### US juggernaut continues

Despite all the market worries about trade wars, the US economy goes from strength to strength.

The latest Atlanta Fed NowCast estimate for 2Q GDP growth is 4.5% based on the data flow for the quarter so far. This week we will see more evidence of excellent performance of the economy with the key business surveys remaining at elevated levels and the US economy continuing to add jobs in significant numbers. There is an outside chance the unemployment rate falls to a new 50 year low of 3.7% while the annual rate of wage growth could tick up to 2.8%. There may also be some better news on trade with the US deficit set to hold onto recent improvements given data on goods already released. As such we think the Federal Reserve will continue with its policy of gradual rate hikes. We look for a 25bp move in both 3Q and 4Q.

### German politics to dominate Eurozone headlines

Not a whole lot to focus on in terms of eurozone data next week. Look for German industrial data for May and the eurozone unemployment rate, which could give perspective on how deep the soft patch has remained in Q2. At the same time, the aftermath of the European Summit and the impact on German politics could dominate headlines even more than the macro data.

## Watch out for slippage in UK PMIs as the Bank of England mulls an August hike

We expect both the manufacturing and services PMIs to slip slightly next week. The UK manufacturing sector is showing signs that it is beginning to flag a little as European demand slows. Meanwhile, the service sector, which admittedly has regained some poise after the snow, continues to be plagued by political uncertainty and in the case of consumer-facing firms, ongoing household caution.

But barring a significant deterioration in sentiment, we doubt this will change the minds of BoE rate-setters when it comes to a rate rise in August. A summer hike still looks more likely than not.

## UK ministers set for showdown as PM May pushes softer Brexit stance

Amid concern about the lack of a solution for the Irish border question, and increased warnings from business about the potential frictions at UK ports, it looks as if the government position on Brexit is softening. Reports suggest Prime Minister Theresa May is gearing up to keep the UK as a whole in both the customs union and the single market for industrial goods – albeit perhaps not technically under those names.

But getting her ministers on-board with this plan will be tricky, and Friday's meeting has the potential to be very heated. High-profile ministerial resignations cannot be ruled out, and that's before the plan has gone to Brussels, where it is likely to be met with similar resistance.

## Riksbank in focus

Next week's Riksbank policy meeting is likely to be a non-event. Having revised its rate forecast downwards in April, and with the outlook broadly unchanged since there is little reason for the Swedish central bank to change its stance at this point.

Sweden also sees the week-long Almedalen political conference, where the country's politicians will set out their positions ahead of national elections in September.

## Developed Markets Economic Calendar

# Asia week ahead: Weak trade and FX, high inflation

Inflation data crowds the calendar with Korea, Taiwan, Indonesia, Thailand and Philippines reporting CPI for June. As an all-out trade war looms,...

## Trade war is upon us

The threat of an all-out trade war will continue to dominate the headlines before the US implements \$34 billion of tariffs on Chinese goods on 6 July. China has vowed to retaliate on an equal scale and intensity. The stakes are high but so are the hopes that the two countries will come to terms in averting the war in a last-minute deal.

Meanwhile, the tensions will weigh on trade from the rest of Asia. Korea's trade data for June will be a testimony of this. The 4.8% year-on-year fall in Korean exports in the first 20 days of June was alarming, a sign of already weakening export momentum. The weak trade sentiment is further reflected in the Korean won as Asia's worst currency with 4.1% month-to-date depreciation.

# 2.3% YoY

## Korean export growth in June

ING forecast: down from 13.5% in May

### Currency weakness is inflationary

Inflation data crowds the calendar next week as Korea, Taiwan, Indonesia, Philippines, and Thailand report CPI for June. The usual focus here is on Indonesia and the Philippines, Asia's high inflation economies.

We anticipate some inflation relief in Indonesia, with our forecast slowdown below 3% year on year for the first time in two years on the lower transport component. The risk to this view stems from the seasonal food price spike during the Muslim holy month of Ramadan. In the Philippines, 4.6% YoY inflation in May was the highest since 2011. We expect a further rise to 4.7% in June.

Inflation in other reporting countries is benign so far. But the risk of trade-related currency weakness fuelling inflation in the future is on the rise. The Asian central banks will have a challenging time in striking a growth-inflation balance in the event of an all-out trade war.

### Asia Economic Calendar

## Key events in EMEA and Latam next week

Czech consumers to remain confident, continued deceleration in Hungary and the Romanian central bank seems sceptical on budging its rates. Read more for...

Source: Shutterstock

### ✓ No change in the National Bank of Poland's policy

We expect a little deterioration of sentiment in manufacturing with the PMI index mirroring developments of this sector's confidence in Germany. CPI inflation should remain low compared with other CEE states, supporting no change in the National Bank of Poland's policy.

### ✓ Czech retail sales may disappoint but consumer sentiment remains strong

While the PMI is likely to remain close to its May level, retail sales might slightly disappoint. While the number of working days in year-on-year terms were the same, the distribution of two public holidays differed. This year's holidays were on a Tuesday instead of last year's Monday. The Tuesday holiday will have motivated prolonged weekend breaks that could cause slightly weaker sales in year-on-year terms. Still, consumer confidence hit an historical high in May so consumer sentiment remains strong.

## Continued deceleration in Hungary

In Hungary, we see the economic activity indicators showing further deceleration. On the one hand, a deceleration in both the industry and the retail sectors would fit the trend. On the other hand, last year's high base will have a lot to do with the weak May readings. We expect the budgetary situation to worsen as there is still no sign that the government stopped the pre-financing of EU projects.

### Turkish inflation on the rise

We expect June inflation to come in at 1% pulling the annual figure up from 12.1% to 13.5%. This is given the intensifying inflationary pressures from the recent Turkish lira depreciation with repercussions on the outlook for core goods, upward pressure from domestic PPI dynamics and unsupportive base effects.

### Romanian central bank to keep the key rate unchanged

We expect the Romanian central bank (NBR) to keep the rate unchanged at 2.5% at the 4 July meeting, mentioning the need to assess the outlook better after more than 200bp in the tightening of lending rates in less than one year, despite CPI recently surprising to the upside. Nevertheless, with money market rates much higher than the key rate and with the Romanian leu under weakening pressure, we see a material chance (around 30%) of a 25bp hike.
