighting of the wage-inflation risk, we believe that the stability or decline in annual inflation combined with a weaker economy will be enough in the coming months for the CNB to confirm the end of the rate hike cycle at future meetings. [Read our full CNB preview here.](#)
