

Aluminium: China October trade snapshot

China's strong imports in aluminium-related raw materials, notably bauxite and alumina, continued in the second half. Unusually, primary and alloys together hit record levels. Exports of semi-finished products remain under pressure

October bauxite imports fell by 4% month-on-month. In the first 10 months, they grew by 14% YoY to around 96mln tonnes. Alumina imports also saw a small dip last month at 174kt. Still, total imports year-to-date have grown by 205% YoY to 3.1mln tonnes reflecting both improved supply overseas and robust Chinese demand as a result of stronger aluminium production.

Primary aluminium imports cooled from the prior month but remained elevated. October imports fell by 35% MoM to 112kt. Total imports have jumped to 878kt in the first 10 months, 14 times higher than the same period of last year, with over 30% coming from Russia followed by India with around 28%.

Meanwhile, aluminium scrap imports have declined by almost 48% YoY to 680kt (physical weight) during Jan-Oct. As China customs released their new HS code (7602000020) on 19 October for updated import standards, scrap imports by China should go up once market players have adapted to the new policy. To partially compensate for the reduced scrap imports, China has been importing more unwrought aluminium alloys that are likely to be secondary ingots. Total imports under this category have grown to over one million year-to-date, compared to only 216kt in the full year 2019.

Exports on aggregated aluminium semi-finished products have contracted by 20% YoY to around 3.5mIn tonnes (the decline is the same on an annualised basis). However, aluminium bearing products, including door and window frames, have recorded a moderate gain (+0.9% YoY) in the first 10 months. There have also been strong exports in stranded aluminium cables and household aluminium products.
