✓ UK MPs in race against the clock as Parliament suspension looms

British lawmakers will have to hit the ground running when they return to the House of Commons on Tuesday. MPs will have just five sitting days to put the wheels in motion to try and stop a 'no deal' exit on 31 October, before Parliament is suspended until 14 October.

There is talk that MPs may try to convene over the weekend of 7/8 September – something that has only happened a handful of times since World War II. Even so, the chances of a successful early strike by lawmakers seem low as things stand. Most MPs who are opposed to 'no deal' would prefer to legislate to force Prime Minister Boris Johnson to ask for another Article 50 extension. But the UK leader's decision to suspend Parliament makes an already difficult task much harder, and press reports suggest the government is considering [other radical measures](#) to disrupt legislative efforts further if necessary.

If legislative attempts fail, opposition MPs may be left with little choice but to back a motion of no-confidence if they want to stop a 'no deal' Brexit. But given that the government is still officially targeting a deal with the EU, some lawmakers may be reluctant to back such a motion this early on. In the end though, if the government either fails to bring a revamped deal back from the EU, or cannot gain enough support from Parliament, then this route may ultimately gain traction among

lawmakers. One thing looks increasingly assured – all of this may well go down to the wire in the final weeks of October.

Bank of Canada on hold with some dovish twist

The Canadian economy has been performing very well of late, rebounding from commodity and trade-related weakness in late 2018/early 2019. As such the Bank of Canada has so far not felt the need to follow the crowd of other central banks signalling dovish intentions. However, the latest escalation in trade tensions, plus the global slowdown and softening tone to US data suggests momentum may start to slow. The Canadian economy is relatively open and is dependent on commodities for a significant proportion of its output so we suspect the BoC may lay the groundwork for a potential rate cut in 4Q19.

Swedish Riksbank set to lower rate profile amid global uncertainty

In times gone by, the prospect of European Central Bank easing would see the Swedish Riksbank swiftly follow suit. But this time, things look different – in particular, the Swedish krona has weakened substantially, and according to our FX team, has further to run. That said, we could see the Riksbank lower its rate profile once again at next week's meeting.

Global growth risks are mounting, while next year's crucial wage negotiation round in early 2020 may end with a fairly subdued result. So while the Riksbank's forecasts may still point to rate hikes in the future (albeit a little later), we think these are unlikely to materialise. That said, it also seems too early to be talking about rate cuts in Sweden.

Key events in EMEA and Latam next week

Russia's central bank meets next week and we expect a rate cut as a result of shrinking inflation. There will also be some key releases from the Czech...

Source: Shutterstock

✓ Russia: Low inflation to trigger rate cut

We expect the Central Bank of Russia (CBR) to lower its key rate by another 25 basis points to 7.00% on 6 September, as local inflation keeps decelerating and is likely to underperform our 4.5% year-on-year forecast in August. The CBR is also likely to cut its year-end CPI expectations from 4.2-4.7% towards our 4.0% forecast. At the same time, we expect the CBR's rhetoric to be less dovish to account for the deterioration of global market sentiment, which has already contributed to rouble weakness and may hamper improvement in the inflation expectations of households and corporates.

✓ Turkey: Inflation and growth down

Following a temporary increase in July, we expect annual inflation to resume its downtrend and fall to 15.3% (1.2% month-on-month) in August amid a supportive base effect and lower energy prices, despite administrative price adjustments. Inflation will drop very rapidly in September and reverse thereafter because of large base effects.

Regarding GDP growth, the second quarter will likely be another weak period for consumption, although the contribution from net exports should remain solid. Accordingly, we expect 2Q growth

to be -1.6% on a YoY basis, shifting the policy mix towards further loosening. This is supported by an improving global, geopolitical and political backdrop, which should contribute to a recovery in the second half of the year.

Hungary: Busy week and mixed feelings

The first set of data for the third quarter will be revealed next week. Retail sales figures might be affected by an increased savings rate due to the start of a new retail bond, but we still see a sound performance. The biggest question mark is related to industrial production. On the one hand, summer holidays can be a drag on production but overall, the number of working days was unusually high in July, offering a silver lining. Overall, we see a monthly drop in production but an even worse performance a year ago provides a really low base. However, some rebound might come in the next month, as we call for an improving PMI in August.

Czech Republic: July industry hot from summer

While the August Manufacturing PMI is likely to remain close to the previous print, below 45 points, July industry should be strong, affected by traditional summer month volatility. As the preliminary data suggests, the number of manufactured cars increased by more than 30% YoY due to the very low base from last year, affected by holiday shutdowns. As such, value-added of summer statistics is very limited again. Wages for the second quarter should remain strong and keep growing above 7% YoY, given the overheated domestic labour market, which reacts to the global slowdown with a traditional delay.

Asia week ahead: Are we at the end of it?

The Asian economic calendar is packed with the usual start-of-the-month releases on trade, manufacturing, and inflation. But the trade war will remain the...

Source: Shutterstock

➔ Are we at the end of it? Not yet...

First of all, let's hope for no more escalation of the US-China trade rhetoric over the coming weekend even as a portion of new US tariffs on Chinese products takes effect on Sunday, 1 September. On a positive note, China's Commerce Ministry has just ruled out an immediate retaliation to last weekend's US tariff increase.

China has ample means for retaliation but thinks the question that should be discussed now is about removing the new tariffs to

prevent escalation. - Ministry of Commerce spokesman Gao Feng

Absent additional trade bashing, the focus should return to where we are in terms of the real impact so far. China's purchasing managers index (PMI) and Korea's export growth, the first August releases from the region due over the coming weekend, may provide some insight. While we anticipate no departure from the recent trend of weak exports depressing manufacturing, at least the trend doesn't seem to have got any worse either. Nor has it bottomed.

The recent escalation of the tariff war provides no hopes of a near-term trade deal. As such, we are in for a long stretch of slow growth and increasingly challenging policy environment, as some central bankers have warned.

RBA policy meeting – a non-event

The Reserve Bank of Australia's Governor Philip Lowe has recently pointed to policy challenges as "political shocks are turning into economic shocks" and argued about government stimulus as more impactful than cutting interest rates, which risks pushing up asset prices.

This suggests the RBA meeting next week will likely pass as a non-event, while Australia's GDP growth has continued to slow (2Q GDP data is due next week). We, in line with consensus, expect no change to the 1.0% RBA policy rate, and a slowdown in GDP growth to 1.5% year-on-year from 1.8% in 1Q. However, continued negative capex growth in 2Q imparts a downside risk to our growth view. That said, we expect the RBA policy pause to continue until the end of the year.

More good news for BSP's easing, not for BI's

Meanwhile, the August inflation releases in Indonesia and the Philippines will inform on central bank policy paths in these countries. The consensus view of a sharp fall in inflation below 2% (to 1.8% from 2.4% in July – the lowest in three years) would delight the Bangko Sentral ng Pilipinas (Philippines central bank) looking to cut rates further.

In Indonesia, we see inflation ticking up in August (to 3.5% from 3.2%), supporting our view of no more rate cuts from Bank Indonesia for the rest of the year.
