

Turkey: Current account widened rapidly in July

The capital account was weak, driven by debt-creating non-resident flows while net errors and omissions remained robust, reaching an all-time high on a monthly and 12-month rolling basis.

With a higher than expected deficit in July at US\$-4.0bn, the 12-month rolling current account has

rapidly widened to US\$-36.6bn, the highest since early 2021, (translating to c. 4.5% of GDP), from US\$-32.9bn in June.

On a monthly basis, we saw i) the impact of the usual drivers, the energy deficit, almost doubling in comparison to the same month last year, ii) accelerating net gold imports at US\$1.3bn, the highest monthly reading since end-2020 and iii) a larger core trade (excluding gold and energy) deficit. Strength in services income amid continuing rapid growth in tourism and transportation revenues limited the plunge in the current account.

Current account (12M rolling, US\$bn)

The capital account has remained weak at US\$3.0bn, driven by debt-creating non-resident flows despite continuing resident outflows. With the c/a deficit and high net errors & omissions at US\$5.5bn (US\$21.3bn on a 12M rolling basis), official reserves recorded a US\$4.4bn increase in July alone.

In the breakdown of monthly flows, residents increased their external assets by US\$2.9bn mainly due to trade credits extended by local firms and financial asset acquisitions. For the non-residents, we saw US\$5.9bn of inflows, exceeding the outflows on the resident side. Non-resident moves were mainly attributable to debt-creating flows, namely i) US\$0.8bn of trade credits ii) US\$2.2bn of deposits placed by foreign investors to Turkish banks and the Central Bank and iii) a cumulative US\$3.5bn of net borrowing by corporates, while banks remained on the paying side by reducing their external debt by US\$0.8bn. Accordingly, we saw a jump in the long-term debt rollover rate for corporates to 515% (a healthy 178% on a 12M rolling basis), while the same ratio for banks stood at 46% (89% on a 12M rolling basis). On the flip side, among non-debt-creating flows, US\$0.7bn of gross FDI turned out to be the major driver, with real estate contributing to related inflows.

Breakdown of financing (monthly, US\$bn)

The current account deficit has been on a rapid expansionary path since early this year, driven by commodity imports and a particularly high energy bill, and the latest indicators suggest that this trend will likely continue in August with an across-the-board deterioration in foreign trade. Despite i) the supportive impact of ongoing strength in tourism revenues and ii) expected momentum loss in core imports with slower lending and domestic demand, the current account will likely remain under pressure in the near term as oil prices are elevated and the eurozone - as Turkey's major trade partner - faces significant pressure in its growth outlook. On the financing side, we see an increasing reliance on unidentified flows and reserves while the global backdrop turning less supportive in recent months also adds challenges given high external financing requirements.
