

## Indonesia: Current Account stress from weak December exports

Any downside growth surprise from exports in December would lead to a less favorable current account deficit expectation

Source: istock

# 6.9%

December export growth

disappointing export performance

Worse than expected

### Downside growth surprise from exports

Any downside growth surprise from exports in December would lead to a less favorable current account deficit expectation. December import growth of 17.8% was roughly in line with the market forecast of 18.1%. Weak exports and relatively strong imports resulted to the second monthly deficit in 2017, at -\$271m in December, a reversal of the \$1.1bn surplus in December 2016. December exports were up 6.9% YoY, only half the market forecast. Non-oil exports were a major disappointment, posting only a 5.6% YoY increase, a third of the 11M average growth of 18% and

below our forecast of 15%. Possibly slower demand and negative base effects resulted to the weakness. Import growth on the other hand resulted from 50% YoY growth in oil and gas imports and a 13% YoY increase in non-oil imports. Non-oil import growth was slower than the 11M average growth of 15.6%.

## **Current account deficit for 4Q forecast likely to be larger than 4Q16**

The 4Q17 current account deficit could reach \$4bn with a significantly lower trade surplus of just \$945m -30% of the trade surplus of \$3.1bn in 4Q16. We had earlier expected a current account deficit of only \$3bn on a trade surplus of \$2.2bn. The revised current account deficit forecast of \$4bn is equivalent to 1.7% of GDP. The full year 2017 current account deficit would likely amount to \$15.5bn or 1.5% of GDP. Bank Indonesia, Indonesia's central bank, expects the 2017 current account deficit to be below 2% of GDP. We expect export growth in 2018 to slightly outpace import growth, resulting to a trade surplus of \$14.5bn and a current account deficit of \$18bn or 1.6% of GDP.
